## Understanding the Economy: State-by-State Snapshots

### EXECUTIVE SUMMARY

This is the seventh edition of the state-by-state snapshots issued by the Joint Economic Committee, containing employment and unemployment data at the state level for the first half of 2010. While the current recovery remains fragile and uneven, as a whole, the economic situation of the country has improved over the past year:

- Although the gross domestic product (GDP) figure for the second quarter of 2010 has not yet been released, the consensus forecast is that the economy grew by approximately 3 percent, which would be the fourth consecutive quarter of growth. In contrast, in the second quarter of 2009 GDP fell, which was the fourth consecutive quarter of economic contraction.
- Private sector employment rose by 593,000 jobs in the first half of 2010, after six consecutive months of job creation. In contrast, employment fell by 3.7 million jobs in the first half of 2009. More recently, private sector private sector employment rose by 83,000 jobs in June, after having fallen by 452,000 jobs in June 2009.

While these numbers suggest that the economy has started to recover, a stronger, sustained level of job creation is needed to reduce the large pool of unemployed workers. The national unemployment rate was 9.5 percent in June 2010, below the peak of 10.1 percent reached in October 2009.

Private sector job creation during the Clinton administration averaged 217,000 jobs each month. However, even with 200,000 jobs created each month, it would take over 3 years to recreate the 8.5 million private sector jobs lost from December 2007 to December 2009, so unemployment rates are likely to remain high for the foreseeable future.

This month, in addition to the state-by-state update, the JEC has prepared a Mid-Year Report, highlighting the progress states have made creating jobs and reducing unemployment since the beginning of the year (see table on Page 3).

Highlights include:

- In thirty-three states and the District of Columbia, the unemployment rate in June 2010 was lower than in December 2009.
- In thirty-nine states and the District of Columbia, the unemployment rate declined over the month of June 2010.<sup>1</sup>
- Thirty-two states and the District of Columbia added private sector jobs in June 2010 and three states – Idaho, Massachusetts and Texas – added private sector jobs each month in the first half of 2010.

---

<sup>1</sup> The decline in the unemployment rate was statistically significant for 19 states and the District of Columbia.

- Half the states added manufacturing jobs in June 2010 and five states – New Hampshire, Florida, Tennessee, Texas and Indiana – have experienced growth in manufacturing employment each month during the first half of 2010.
- Twenty-eight states and the District of Columbia added jobs in the professional and business services sector during June 2010, with two states – Texas and California – gaining jobs in this sector each month in the first half of 2010.

For the United States as a whole, employment has grown in the manufacturing, professional and business services, and leisure and hospitality sectors.<sup>2</sup> One particularly bright spot in recent months is the manufacturing sector. The U.S. manufacturing sector has shown tentative signs of progress in 2010, after unrelenting employment losses starting in February 2007. The manufacturing sector has expanded for six consecutive months, adding a total of 136,000 jobs in the first six months of 2010. The last time that the U.S. saw more than one consecutive month of manufacturing employment gains was between December 2005 and April 2006, when 51,000 jobs were added. The attached table shows how this national progress also shows up at the state level. However, employment in the manufacturing sector remains fragile. June's gain of only 9,000 manufacturing jobs is the smallest employment gain in the first half of 2010, indicating that this sector is still weak.

In addition, in order to provide a clearer picture of economic performance at a more local level, the Joint Economic Committee has prepared a snapshot of the current economic climate within each state. The attached state pages highlight key economic statistics for each state:

- Jobs created or lost since the start of the recession;
- Jobs saved or created by the Recovery Act;
- Unemployment rates;
- Per capita earnings; and,
- The condition of the housing sector.

The reports provide an easy way for state residents to see how their state is currently performing relative to the rest of the United States in terms of the current unemployment rate as well as the magnitude of job losses experienced since the start of the recession.

In response to the severity of the Great Recession, Congress strengthened the safety net for those whose jobs were eliminated during this recession by passing a series of extensions to unemployment benefits. As the recession has continued to take its toll on working families, a number of emergency extensions have been provided to continue this safety net. Congress has signaled its intent to extend the existing tiers of benefits retroactively until November 30, 2010.

