How Does Utah Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Utah to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Utah over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Utah.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have both lower unemployment rates and lower job losses (or even gains) than the national average.
