

UNDERSTANDING THE ECONOMY: STATE-BY-STATE SNAPSHOTS

A REPORT BY THE JOINT ECONOMIC COMMITTEE
SENATOR BOB CASEY, CHAIRMAN

Executive Summary

This is the tenth edition of state-by-state snapshots issued by the Joint Economic Committee during the 112th Congress and includes data through September 2011.

This month's report shows that while the pace of private-sector job growth increased at the national level in September, fewer than half of the states saw an increase in private-sector employment during the month. Nationally, 137,000 private-sector positions were added in September compared to a gain of 42,000 private-sector jobs in August. Although 95,000 more private-sector jobs were added in September than August, the number of states adding private-sector positions was the same both months (22 states in September and 22 states and the District of Columbia in August).

Economic activity in the manufacturing sector continued to expand in September. September's ISM reading of 51.6 percent was a one percentage point increase from August and marked the 26th consecutive month of expansion in the manufacturing sector. The ISM reading was consistent with data released by the Federal Reserve Board which showed industrial production increasing by 0.2 percent in September and manufacturing output growing by 0.4 percent. In addition, retail sales, a closely-followed indicator of consumer health, rose by 1.1 percent in September, following a 0.3 percent gain in August.

Against this national backdrop, this report highlights progress at the state level in creating private-sector jobs and reducing unemployment and tracks the employment gains in key sectors, including manufacturing and professional and business services.

Report highlights include:

- Twenty-two states added private-sector jobs in September. Texas led the way with 26,500 new private-sector positions, followed by Florida (24,300) and California (18,800). These 3 states accounted for just over half of all the private-sector gains in September. In the past 12 months, 11 states (Texas, California, Florida, New York, Ohio, Michigan, Pennsylvania, Illinois, Arizona, Washington and Massachusetts) have each added more than 50,000 private-sector jobs. Only Delaware and Georgia lost private-sector positions over the past year. From September 2010 - September 2011, North Dakota (6.7 percent), Utah (3.8 percent) and Texas (3.3 percent) had the largest percentage gains in private-sector employment.

- Twenty-five states saw their unemployment rates decline in September, with three of those states recording statistically significant declines. Minnesota had the largest decrease (-0.3 percentage point) and California and Idaho each experienced declines of -0.2 percentage point. All other states and the District of Columbia did not have changes in the unemployment rate that were statistically significant in September. In the past 12 months, New Mexico (-2.0 percentage points), Florida and Oregon (-1.1 percentage points each) and Massachusetts (-1.0 percentage point) had statistically significant decreases while the District of Columbia (+1.4 percentage points) recorded the only significant increase. Nevada (13.4 percent) and California (11.9 percent) had the highest unemployment rates in September. The national unemployment rate during the month was 9.1 percent.
- Manufacturing employment expanded in 18 states in September. The largest gains were in Indiana, which added 1,600 manufacturing jobs, followed by Georgia and Washington (each with 1,200). Despite losing 13,000 manufacturing jobs in September, the United States has added 196,000 manufacturing jobs in the past twelve months. Nine states – Texas (18,500), Michigan (17,700), California (15,800), Pennsylvania (12,900), Wisconsin (12,700), Oklahoma (11,400), Illinois (11,300), Missouri (10,800) and Washington (10,000) – have each added at least 10,000 manufacturing positions during the past year.
- Twenty-two states and the District of Columbia added jobs in the professional and business services sector in September. Texas (18,400), California (13,300) and Indiana (6,600) posted the largest increases. In the past year, 43 states and the District of Columbia have added professional and business services jobs, with California, Texas and New York recording the largest gains. In total, 561,000 jobs in the professional and business services sector have been added in the past 12 months.
- Nineteen states added jobs in the leisure and hospitality sector during September. Florida (10,500), New York (5,400) and California (4,700) saw the largest gains. In the past 12 months, 39 states have added leisure and hospitality jobs. During this period, 120,000 leisure and hospitality jobs have been added.

