LETTERS OF TRANSMITTAL

FEBRUARY 25, 1964.

To Members of the Joint Economic Committee:

Transmitted herewith for the use of the Joint Economic Committee and other Members of Congress is a collection of statistical materials and interpretative articles entitled "Annual Economic Indicators for the U.S.S.R." These materials were compiled and the analyses prepared by a group of experts on the Soviet economy. They are made available to the members of the Joint Economic Committee as a continuation of the studies which appeared in December 1962 under the title "Dimensions of Soviet Economic Power."

We are grateful to the Government departments and organizations for the assistance they have furnished the committee and to the individuals who prepared various sections of this volume. The committee is also grateful to the Research Analysis Corp. for permitting staff members to prepare sections of this study.

It is understood, of course, that neither the statistics nor the interpretative materials contained herein necessarily represent the views of the committee or any of its individual members.

PAUL H. DOUGLAS, *Chairman.*

FEBRUARY 24, 1964.

HON. PAUL H. DOUGLAS,
Chairman, Joint Economic Committee,
Congress of the United States,
Washington, D.C.

DEAR MR. CHAIRMAN: Transmitted herewith is a compendium of statistical materials and interpretative articles entitled "Annual Economic Indicators for the U.S.S.R." This volume reflects the continuing interest of the committee in the development of the Soviet economy and in scholarly interpretative work in this field. The statistical materials contained herein are intended as a supplement to the technical and tabular materials to be found in the Joint Economic Committee's publication of December 1962, entitled "Dimensions of Soviet Economic Power." New materials have been included in this volume, specifically in the areas of investment, East-West trade, and input-output data. Most of the materials contained herein are revisions and updatings of materials that appear in "Dimensions;" however, no attempt has been made to reproduce tables from that volume for which revisions are not yet available.

The studies have been prepared at the committee's request by a group of professional experts who have given generously of their time. As in previous committee publications, attempt has been made to present the data in a comparative setting in order to provide perspective on current Soviet economic performance. It is hoped that this

mode of presentation will afford a more meaningful appraisal of the economic capabilities of the U.S.S.R.

The committee is grateful to the Departments of Commerce, Agriculture, and Health, Education, and Welfare, and to the Bureau of the Census for making their specialists available for this project. The committee is also grateful to the Research Analysis Corp. of McLean, Va., for making available for this project the services of Stanley H. Cohn, author of the section of national income accounts, and Vladimir Treml on input-output data.

The committee is similarly grateful for the contributions of James W. Brackett on population; Murray Feshbach on employment and general bibliography; Frances L. Hall and Vera L. Hartman on East-West trade; Oleg Jerschkowsky on Soviet bloc statistics; Seymour M. Rosen on education; and Harry E. Walters on agriculture.

Finally the committee is particularly indebted to Leon M. Herman, senior specialist in Soviet economics of the Legislative Reference Service of the Library of Congress, who in large part is responsible for this study. Mr. Gregory Guroff handled the editorial tasks for the committee staff.

JAMES W. KNOWLES,
Executive Director, Joint Economic Committee.

FOREWORD

The present statistical report on the Soviet economy is designed primarily to bring up to date the basic quantitative data contained in the compendium "Dimensions of Soviet Economic Power" which the Joint Economic Committee published in December 1962. Beyond that, however, the body of tabular material included in the present study is also intended to provide a statistical profile of the Soviet economy in the 1960's.

In connection with a number of the Soviet statistical indicators included in this volume, an attempt has been made to present comparable data for the economy of the United States. In all such cases, appropriate adjustments have been made to align the two sets of indicators as closely as possible, as far as coverage and definition are concerned. Nevertheless, the pitfalls that surround international economic comparisons cannot be wholly circumvented. The best, therefore, that could be said about the comparative statistical data contained in the present compendium is that they are offered in the hope that they may provide the reader with a frame of reference for viewing the performance of the Soviet economy in a more meaningful way.

In general, the statistical data presented for the U.S.S.R. are a judicious combination, gradually achieved by the professional experts in this field, of official figures, independent estimates, and indexes calculated from both official data and independent estimates. Official data have been accepted for the output of individual industrial commodities and for most agricultural products, with the notable exception of grain. In the case of grain, independent estimates usually place the total far below the reported official Soviet figures; moreover, the degree of official exaggeration in regard to this highly sensitive indicator is believed to have increased in the past few years.