While the road to economic recovery remains slow and uneven, it is clear that the swift action taken by Congress and the President in February 2009 brought the economy back from the brink of another Great Depression. The Recovery Act is responsible for restoring economic growth in the second half of 2009, boosting employment, and laying the groundwork for additional job creation and growth. That recovery has continued, with GDP growth of 2.7 percent in the first quarter of 2010. However, high unemployment rates, particularly long-term unemployment rates, suggest that targeted actions are warranted to create jobs and to continue providing a safety net for families hurt by the recession.

---

<sup>2</sup> Employment has also grown in the following sectors: mining and logging; trade, transportation and utilities; education and health services; other; and government.

# U.S. Congress Joint Economic Committee

## Economic Overview And Outlook: Alabama

### JOBS

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Alabama by 42,000 jobs through the 2nd quarter of 2010.
- In Alabama, private sector employment fell by 9.7 percent from December 2007 to December 2009. In 2010 private sector employment was basically unchanged at 0.4 percent.
- In Alabama, employees in the construction, information services, and financial activities sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Alabama experienced the greatest employment increases: leisure and hospitality; government; and construction.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Alabama was 10.3 percent in June 2010, up 6.4 percentage points from December 2007, but down from its most recent peak of 11.1 percent reached in February 2010.
- 216,000 Alabama residents were counted among the unemployed in Alabama during June 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 1st quarter of 2009, inflation-adjusted total personal income in the United States declined 2.5 percent. Most recently, in the 1st quarter of 2010, total personal income remained 2.6 percent below the 4th quarter 2007 peak.

- Real per capita personal income (in 2005 \$) in Alabama was \$30,297.10 in the 1st quarter of 2010, down from \$30,946.00 in the 1st quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a significant improvement of 2.6 percent in April 2010 from April 2009 compared to 2.3 in February. In Alabama, home prices experienced a decrease of 3.5 percent in April 2010 from April 2009 compared with March's year over year decrease of 4.8 percent.
- The median price of single-family homes in Alabama was \$203,500 in 2008, compared to \$250,000 nationwide.
- As of the 1st quarter of 2010, 2.2 percent of all mortgages, including 7.5 percent of subprime mortgages, were in foreclosure in Alabama.
- Housing starts in Alabama totaled 11,930 units (seasonally adjusted annual rate) in May 2010, a decrease of 19.2 percent from April.
- Within the South census region, which includes Alabama, sales of new single-family homes totaled 170,000 units in May 2010, a decrease of 25.4 percent from April. Sales of existing single-family homes remained steady at 1,940,000 units (at seasonally adjusted annual rates) from March to April 2010.

## How Does Alabama Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Alabama to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Alabama over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Alabama.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

### STATE QUICK FACTS

## Economic Overview And Outlook: California

### JOBS

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in California by 357,000 jobs through the 2nd quarter of 2010.
- In California, private sector employment fell by 10.5 percent from December 2007 to December 2009. In 2010 private sector employment was basically unchanged at 0.5 percent.
- In California, employees in the construction, manufacturing, and financial activities sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in California experienced the greatest employment increases: mining; other services; and manufacturing.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in California was 12.3 percent in June 2010, up 6.5 percentage points from December 2007, but down from its most recent peak of 12.6 percent reached in March 2010.
- 2,245,000 California residents were counted among the unemployed in California during June 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 1st quarter of 2009, inflation-adjusted total personal income in the United States declined 2.5 percent. Most recently, in the 1st quarter of 2010, total personal income remained 2.6 percent below the 4th quarter 2007 peak.