Economic Overview And Outlook: Alabama

JOBS

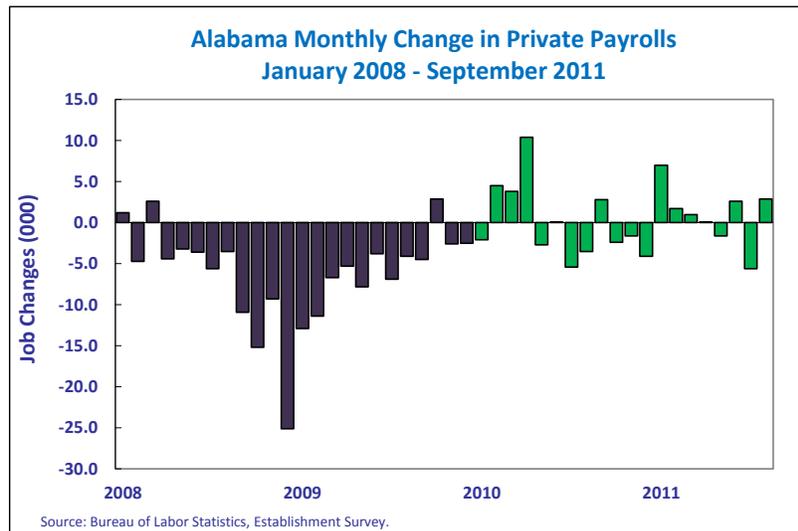

- Including September, the private sector has gained jobs nationwide for 19 consecutive months.
- In Alabama, private sector employment fell by 9.4 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 1.3 percent.
- In Alabama, employees in the construction, professional and business services, and information services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Alabama have experienced the greatest employment increases: professional and business services; trade, transportation and utilities; and education and health services.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Alabama was 9.8 percent in September 2011, up 6.0 percentage points from December 2007, but down from its most recent peak of 10.4 percent in December 2009.
- 211,000 Alabama residents were counted among the unemployed in Alabama during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Alabama was \$30,491.30 in the 2nd quarter of 2011, up from \$30,262.60 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In Alabama, home prices saw a decrease of 4.9 percent in August 2011 from August 2010 following July's year over year decrease of 4.1 percent.
- The median price of single-family homes in Alabama was \$128,969 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 2.0 percent of all mortgages, including 7.0 percent of subprime mortgages, were in foreclosure in Alabama.
- Housing starts in Alabama totaled 8,280 units (seasonally adjusted annual rate) in August 2011, a decrease of 14.7 percent from July.
- Within the South census region, which includes Alabama, sales of new single-family homes totaled 164,000 units in August 2011, a decrease of 2.4 percent from July. Sales of existing single-family homes decreased 3.4 percent to 1,700,000 units (at seasonally adjusted annual rates) from August to September 2011.

How Does Alabama Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Alabama to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Alabama since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Alabama.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