Indexes of Soviet production have been calculated by standard U.S. procedures, such as those in constructing the Federal Reserve index of industrial production and the USDA index of farm output. The calculated index of Soviet industrial production typically shows a growth of one or two percentage points less than the official Soviet index, whose upward bias is attributable to the use of prices and weights of a biased character.

Data on the foreign trade of the U.S.S.R. are taken directly from Soviet sources, whereas data on foreign aid have been pieced together from a variety of official and nonofficial sources.

By and large, the data presented herewith, if anything, tend to show the favorable side of the Soviet economy. This is largely due to the fact that available Soviet output data are often limited to items of special prominence in the Soviet economy. Hence, where comparisons are made with the United States, the products compared are particularly important for the Soviet economy, while they may or may not be of equally great importance in the U.S. economy with its own distinctive patterns of production.

¹ The figures shown are official Soviet estimates "for the territory of the U.S.S.R., including the western oblasts of the Ukraine and Belorussia, Moldavia, Lithuania, Latvia, and Estonia." The figures presumably apply to the interwar territory adjusted for the annexations of 1939 and 1940, but exclude the population in the territory retroceded to Poland at the end of the war.

¹ Census of Dec. 17, 1926.

² Census of Jan. 17, 1939.

Source: Soviet Union: 1913-39: Tsentral'noye statisticheskoye upravleniye pri sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1963 godu, statisticheskiy vyzhegodnik (The National Economy of the U.S.S.R. in 1963, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1963, pp. 7-8. 1941: Estimate. 1950-80: Averages of Jan. 1 figures shown in *Dimensions of Soviet Economic Power*, Joint Economic Committee of the U.S. Congress, Washington 1962, p. 570.

United States 1913-41: U.S. Department of Commerce, Bureau of the Census, *Historical Statistics of the United States, Colonial Times to 1957*, Washington, 1960, p. 7. 1950 and 1962: "Estimates of the Population of the United States, Jan. 1, 1950, to Sept. 1, 1962," *Current Population Reports*, series P-25, No. 256, Oct. 15, 1962. 1970 and 1980: "Interim Revised Projections of the Population of the United States, by Age and Sex: 1975 and 1980": *Current Population Reports*, series P-25, No. 251, July 6, 1962. The figures shown above as series B and C are given in the source as series II and III, respectively. The series II (B) projections assume constant fertility at the 1955-57 level; the series III (C) projections assume that fertility will decline to the 1949-51 level by 1965-70 and that it will remain at that level until 1980. Both series assume that mortality will decline and that there will be a net immigration of 300,000 annually.

TABLE I-9.—Population of cities in the U.S.S.R. with 1963 populations of 100,000 inhabitants or more, by republic and oblast, 1939, 1959, 1961, 1962, and 1963—Continued

[Population figures in thousands. Figures for 1939 presumably relate to the beginning of the year; those for 1959 to the census of Jan. 15. Figures for other years are official estimates for Jan. 1. Data for 1963 are available for administrative centers of oblasts, krais, and republics only; thus, no totals are shown for administrative subdivisions for that year, and (n.a.), indicating not available, has been placed in all cells for which data are missing. Figures enclosed in parentheses are not official Soviet estimates. A minus sign (—) in the percent columns denotes a decrease]

¹ Angarsk was established in 1951.

² Because most of the prewar population of Kaliningrad (formerly the East Prussian city of Königsberg) has apparently been expelled and replaced by Russians, no figure for 1939 is shown.

³ Because much of the prewar population of Klaypeda (formerly Memel) has apparently been expelled and replaced by Russians, no figure for 1939 is shown. The percent change between 1939 and 1959 and between 1939 and 1961 for Lithuanian S.S.R. excludes Klaypeda.

Land area per Soviet collective farm ²	15,404
Sown area per Soviet collective farm ²	7,010
Land area per Soviet state farm ²	77,588
Sown area per Soviet state farm ²	24,991
	Number
Workers per U.S. farm	1.5
Households per Soviet collective farm ²	404
Workers per Soviet state farm ²	804

¹ "Farm Income Situation," FIS-191, Economic Research Service, USDA, July 1963, p. 42, and "Number of Farms and Land in Farms," USDA Statistical Reporting Service, Feb. 23, 1962. In 1959 slightly more than half of all U.S. farms had sales of over \$2,500. Farms with sales of \$2,500 or more accounted for about 94 percent of all farm sales.

² "Narodnoe khozyaistvo SSSR, 1962." Does not include private plots of individuals which account for about 3-4 percent of sown area and a much larger percentage of livestock. These plots account for about 1/3 of total agricultural production.