- Real per capita personal income (in 2005 \$) in California was \$38,384.50 in the 1st quarter of 2010, down from \$40,463.90 in the 1st quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a significant improvement of 2.6 percent in April 2010 from April 2009 compared to 2.3 in February. In California, home prices experienced saw a significant improvement of 7.3 percent in April 2010 from April 2009 compared with March's year over year significant increase of 6.7 percent.
- The median price of single-family homes in California was \$400,000 in 2008, compared to \$250,000 nationwide.
- As of the 1st quarter of 2010, 5.2 percent of all mortgages, including 16.9 percent of subprime mortgages, were in foreclosure in California.
- Housing starts in California totaled 38,080 units (seasonally adjusted annual rate) in May 2010, an increase of 15.7 percent from April.
- Within the West census region, which includes California, sales of new single-family homes totaled 51,000 units in May 2010, a decrease of 53.2 percent from April. Sales of existing single-family homes increased 5.4 percent to 1,170,000 units (at seasonally adjusted annual rates) from April to May 2010.

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare California to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within California over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in California.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## Economic Overview And Outlook: Colorado

### JOBS

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Colorado by 50,000 jobs through the 2nd quarter of 2010.
- In Colorado, private sector employment fell by 8.0 percent from December 2007 to December 2009. In 2010 private sector employment was basically unchanged at -0.1 percent.
- In Colorado, employees in the construction, manufacturing, and mining sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Colorado experienced the greatest employment increases: education and health services; trade, transportation and utilities; and government.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Colorado was 8.0 percent in June 2010, up 3.7 percentage points from December 2007, but down from its most recent peak of 8.3 percent reached in June 2009.
- 214,000 Colorado residents were counted among the unemployed in Colorado during June 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 1st quarter of 2009, inflation-adjusted total personal income in the United States declined 2.5 percent. Most recently, in the 1st quarter of 2010, total personal income remained 2.6 percent below the 4th quarter 2007 peak.

- Real per capita personal income (in 2005 \$) in Colorado was \$37,177.20 in the 1st quarter of 2010, down from \$39,943.60 in the 1st quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a significant improvement of 2.6 percent in April 2010 from April 2009 compared to 2.3 in February. In Colorado, home prices experienced saw a significant improvement of 3.2 percent in April 2010 from April 2009 compared with March's year over year significant increase of 4.6 percent.
- The median price of single-family homes in Colorado was \$237,400 in 2008, compared to \$250,000 nationwide.
- As of the 1st quarter of 2010, 2.8 percent of all mortgages, including 9.9 percent of subprime mortgages, were in foreclosure in Colorado.
- Housing starts in Colorado totaled 9,810 units (seasonally adjusted annual rate) in May 2010, an increase of 6.9 percent from April.
- Within the West census region, which includes Colorado, sales of new single-family homes totaled 51,000 units in May 2010, a decrease of 53.2 percent from April. Sales of existing single-family homes increased 5.4 percent to 1,170,000 units (at seasonally adjusted annual rates) from April to May 2010.

## How Does Georgia Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Georgia to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Georgia over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Georgia.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

### STATE QUICK FACTS

## Economic Overview And Outlook: Hawaii

### JOBS

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Hawaii by 13,000 jobs through the 2nd quarter of 2010.
- In Hawaii, private sector employment fell by 8.3 percent from December 2007 to December 2009. In 2010 private sector employment was basically unchanged at 0.3 percent.
- In Hawaii, employees in the construction, professional and business services, and trade, transportation and utilities sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Hawaii experienced the greatest employment increases: leisure and hospitality; trade, transportation and utilities; and construction.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Hawaii was 6.3 percent in June 2010, up 3.3 percentage points from December 2007, but down from its most recent peak of 7.0 percent reached in September 2009.
- 40,000 Hawaii residents were counted among the unemployed in Hawaii during June 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 1st quarter of 2009, inflation-adjusted total personal income in the United States declined 2.5 percent. Most recently, in the 1st quarter of 2010, total personal income remained 2.6 percent below the 4th quarter 2007 peak.