STATE QUICK FACTS

		Alabama	United States
Unemployment Rates	September 2008	5.5%	6.2%

Economic Overview And Outlook: Colorado

JOBS

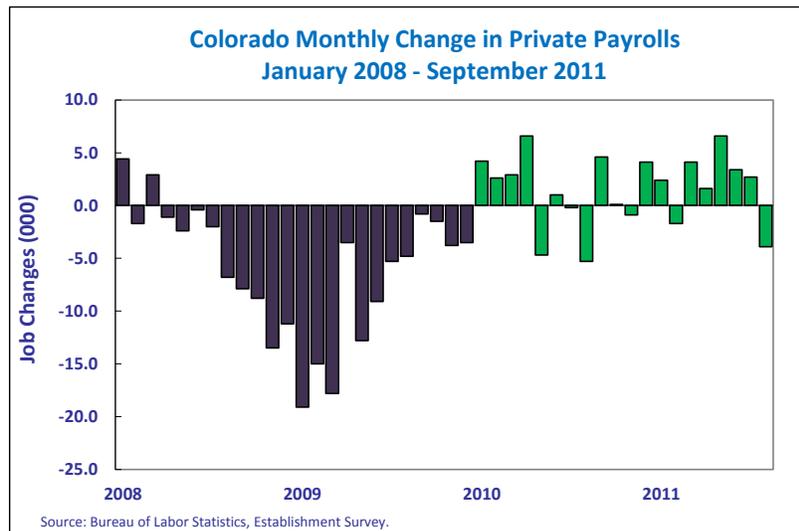

- Including September, the private sector has gained jobs nationwide for 19 consecutive months.
- In Colorado, private sector employment fell by 7.8 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 1.6 percent.
- In Colorado, employees in the construction, manufacturing, and mining sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Colorado have experienced the greatest employment increases: mining; leisure and hospitality; and education and health services.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Colorado was 8.3 percent in September 2011, up 4.3 percentage points from December 2007, but down from its most recent peak of 9.3 percent in February 2011.
- 222,000 Colorado residents were counted among the unemployed in Colorado during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Colorado was \$38,741.30 in the 2nd quarter of 2011, up from \$38,096.10 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In Colorado, home prices saw a decrease of 1.8 percent in August 2011 from August 2010 following July's year over year decrease of 2.5 percent.
- The median price of single-family homes in Colorado was \$217,558 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 2.1 percent of all mortgages, including 8.1 percent of subprime mortgages, were in foreclosure in Colorado.
- Housing starts in Colorado totaled 16,640 units (seasonally adjusted annual rate) in August 2011, a decrease of 12.2 percent from July.
- Within the West census region, which includes Colorado, sales of new single-family homes totaled 59,000 units in August 2011, a decrease of 6.3 percent from July. Sales of existing single-family homes decreased 7.9 percent to 1,050,000 units (at seasonally adjusted annual rates) from August to September 2011.

How Does Colorado Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Colorado to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Colorado since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Colorado.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

Economic Overview And Outlook: Hawaii

JOBS

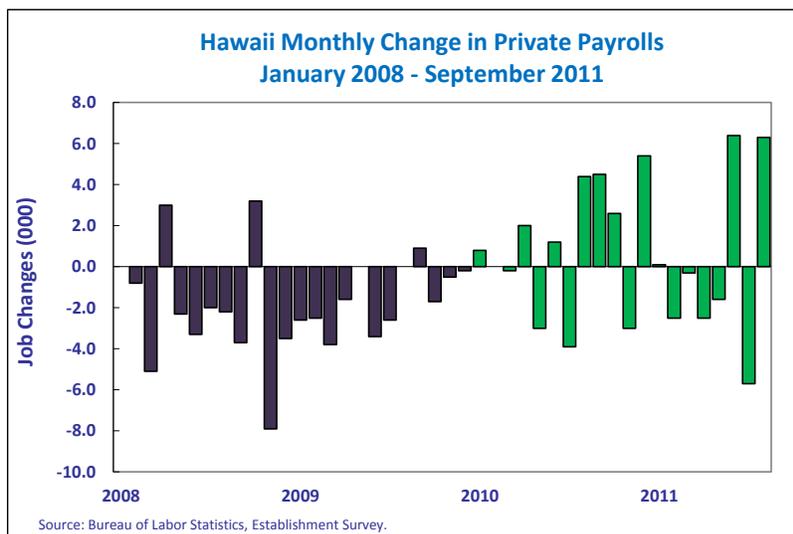

- Including September, the private sector has gained jobs nationwide for 19 consecutive months.
- In Hawaii, private sector employment fell by 8.3 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 2.1 percent.
- In Hawaii, employees in the construction, trade, transportation and utilities, and leisure and hospitality sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Hawaii have experienced the greatest employment increases: professional and business services; education and health services; and leisure and hospitality.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Hawaii was 6.4 percent in September 2011, up 3.4 percentage points from December 2007, but down from its most recent peak of 7.0 percent in November 2009.
- 40,000 Hawaii residents were counted among the unemployed in Hawaii during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Hawaii was \$37,923.90 in the 2nd quarter of 2011, up from \$37,663.20 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In Hawaii, home prices saw an increase of 0.6 percent in August 2011 from August 2010 following no change year over year in July.
- The median price of single-family homes in Hawaii was \$499,837 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 4.3 percent of all mortgages, including 17.9 percent of subprime mortgages, were in foreclosure in Hawaii.
- Housing starts in Hawaii totaled 2,460 units (seasonally adjusted annual rate) in August 2011, an increase of 11.8 percent from July.
- Within the West census region, which includes Hawaii, sales of new single-family homes totaled 59,000 units in August 2011, a decrease of 6.3 percent from July. Sales of existing single-family homes decreased 7.9 percent to 1,050,000 units (at seasonally adjusted annual rates) from August to September 2011.

