

# Joint Economic Committee HAWAII ECONOMIC SNAPSHOT

Senator Charles E. Schumer, Chairman  
Congresswoman Carolyn B. Maloney, Vice Chair

March 12, 2008

Over the past seven years, the Bush economy has made it more difficult for most Americans to get ahead. Under the current Administration, the basic goals of the American dream – raising a family, owning a home, paying for college, saving for retirement – have become intimidating hurdles for hardworking people. Slow growth in families' wages has been compounded by double-digit cost increases for health care, energy, and college tuition. Democrats are fighting for a new direction in economic policy, aimed at restoring broad-based growth, reducing the high costs of health care and energy, improving retirement security, and increasing prosperity for all Americans.

## **REAL HOUSEHOLD INCOME HAS STAGNATED; JOB CREATION HAS BEEN ABYSMAL**

**Hawaii's Median Household Income Increased By Only 6.9 Percent Since 2000.** In Hawaii, real median household income averaged \$61,005 over the 2005-2006 period, compared with \$57,089 over the 1999-2000 period. Despite strong gains in productivity, workers' wages are only marginally higher than they were 25 years ago, and nationally, the inflation-adjusted income of a typical American household fell by \$962, or 2.0 percent, to \$48,201 between 2000 and 2006. [Bureau of the Census, U.S. Department of Commerce, available [here](#). Following Census guidance, this fact sheet compares the two-year average for 1999-2000, the last years of the Clinton administration, to the two-year average for 2005-2006, the most recent two year period for which this data is available, to analyze changes in household income, poverty and health insurance coverage under this Administration. For more information, see the JEC's August 29, 2007 fact sheet on household income, available [here](#). Note: These and all other inflation-adjusted dollar amounts found in this fact sheet are expressed in constant 2006 dollars.]

**Hawaii's Job Growth Under the Current Administration Lags Far Behind Previous Presidents.** The current president is competing with his father for the worst job creation record of any president since Herbert Hoover. Since taking office in January 2001, only 5.6 million jobs have been created, as compared with 21.1 million new jobs created during the Clinton administration at the same point in time. In Hawaii, only 74,700 new jobs have been created since Bush took office—or 890 new jobs per month. In particular, the manufacturing sector has been hit hard by the economy under the current Administration, with payrolls nationwide declining by 3.3 million jobs between January 2001 and January 2008. [Bureau of Labor Statistics, U.S. Department of Labor, available [here](#).]

## **FAMILIES ARE FEELING THE SQUEEZE OF RISING EXPENSES**

**Rising Energy Costs Lead to Higher Gas Prices for Hawaii Residents.** Rising energy costs are making it more difficult for Hawaii families to stretch their household budgets. In March 2001, the average retail price per gallon of gasoline in Hawaii was \$1.78. The average gas price per gallon is \$3.61 as of March 11, 2008. When adjusted for inflation, this represents an increase of 72 percent. [Federal Highway Administration, U.S. Department of Transportation, available [here](#); American Automobile Association, available [here](#). Energy Information Administration, U.S. Department of Energy, available [here](#); Bureau of the Census, U.S. Department of Commerce, available [here](#). Home heating costs are calculated using data taken from the Department of Energy data on regional household heating expenditures, broken down by fuel type, and applying this to data on State-specific usage of each fuel type, provided by the Bureau of the Census, to produce a weighted average per household for each State.]

**Health Care Premiums in Hawaii Are High and Soaring Across the Country.** In 2005, the average inflation-adjusted health care premium for family coverage in Alaska was \$11,918, while the average premium for individual coverage was \$5,254, reflecting the enormous costs of health care across the nation. Nationwide, the inflation-adjusted average monthly premium for family health coverage in the United States rose by 39.7 percent from 2000 to 2005, even as real median household income declined by 2.7 percent over the same period. [Agency for Healthcare Research and Quality, U.S. Department of Health and Human Services, available [here](#).]