- Real per capita personal income (in 2005 \$) in Hawaii was \$38,436.00 in the 1st quarter of 2010, down from \$38,810.30 in the 1st quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a significant improvement of 2.6 percent in April 2010 from April 2009 compared to 2.3 in February. In Hawaii, home prices experienced saw a significant improvement of 13.4 percent in April 2010 from April 2009 compared with March's year over year significant increase of 10.8 percent.
- The median price of single-family homes in Hawaii was \$450,000 in 2008, compared to \$250,000 nationwide.
- As of the 1st quarter of 2010, 4.8 percent of all mortgages, including 20.0 percent of subprime mortgages, were in foreclosure in Hawaii.
- Housing starts in Hawaii totaled 5,520 units (seasonally adjusted annual rate) in May 2010, an increase of 176.0 percent from April.
- Within the West census region, which includes Hawaii, sales of new single-family homes totaled 51,000 units in May 2010, a decrease of 53.2 percent from April. Sales of existing single-family homes increased 5.4 percent to 1,170,000 units (at seasonally adjusted annual rates) from April to May 2010.

## Economic Overview And Outlook: Minnesota

### JOBS

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Minnesota by 60,000 jobs through the 2nd quarter of 2010.
- In Minnesota, private sector employment fell by 6.4 percent from December 2007 to December 2009. In 2010 private sector employment grew 1.0 percent.
- In Minnesota, employees in the construction, mining, and manufacturing sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Minnesota experienced the greatest employment increases: leisure and hospitality; manufacturing; and mining.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Minnesota was 6.8 percent in June 2010, up 2.1 percentage points from December 2007, but down from its most recent peak of 8.4 percent reached in June 2009.
- 202,000 Minnesota residents were counted among the unemployed in Minnesota during June 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 1st quarter of 2009, inflation-adjusted total personal income in the United States declined 2.5 percent. Most recently, in the 1st quarter of 2010, total personal income remained 2.6 percent below the 4th quarter 2007 peak.

- Real per capita personal income (in 2005 \$) in Minnesota was \$37,861.80 in the 1st quarter of 2010, down from \$39,815.40 in the 1st quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a significant improvement of 2.6 percent in April 2010 from April 2009 compared to 2.3 in February. In Minnesota, home prices experienced saw a significant improvement of 2.8 percent in April 2010 from April 2009 compared with March's year over year increase of 1.1 percent.
- The median price of single-family homes in Minnesota was \$229,300 in 2008, compared to \$250,000 nationwide.
- As of the 1st quarter of 2010, 3.3 percent of all mortgages, including 13.9 percent of subprime mortgages, were in foreclosure in Minnesota.
- Housing starts in Minnesota totaled 14,310 units (seasonally adjusted annual rate) in May 2010, an increase of 58.6 percent from April.
- Within the Midwest census region, which includes Minnesota, sales of new single-family homes totaled 51,000 units in May 2010, a decrease of 23.9 percent from April. Sales of existing single-family homes decreased 0.8 percent to 1,210,000 units (at seasonally adjusted annual rates) from April to May 2010.

## How Does Mississippi Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Mississippi to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Mississippi over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Mississippi.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## How Does New Hampshire Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare New Hampshire to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within New Hampshire over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in New Hampshire.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## How Does Ohio Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Ohio to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Ohio over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Ohio.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## How Does South Dakota Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare South Dakota to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within South Dakota over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in South Dakota.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

## Economic Overview And Outlook: Washington

### JOBS

- Across the country, the private sector gained jobs in each month of 2010.
- The President's Council of Economic Advisers estimates that investments made through the Recovery Act have boosted employment in Washington by 67,000 jobs through the 2nd quarter of 2010.
- In Washington, private sector employment fell by 7.9 percent from December 2007 to December 2009. In 2010 private sector employment grew 1.2 percent.
- In Washington, employees in the construction, mining, and manufacturing sectors faced the largest job losses (as a percent of employment within an industry) over the recession. In 2010, the following sectors in Washington experienced the greatest employment increases: education and health services; trade, transportation and utilities; and information services.\*
- As the economy recovers from the Great Recession, service-providing industries are projected to add the most jobs between 2008 and 2018, with the largest gains in professional and business services, education, health care and social assistance, and State and local government. Within the goods-producing sector of the economy, only the construction industry is projected to add jobs above its 2008 level.