How Does Hawaii Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Hawaii to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Hawaii since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Hawaii.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

Economic Overview And Outlook: Kentucky

JOBS

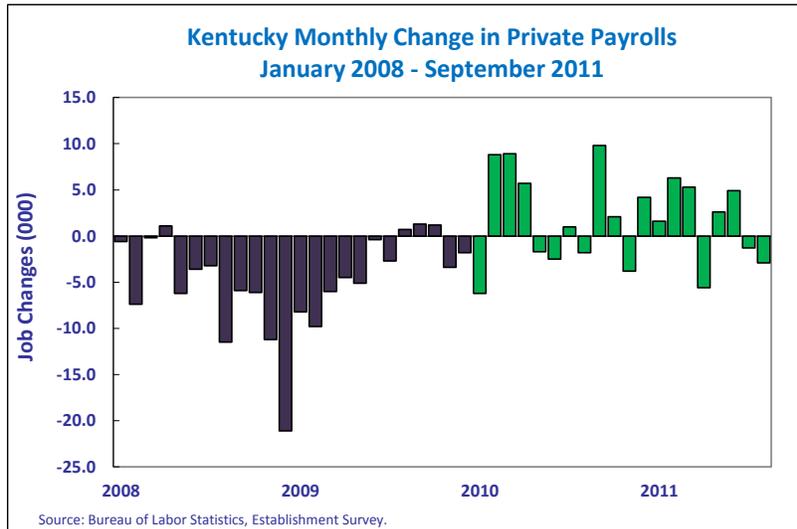

- Including September, the private sector has gained jobs nationwide for 19 consecutive months.
- In Kentucky, private sector employment fell by 8.0 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 3.1 percent.
- In Kentucky, employees in the manufacturing, construction, and information services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Kentucky have experienced the greatest employment increases: professional and business services; leisure and hospitality; and mining.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Kentucky was 9.7 percent in September 2011, up 4.1 percentage points from December 2007, but down from its most recent peak of 11.1 percent in August 2009.
- 203,000 Kentucky residents were counted among the unemployed in Kentucky during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Kentucky was \$29,612.90 in the 2nd quarter of 2011, up from \$29,516.70 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In Kentucky, home prices saw a decrease of 3.2 percent in August 2011 from August 2010 following July's year over year decrease of 3.9 percent.
- The median price of single-family homes in Kentucky was \$130,344 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 3.8 percent of all mortgages, including 12.6 percent of subprime mortgages, were in foreclosure in Kentucky.
- Housing starts in Kentucky totaled 6,670 units (seasonally adjusted annual rate) in August 2011, an increase of 25.4 percent from July.
- Within the South census region, which includes Kentucky, sales of new single-family homes totaled 164,000 units in August 2011, a decrease of 2.4 percent from July. Sales of existing single-family homes decreased 3.4 percent to 1,700,000 units (at seasonally adjusted annual rates) from August to September 2011.

How Does Kentucky Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Kentucky to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Kentucky since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Kentucky.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