³ Land area for U.S. farms with sales of more than \$2,500 was slightly above 400 acres in 1959.

Rice, rough.....	1,000 tons.....	3,302	298	9
Cotton, ginned.....	1,000 bales.....	14,867	6,715	45
Soybeans for beans.....	1,000 bushels.....	669,211	³ 12,566	2
Sunflower seed.....	1,000 tons.....	(⁴)	³ 4,850	-----
Peanuts, picked and threshed.....	do.....	905	(⁴)	-----
Flaxseed.....	1,000 bushels.....	32,230	³ 16,800	52
Sugarbeets.....	1,000 tons.....	18,254	³ 52,029	285
Sugarcane, for sugar and seed.....	do.....	20,037	(⁴)	-----
Sugar production ⁵	do.....	5,572	6,600	118
Tobacco.....	1,000 pounds.....	2,060,992	224,869	11
Makhorka.....	do.....	(⁴)	66,138	-----
Fiber flax.....	1,000 tons.....	(⁴)	435	-----
Potatoes.....	1,000 hundredweight.....	266,703	³ 1,364,647	511
Sweetpotatoes.....	do.....	19,362	(⁴)	-----
Vegetables.....	1,000 tons.....	⁷ 20,075	17,637	87
Citrus.....	do.....	6,478	(⁴)	-----
Grapes.....	do.....	3,239	3,276	-----
Total fruits (including citrus, grapes, and berries).....	do.....	⁸ 16,646	6,590	40
Tree nuts.....	do.....	205	(⁴)	-----
Tea.....	do.....	(⁴)	188	-----
Hay, all.....	do.....	121,566	⁹ 85,097	70

¹ "Crop Production 1963 Annual Summary."

² "Narodnoe khozyalstvo SSSR, 1962" unless otherwise noted.

³ USDA estimates.

⁴ Not available.

⁵ For factory sugar production only.

⁶ For United States includes continental beet and cane and Hawaii, Puerto Rico, and U.S. Virgin Islands. For U.S.S.R. includes sugar produced from domestic beets only.

⁷ U.S. commercial vegetable production only.

⁸ For United States includes 20 major fruits exclusive of most berries.

⁹ Hay and green feed calculated in terms of hay, including natural hay harvested by individual farmers.

TABLE II-6.—Livestock numbers, 1963¹

Kind	United States ²	Soviet Union ³	U.S.S.R. as percent of United States
All cattle.....	103.7	87.0	84
Cows ⁴	⁵ 18.7	⁶ 38.0	203
Hogs.....	58.7	70.0	119
Sheep.....	30.2	139.7	463
Horses.....	⁷ 3.1	9.1	294
Poultry.....	⁸ 371.8	⁹ 550.4	148

¹ Beginning of year.

² "Livestock and Poultry Inventory," USDA Statistical Reporting Service, Feb. 13, 1963.

³ Official Soviet figure: "Narodnoe khozyalstvo SSSR, 1962."

⁴ Included in all cattle.

⁵ 2 years old and for milk.

⁶ All cows.

⁷ 1961. USDA horse estimates discontinued after 1961.

⁸ Chickens and turkeys only.

⁹ All poultry.

TABLE II-7.—Production of livestock commodities, 1962

Commodity	Unit	United States ¹	Soviet Union ²	U.S.S.R. as percent of United States
Beef and veal.....	Million pounds.....	16,311	³ 6,184.0	38
Pork.....	do.....	11,841	³ 6,614.0	56

SECTION III
INDUSTRY

TABLE III-1.—U.S.S.R.: Selected economic indicators 1958, 1962, and 1965 plan

Commodity	Unit	1958	1962	Original plan, 1965	Revised plan, 1965 ¹	Percent	
						Average annual increase, 1959-62	Required annual increase, 1963-65 ²
Primary energy ³	Million MT/SF ⁴	616.4	779.8	1,016	* 952.8	6.1	6.9
Electric power	Billion kilowatt-hours	235.4	369.3	500-520	508	11.9	11.2
Crude oil	Million metric tons	113.2	186.2	230-240	240	13.3	8.8
Natural gas	Billion cubic meters	28.1	73.5	148.3	128	27.2	20.3
Pig iron	Million metric tons	39.6	55.3	65-70	65.7	8.7	5.9
Crude steel	do.	54.9	76.3	86-91	89.3	8.6	5.4
Cement	do.	33.3	57.3	75-81	* 71-72	14.5	7.4-7.9
Mineral fertilizers ⁵	do.	12.4	17.3	35	Same	8.7	26.5
Artificial and synthetic fibers	Thousand metric tons	166	277	666	444	13.7	17.0
Textiles ⁷	Billion square meters	5.82	6.65	8.26	Same	3.4	7.5
Leather footwear	Million pairs	356.4	456.3	515	Same	6.4	4.1
Chemical industry	Index (1958=100)	100	161	* 300	(*)	12.6	23.0
Gross industrial production ⁸	Index (1958=100)	100	145	180	186	9.7	8.7