### EMPLOYMENT

- The unemployment rate in Washington was 8.9 percent in June 2010, up 4.3 percentage points from December 2007, but down from its most recent peak of 9.5 percent reached in March 2010.
- 316,000 Washington residents were counted among the unemployed in Washington during June 2010.

### EARNINGS

- Between the start of the recession in the 4th quarter of 2007 and the 1st quarter of 2009, inflation-adjusted total personal income in the United States declined 2.5 percent. Most recently, in the 1st quarter of 2010, total personal income remained 2.6 percent below the 4th quarter 2007 peak.

- Real per capita personal income (in 2005 \$) in Washington was \$37,866.30 in the 1st quarter of 2010, down from \$39,481.70 in the 1st quarter of 2008.

### HOUSING

- National home prices, including distressed sales, saw a significant improvement of 2.6 percent in April 2010 from April 2009 compared to 2.3 in February. In Washington, home prices experienced a decrease of 3.7 percent in April 2010 from April 2009 compared with March's year over year decrease of 4.2 percent.
- The median price of single-family homes in Washington was \$329,100 in 2008, compared to \$250,000 nationwide.
- As of the 1st quarter of 2010, 2.3 percent of all mortgages, including 10.7 percent of subprime mortgages, were in foreclosure in Washington.
- Housing starts in Washington totaled 16,730 units (seasonally adjusted annual rate) in May 2010, an increase of 5.0 percent from April.
- Within the West census region, which includes Washington, sales of new single-family homes totaled 51,000 units in May 2010, a decrease of 53.2 percent from April. Sales of existing single-family homes increased 5.4 percent to 1,170,000 units (at seasonally adjusted annual rates) from April to May 2010.

## How Does Washington Compare To Other States?

Workers across the country have been hard hit by the Great Recession. This chart allows you to compare Washington to other states using two metrics.

The current unemployment rate (measured along the horizontal axis) serves as a gauge of current labor market conditions faced by residents, while the proportion of jobs lost within Washington over the course of the recession (shown along the vertical axis) measures the toll the recession has taken on the job supply in Washington.

States falling in the upper right quadrant have lost a disproportionate share of jobs, relative to the total United States, and have unemployment rates higher than the national unemployment rate. States falling in the lower left quadrant have unemployment rates lower than the national average and smaller job losses over the recession.

### EXPLANATION OF NET JOB LOSS AND UNEMPLOYMENT RATE CHART

The chart on the following page shows a comparison of the current (June 2010) unemployment rate and cumulative nonfarm job losses (as a percent of total employment) in each state and the District of Columbia versus the national average. States that appear in the upper right quadrant are experiencing unemployment rates higher than the national average and cumulative job losses greater than the national average. Most of these states were dependent on manufacturing and construction. States in the lower left quadrant are experiencing lower unemployment rates and smaller job losses than the national average.

States in the upper left quadrant experienced net job losses greater than the national average but have a current unemployment rate lower than the national average. Those states all started the recession with unemployment rates less than the national average.

Negative job losses correspond to job creation during the recession, as seen in North Dakota, Alaska and the District of Columbia. North Dakota and Alaska expanded employment in the natural resource and mining sector and education and health services sector during the recession. In addition, both states and the District of Columbia saw gains in government jobs during the recession. These job gains outweighed losses in the other sectors. Despite job gains, the unemployment rate in the District of Columbia is currently higher than the national average. The higher unemployment rate in District of Columbia is partly due to a higher unemployment rate before the recession began – the unemployment rate was 5.7 percent in November 2007, above the national average of 4.7 percent. It is likely, given the small size of the District of Columbia, that jobs created in the District of Columbia are filled by Virginia and Maryland residents.

# Net Job Loss This Recession and June 2010 Unemployment Rate

Unemployment rate above national rate;  
Job losses larger than US total

Unemployment rate below national rate;  
Job losses smaller than US total

United States:  
9.5% Unemployment;  
Job losses totaling 5.4%

Unemployment rate above national rate;  
Job losses smaller than US total

Unemployment rate below national rate;  
Job losses smaller than US total

Current Unemployment Rate

Prepared by the Majority Staff of the Joint Economic Committee