JOBS

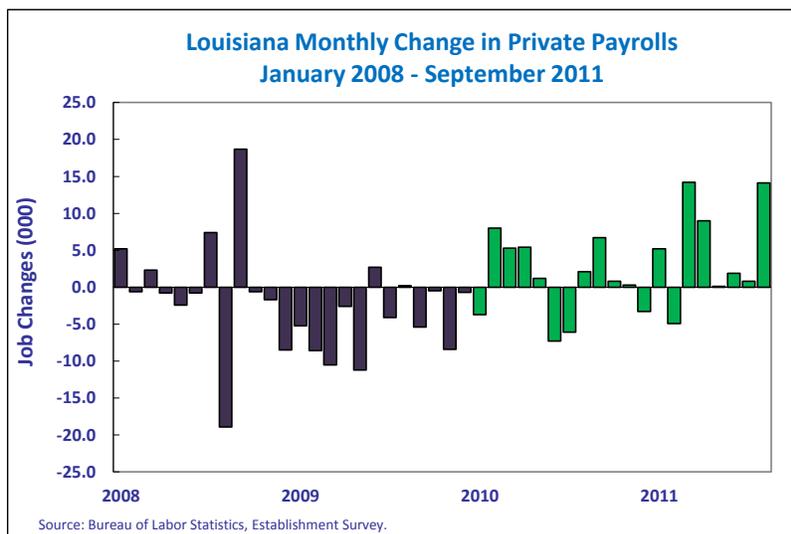

- Including September, the private sector has gained jobs nationwide for 19 consecutive months.
- In Minnesota, private sector employment fell by 6.2 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 2.2 percent.
- In Minnesota, employees in the mining, construction, and manufacturing sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Minnesota have experienced the greatest employment increases: mining; professional and business services; and manufacturing.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Minnesota was 6.9 percent in September 2011, up 2.2 percentage points from December 2007, but down from its most recent peak of 8.5 percent in June 2009.
- 205,000 Minnesota residents were counted among the unemployed in Minnesota during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Minnesota was \$39,630.40 in the 2nd quarter of 2011, up from \$38,077.10 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In Minnesota, home prices saw a decrease of 7.8 percent in August 2011 from August 2010 following July's year over year decrease of 8.6 percent.
- The median price of single-family homes in Minnesota was \$164,105 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 2.7 percent of all mortgages, including 11.3 percent of subprime mortgages, were in foreclosure in Minnesota.
- Housing starts in Minnesota totaled 5,570 units (seasonally adjusted annual rate) in August 2011, a decrease of 26.7 percent from July.
- Within the Midwest census region, which includes Minnesota, sales of new single-family homes totaled 53,000 units in August 2011, an increase of 8.2 percent from July. Sales of existing single-family homes decreased 1.0 percent to 1,000,000 units (at seasonally adjusted annual rates) from August to September 2011.

How Does Minnesota Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Minnesota to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Minnesota since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Minnesota.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

STATE QUICK FACTS

How Does New Hampshire Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare New Hampshire to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within New Hampshire since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in New Hampshire.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

- In Ohio, employees in the manufacturing, construction, and professional and business services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in Ohio have experienced the greatest employment increases: professional and business services; education and health services; and mining.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in Ohio was 9.1 percent in September 2011, up 3.4 percentage points from December 2007, but down from its most recent peak of 10.6 percent in February 2010.
- 534,000 Ohio residents were counted among the unemployed in Ohio during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Ohio was \$33,278.50 in the 2nd quarter of 2011, up from \$32,385.40 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In Ohio, home prices saw a decrease of 5.3 percent in August 2011 from August 2010 following July's year over year decrease of 6.6 percent.
- The median price of single-family homes in Ohio was \$113,730 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 5.0 percent of all mortgages, including 12.5 percent of subprime mortgages, were in foreclosure in Ohio.
- Housing starts in Ohio totaled 10,380 units (seasonally adjusted annual rate) in August 2011, a decrease of 1.9 percent from July.
- Within the Midwest census region, which includes Ohio, sales of new single-family homes totaled 53,000 units in August 2011, an increase of 8.2 percent from July. Sales of existing single-family homes decreased 1.0 percent to 1,000,000 units (at seasonally adjusted annual rates) from August to September 2011.

How Does Ohio Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Ohio to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Ohio since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Ohio.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

- In South Dakota, employees in the manufacturing, construction, and information services sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in South Dakota have experienced the greatest employment increases: manufacturing; professional and business services; and education and health services.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in South Dakota was 4.6 percent in September 2011, up 1.8 percentage points from December 2007, but down from its most recent peak of 5.2 percent in February 2010.
- 21,000 South Dakota residents were counted among the unemployed in South Dakota during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in South Dakota was \$36,511.80 in the 2nd quarter of 2011, up from \$35,114.40 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In South Dakota, home prices saw an increase of 1.5 percent in August 2011 from August 2010 following July's year over year decrease of 1.2 percent.
- The median price of single-family homes in South Dakota was \$156,243 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 1.7 percent of all mortgages, including 11.5 percent of subprime mortgages, were in foreclosure in South Dakota.
- Housing starts in South Dakota totaled 2,690 units (seasonally adjusted annual rate) in August 2011, an increase of 12.1 percent from July.
- Within the Midwest census region, which includes South Dakota, sales of new single-family homes totaled 53,000 units in August 2011, an increase of 8.2 percent from July. Sales of existing single-family homes decreased 1.0 percent to 1,000,000 units (at seasonally adjusted annual rates) from August to September 2011.