¹ Unless otherwise indicated, revisions of plan are as of December 1963.

² Based on the revised plan data for 1965 when available.

³ Primary energy expressed in terms of standard fuel. Including coal, crude oil, natural gas, peat, shale, and firewood, but excludes hydroelectric power.

⁴ Million metric tons of standard fuel.

⁵ Unofficial revision.

⁶ In standard Soviet units.

⁷ Including cotton, wool, linen, and silk.

⁸ Although a new and apparently lower goal has been set for 1965, the coverage of the industry may be smaller than that contemplated under the original plan.

⁹ Gross value of production of industry at constant prices.

TABLE III-2.—Production of major chemicals in the U.S.S.R., 1955 and 1958-62, and in the United States, 1962

Commodity	Unit	U.S.S.R.						United States, 1962
		1955	1958	1959	1960	1961	1962	
Sulfuric acid (100 percent)	Thousand metric tons	3,798	4,803	5,082	5,398	5,728	6,132	17,555
Soda ash (95 percent)	do.	1,437	1,692	1,728	1,887	2,115	2,332	4,399
Caustic soda (92 percent)	do.	563	709	757	765	897	961	5,388
Mineral fertilizers ¹	do.	9,669	12,420	12,917	13,867	15,315	17,262	* 36,500
Plastics	do.	181	260	294	332	408	475	3,347
Rubber tires	Thousand units	10,190	14,395	15,480	17,225	18,996	20,846	137,641
Chemical fiber	Thousand metric tons	110	166	180	211	250	277	1,017

¹ In standard Soviet units.

² Estimated.

TABLE III-3.—Production of consumer goods in the U.S.S.R., 1955 and 1958-62, and in the United States, 1962¹

Commodity	Unit	U.S.S.R.						United States, 1962 (preliminary)
		1955	1958	1959	1960	1961	1962	
Fabrics:								
Cotton.....	Million square meters.	4,227	4,308	4,615	4,838	4,875	4,914	9,074
Wool.....	do.....	316	385	415	438	454	469	434

³ Data for 1958-62 are from a revised Soviet investment series published in *Vestnik statistiki*, No. 1, 1964, p. 94. This series, which represents a revision upward as compared with the previously published series, may reflect a change in the Soviet classification of the chemical industry. The new data are believed to be inclusive of all, or virtually all, investment in the chemical industry (the element of uncertainty is due to the possible exclusion from the revised series of small amounts of investment expenditures from "noncentralized" sources).

*Underaged comprise both males and females 12-15 years of age. The able-bodied age group includes males 16-59 years of age and females 16-54 years of age. The overaged group relates to males 60 years of age and over and females 55 years of age and over.

¹ TsSU pri Sovete ministrov SSSR, *Itogi vsesoyuznoy perepisi naseleniya 1959 goda, SSSR (Svodnyy tom) (Results of the All-Union Census of Population of 1959, U.S.S.R. [Summary Volume])*, Moscow, Gosstatizdat, 1962, tables 13, 30, 32, 33, pp. 50-51, 96-97, 98-99, 104-105.

² —, *Zhenshchiny i deti v SSSR, statisticheskiy sbornik (Women and Children in the U.S.S.R., A Statistical Compilation)*, Moscow, Gosstatizdat, 1961, p. 57.

³ Derived either by addition or subtraction as appropriate.

⁴ A closing error of 62,000 able-bodied persons out of 97,793,000 appears at this point. The figure shown in the table is the sum of the parts both horizontally and vertically. According to the summary volume of census results (*Itogi * * **, *op. cit.*, table 32, pp. 98-99), the number of able-bodied persons having employment or engaged in the private subsidiary economy was 97,731,139 persons.