**Child Care Costs For Two-Child Families Averaged \$1,181 Per Month in Hawaii.** Child care continues to be a hefty burden on the budgets of Hawaii parents, with inflation-adjusted monthly care for an infant averaging \$697, and monthly care for two children averaging \$1,181. [National Association of Child Care Resource and Referral Agencies, available [here](#).]

## THE HOUSING CRISIS IS ERODING HOME WEALTH, HURTING THE BROADER ECONOMY

**The Subprime Mortgage Crisis Is Impacting All Hawaii Homeowners.** Under the Bush administration's watch, unregulated mortgage originators were given financial incentives to sell risky, unaffordable subprime mortgages to vulnerable borrowers. As these adjustable rate mortgages reset to higher rates, the number of families unable to afford their payments and threatened with foreclosure is skyrocketing. In Hawaii, mortgages in delinquency have increased from 2,050 in the fourth quarter of 2006 to 2,990 in the fourth quarter of 2007. According to a recent report published by the Joint Economic Committee (JEC), the number of subprime foreclosures in Hawaii will total 3,640 between third quarter 2007 and the end of 2009. [Mortgage Bankers Association, JEC October 25<sup>th</sup> Subprime Lending Crisis Report, available [here](#).]

**High Foreclosure Rates Drag Down Neighboring Property Values and Household Wealth.** The mortgage foreclosure crisis will have severe costs for Hawaii homeowners, not only in direct costs, but in its effect on home values and declining property taxes. According to the JEC, subprime mortgage-related foreclosures will cost Hawaii \$931 million over the second half of 2007 through the end of 2009. Nationally, the expected economic costs of forecast foreclosures total nearly \$104 billion. Moreover, these numbers do not include the larger effects that the foreclosure crisis may have on the economy. Home prices, which drove up consumer spending when they rose earlier this decade, are in decline now, and consumers may begin to draw back on spending, negatively impacting GDP growth. [JEC October 25<sup>th</sup> Subprime Lending Crisis Report, available [here](#)]

## THE ECONOMIC COST OF THE IRAQ WAR IS STAGGERING

**The Iraq War Will Cost \$36,900 Per Hawaii Household.** According to the JEC's recent report, the direct and indirect costs of the Iraq War will be massive, especially if the Bush administration continues to keep large numbers of troops there. Even assuming significant force reductions, the cost of the Iraq War will total \$11 billion for Hawaii taxpayers by 2017; the total cost to the country will be an estimated \$2.8 trillion. [JEC November 13<sup>th</sup> Iraq War Cost Report, available [here](#).]

## POVERTY REMAINS PERSISTENTLY HIGH

**In Hawaii, 113,000 Residents Were Living in Poverty Over Last Two Years.** In Hawaii, 113,000 residents were living below the poverty line during the 2005-2006 period. Unfortunately, this problem is not confined to the adult population as 10.3 percent of Hawaii's children are living below the poverty line. Nationally, 12.3 percent of Americans were living in poverty as of 2006. [Bureau of the Census, U.S. Department of Commerce, available [here](#). See the JEC August 29, 2007 Fact Sheet on Poverty, available [here](#).]

## HUGE NUMBERS OF HAWAIIANS ARE UNINSURED

**Over Last Two Years, 110,000 Hawaii Residents Had No Health Insurance.** A significant number of Hawaii residents are living without health insurance. During the 2005-2006 period, an average of 110,000 Hawaii residents—8.7 percent of the state's population—had no health insurance; this was 5,000 less than during the 1999-2000 period. Furthermore, 5.8 percent of Hawaii's children had no health insurance. Across the country, the number of Americans without health insurance totals 47 million, up 8.6 million since the current Administration took office. [Bureau of the Census, U.S. Department of Commerce, available [here](#). See the JEC August 29, 2007 Fact Sheet on Health Insurance Coverage, available [here](#).]