How Does South Dakota Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states still remains below pre-recession levels. The chart below allows you to compare South Dakota to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within South Dakota since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in South Dakota.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

EMPLOYMENT

- The unemployment rate in Washington was 9.1 percent in September 2011, up 4.4 percentage points from December 2007, but down from its most recent peak of 10.0 percent in February 2010.
- 318,000 Washington residents were counted among the unemployed in Washington during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in Washington was \$38,798.90 in the 2nd quarter of 2011, up from \$38,740.10 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In Washington, home prices saw a decrease of 5.6 percent in August 2011 from August 2010 following July's year over year decrease of 6.0 percent.
- The median price of single-family homes in Washington was \$248,555 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 3.0 percent of all mortgages, including 12.9 percent of subprime mortgages, were in foreclosure in Washington.
- Housing starts in Washington totaled 26,130 units (seasonally adjusted annual rate) in August 2011, an increase of 19.2 percent from July.
- Within the West census region, which includes Washington, sales of new single-family homes totaled 59,000 units in August 2011, a decrease of 6.3 percent from July. Sales of existing single-family homes decreased 7.9 percent to 1,050,000 units (at seasonally adjusted annual rates) from August to September 2011.

How Does Washington Compare To Other States?

Workers across the country were hard hit during the Great Recession. Although labor markets in many states have started recovering, employment in most states still remains below pre-recession levels. The chart below allows you to compare Washington to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Washington since the start of the recession (shown along the vertical axis) measures the toll the recession took on the job supply in Washington.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates job losses (or even gains) lower than the national average.

Economic Overview And Outlook: West Virginia

JOBS

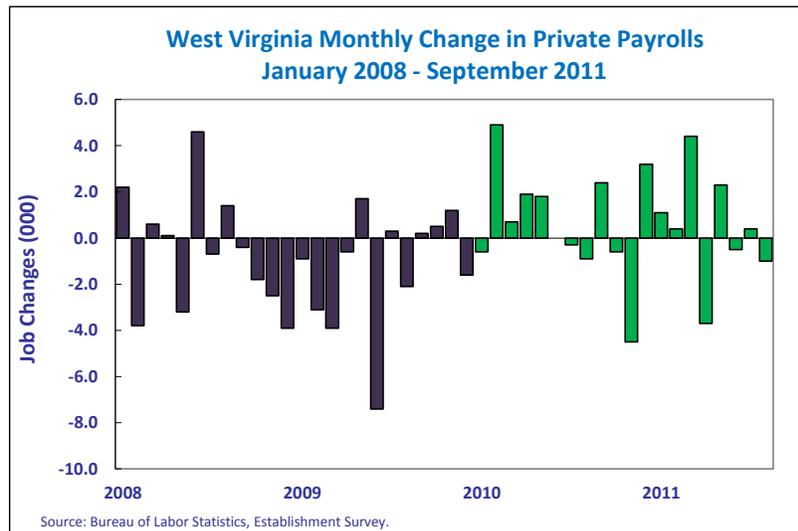

- Including September, the private sector has gained jobs nationwide for 19 consecutive months.
- In West Virginia, private sector employment fell by 4.7 percent from January 2008 to February 2010. Since February 2010, private sector employment has grown by 2.3 percent.
- In West Virginia, employees in the manufacturing, construction, and trade, transportation and utilities sectors faced the largest job losses (as a percent of employment within an industry) over the recession. Since the beginning of 2010, the following sectors in West Virginia have experienced the greatest employment increases: mining; professional and business services; and education and health services.*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

EMPLOYMENT

- The unemployment rate in West Virginia was 8.2 percent in September 2011, up 4.1 percentage points from December 2007, but down from its most recent peak of 9.7 percent in December 2010.
- 64,000 West Virginia residents were counted among the unemployed in West Virginia during September 2011.

EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 3rd quarter of 2009, inflation-adjusted total personal income in the United States declined 4.6 percent. Most recently, in the 2nd quarter of 2011, total personal income is 0.6 percent above its 4th quarter of 2007 level.