⁵ Computed from *ibid.*, tables 39 and 33, pp. 117-122 and 104-105. Rates of employment by sex and age were applied to total employment, by sex, for corresponding branches. In computing employment in the socialized sector from employment in the total national economy (excluding private subsidiary economy), the armed forces was subtracted, as well as the employment in the private independent sector. Employment by sex and age for workers and employees in agricultural branches was determined by subtracting the computed employment for collective farmers and individual peasants from the computed employment for all agriculture.

⁶ To estimate certain unreported categories, the following assumptions were made:

a. Collective farm employment in nonagricultural branches was assumed to be composed only of able-bodied persons;

b. Employment for overaged male and female independent artisans was arbitrarily estimated at 10,000 and 5,000 persons, respectively;

c. The distribution of the total able-bodied population employed in the private subsidiary economy (5,035,000 persons) was estimated as two-thirds for the members of families of workers and employees and one-third for the members of families of collective farmers;

d. Males engaged in the private subsidiary economy was estimated as follows: All able-bodied males in this category were assumed to be members of families of workers and employees; overaged males were assumed to be allocated in the proportion of five-eighths as members of families of workers and employees, and three-eighths as members of families of collective farmers;

e. It was assumed that there were no underaged persons in the entire category of the private subsidiary economy, following the methodology prescribed for the census taking;

f. Able-bodied students in the "Population outside labor force" category were arbitrarily distributed as one-third males and two-thirds females;

g. It was assumed that all males in the "Other" category of "Population outside labor force" were overaged.

⁷ V. Rozdyalovskaya, "Employment of U.S.S.R. Citizens According to Data of the 1959 Census of Population," *Vestnik statistiki (Statistical Herald)*, no. 3, March 1961, p. 4. Given as 5.7 million persons.

TABLE V-A-2.—*Civilian labor force of the U.S.S.R., by socioeconomic category, branch, and sex, Jan. 15, 1959*

[Absolute figures in thousands. Figures are independently rounded and may not add to totals.]

Labor force category	Total	Males	Females	Females as a percent of total
Total civilian labor force	105,372	48,817	56,555	53.7
I. Socialized and private independent sector	95,507	47,903	47,604	49.8
A. Branches of material production	80,863	42,520	38,342	47.4
Industry, construction, transport, and communications ¹	36,575	22,423	14,152	38.7
Agriculture	38,426	17,662	20,764	54.0
Collective farmers	31,723	13,731	17,992	56.7
Workers and employees	6,611	3,898	2,713	41.0
Individual peasants	92	32	60	65.2
Trade, public dining, etc.	5,171	1,993	3,178	61.5
Other branches	691	443	248	35.9
B. Branches of nonmaterial production	14,453	5,249	9,204	63.7
Education, science, public health	9,793	2,865	6,928	70.7
Housing, communal economy, administration, finance-credit system	4,660	2,385	2,275	48.8
C. Unknown	191	133	58	30.4
II. Private agricultural subsidiary sector	9,865	914	8,951	90.7

¹ The census classification of material and nonmaterial production does not differentiate between productive and nonproductive transport and communications; regular annual reports do make this distinction.

C. Individual peasants ²¹	5,950	1,152	179	196	167	132	125	92	75	40	31

¹ Sum of the components.² Excludes workers and employees hired by collective farms; the additional employment of workers and employees having more than one job in State establishments and/or performing tasks for private individuals; domestics, day laborers, etc.; (probably) people working full time for the Communist Party; (probably) civilians working in military establishments; and unpaid labor "volunteered" by "social" organizations, such as the Komsomol, in order to plant trees, construct barns on State farms, collect scrap metal, etc.³ Includes workers and employees, members of producers' cooperatives, and independent artisans who are engaged in economic activities other than those of agriculture and forestry. Workers and employees engaged in normally nonagricultural-type activities of sovkhozy, machine tractor stations, and other State agricultural establishments (industry, construction, health and education, etc.) are included in agricultural employment. All collective farm members are included in agricultural employment.⁴ The system of producers' cooperatives was abolished in October 1960. Employment for this sector is now included in the workers and employees category.⁵ Table 7.⁶ Table 7.⁷ Table 7. Includes housing-communal economy, administrative organs, credit and insurance organizations, and undistributed residual.⁸ TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1960 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1960, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1961, p. 633 (cited hereafter as *Nar. khoz. v 1960*).⁹ By year:1940: Estimated as 2.2 percent (of total employment of 79,019,000) reported in TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1956 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1956, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1957, p. 202 (cited hereafter as *Nar. khoz. v 1956*). It should be noted that the 2.2 percent covers all material production branches. Industry, however, is the largest component.