- Real per capita personal income (in 2005 \$) in West Virginia was \$29,213.80 in the 2nd quarter of 2011, up from \$28,722.50 in the 2nd quarter of 2009.

HOUSING

- National home prices, including distressed sales, saw a decrease of 4.4 percent in August 2011 from August 2010 compared to a 4.8 percent decrease in July. In West Virginia, home prices saw a significant improvement of 8.6 percent in August 2011 from August 2010 following July's year over year significant increase of 7.8 percent.
- The median price of single-family homes in West Virginia was \$129,369 in the second quarter of 2010, compared to \$180,176 nationwide.
- As of the 2nd quarter of 2011, 2.0 percent of all mortgages, including 7.1 percent of subprime mortgages, were in foreclosure in West Virginia.
- Housing starts in West Virginia totaled 1,620 units (seasonally adjusted annual rate) in August 2011, a decrease of 23.2 percent from July.
- Within the South census region, which includes West Virginia, sales of new single-family homes totaled 164,000 units in August 2011, a decrease of 2.4 percent from July. Sales of existing single-family homes decreased 3.4 percent to 1,700,000 units (at seasonally adjusted annual rates) from August to September 2011.

EXPLANATION OF NET JOB LOSS AND UNEMPLOYMENT RATE CHART

The chart on the following page shows a comparison of the current (September 2011) unemployment rate and cumulative nonfarm job losses (as a percent of total employment) in each state and the District of Columbia versus the national average. States that appear in the upper right quadrant are experiencing unemployment rates higher than the national average and cumulative job losses greater than the national average. Most of these states were dependent on manufacturing and construction. States in the lower left quadrant are experiencing lower unemployment rates and smaller job losses than the national average.

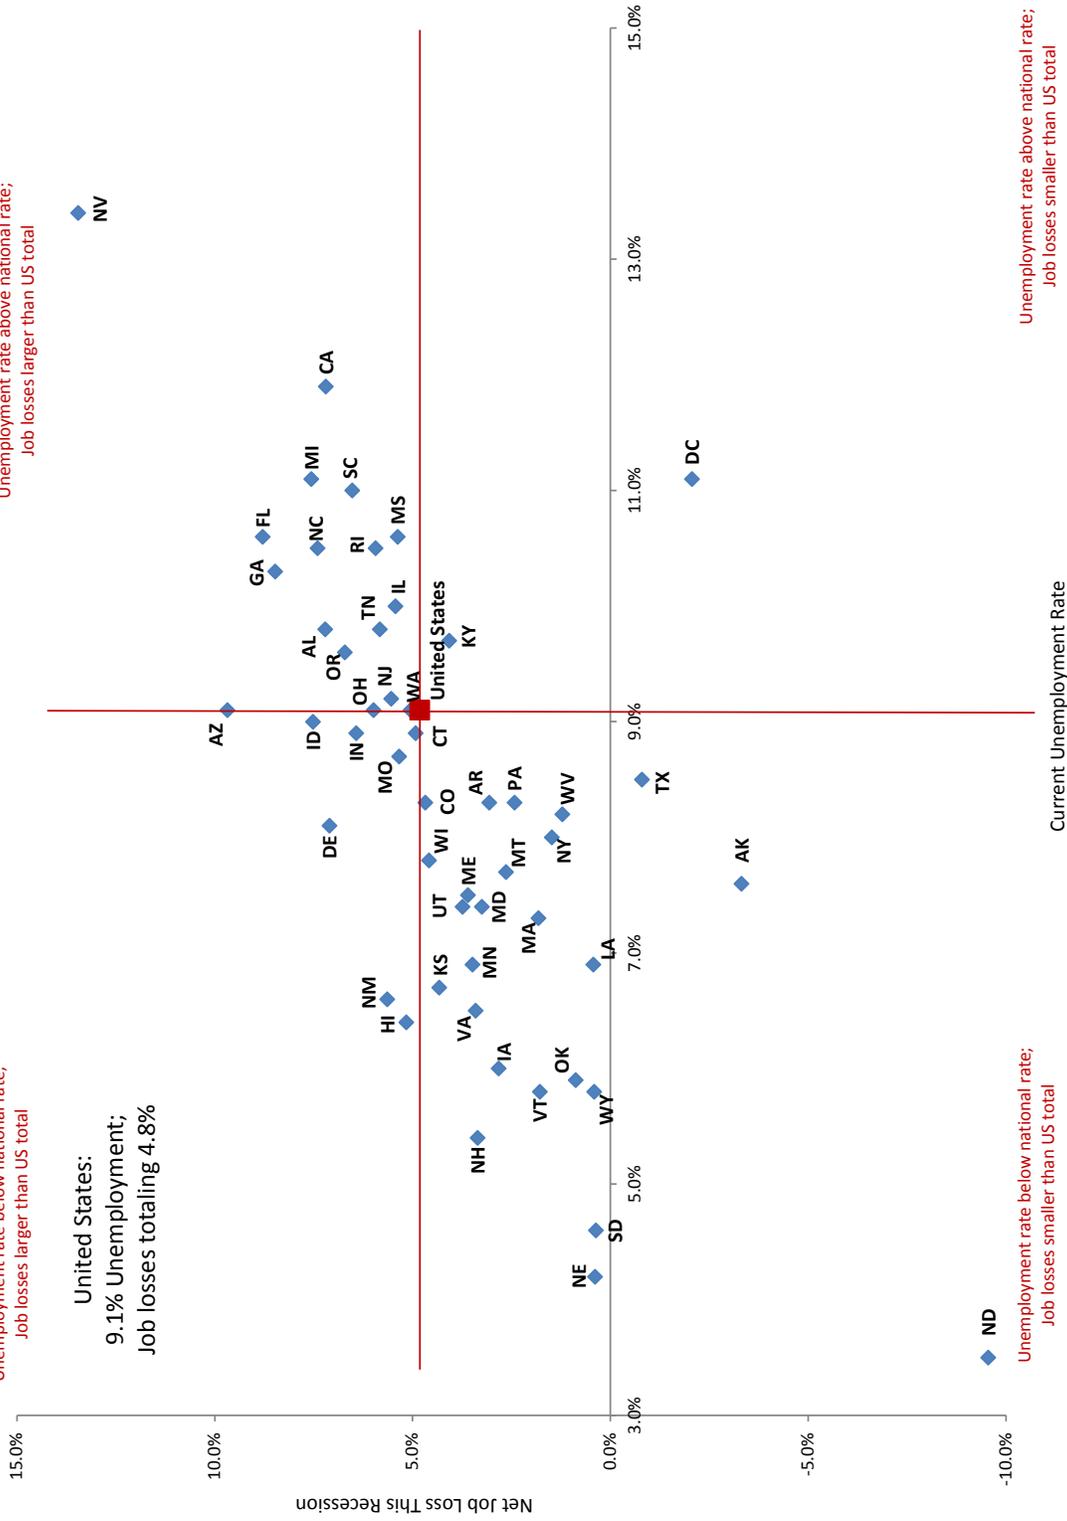

States in the upper left quadrant experienced net job losses greater than the national average but have a current unemployment rate lower than the national average. Those states all started the recession with unemployment rates less than the national average.

Negative job losses correspond to job creation. North Dakota, Alaska, Texas, and the District of Columbia have experienced net job creation since the recession's onset. Expanded employment in the mining and logging sector has contributed to job creation in North Dakota, Alaska, and Texas. In addition, Alaska, Texas, and the District of Columbia have experienced gains in both the education and health services sector and the leisure and hospitality sector since the recession began. Despite these job gains, the unemployment rate in the District of Columbia is currently higher than the national average. The higher unemployment rate in District of Columbia is partly due to a higher unemployment rate before the recession began – the unemployment rate was 5.7 percent in November 2007, above the national average of 4.7 percent. It is likely, given the small size of the District of Columbia, that jobs created in the District of Columbia are filled by Virginia and Maryland residents.

Net Job Loss from Recession's Onset and September 2011 Unemployment Rate

Unemployment rate above national rate;
Job losses larger than US total

United States:
9.1% Unemployment;
Job losses totaling 4.8%

Unemployment rate above national rate;
Job losses larger than US total

Unemployment rate below national rate;
Job losses smaller than US total

Current Unemployment Rate