1950: Estimated by assuming the same relationship between the total membership and that employed in industry as in 1953 (87.5 percent).

1953: S. A. Gorelik, *Statistika (Statistics)*, Part II, [Leningrad], KOIZ, 1956, p. 97.1955: TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR, statisticheskiy sbornik (The National Economy of the U.S.S.R., A Statistical Compilation)*, Moscow, Gosstatizdat, 1956, p. 44.1956: *Nar. khoz. v 1956*, p. 50. Between 1955 and 1956 a number of enterprises employing 600,000 members in the producers' cooperatives system were transferred to the state sector. Of this number 500,000 were in industry.1957: Estimated. The figure of 900,000 for wage workers in industry (members of producers' cooperatives) reported in TsSU pri Sovete ministrov SSSR, *SSSR v tsifrakh, statisticheskiy sbornik (The U.S.S.R. in Figures, A Statistical Compilation)*, Moscow, Gosstatizdat, 1958, p. 59, was expanded by 17 percent (rounded) to cover the entire industrial-production personnel. The expansion factor was derived on the basis of the reported 1960 relationship between wage workers and total industrial-production employ-

ment in industry of producers' cooperatives (1,000,000 and 1,200,000, respectively). *Nar. khoz. v 1960*, pp. 216-217.

1958: TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1958 godu, statisticheskiy vyzhegodnik (The National Economy of the U.S.S.R. in 1958, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1959, p. 131.

1959: ———, *Narodnoye khozyaystvo SSSR v 1959 godu, statisticheskiy vyzhegodnik (The National Economy of the U.S.S.R. in 1959, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1960, p. 138.

¹⁰ Residual.

¹¹ 1940, 1960, 1955-58: Approximations derived as follows (in thousands):

Categories	1940	1950	1955	1956	1957	1958
Nonsocialized personnel *-----	7, 604	1, 619	350	362	277	281
Individual peasants (line II.C, table 4).	^b 7, 000	^b 1, 355	186	167	132	125
Independent artisans (residual)-----	604	264	164	195	145	156

* U.S. Bureau of the Census, *The Magnitude and Distribution of Civilian Employment in the U.S.S.R.: 1928-59*, by Murray S. Weitzman and Andrew Elias. International Population Reports, Series P-95, No. 58, Washington, D.C., Foreign Manpower Research Office, Bureau of the Census, April 1961, table 2A, p. 59 (cited hereafter as Weitzman and Elias).

^b The unadjusted value for the individual peasants (see note 21) was subtracted from the total number of nonsocialized personnel. This was done in the belief that the Soviet Union did not use an annual average measurement standard for individual peasant employment but more likely a demographic count.

1953: The average of the 1950 and 1955 estimates.

1959: Census figure from TsSU pri Sovete ministrov SSSR, "On the Distribution of the U.S.S.R. Population by Social Group, Branch of the National Economy, and Occupation and On the Educational Level of Persons Performing Physical and Mental Labor," *Vestnik statistiki (Statistical Herald)*, No. 12, December 1960, pp. 4-5.

1960-62: In the absence of necessary information, assumed to be the same as for 1959.

¹² Agricultural employment differs slightly in concept from nonagricultural employment in that agricultural employment, in addition to the annual average employment of persons by branch of agricultural economy, also includes a synthetic employment figure for kolkhoz industry, construction, and the work performed on the private agricultural plots of collective farmers and of workers and employees and their families. The figure for employment relating to private agricultural plots is derived, mainly, on the basis of labor input requirements for the care and the cultivation of private agricultural holdings, and represents a man-year equivalent employment concept based on 280 man-days per man-year.

¹³ Table 7. In 1958, machine tractor stations were reorganized into repair-technical stations and many of the tractors and other agricultural machines were sold to collective farms.

For purposes of consistency with pre-1953 and post-1958 data, the figures for 1953-58 were adjusted to remove collective farmers transferred to the employment rolls of machine tractor stations from collective farms following the October 1953 resolutions of the Communist Party and U.S.S.R. Government. These employment adjustments totaled

229,000 for 1953, 1,918,000 for 1955, 1,822,000 for 1956, 1,565,000 for 1957, and 500,000 for 1958. The values for 1955 and 1956 are believed to be somewhat overstated but the lack of additional information does not permit further refinement. See Weitzman and Elias, p. 134. The 1953-58 estimates of collective farmers transferred to the rolls of machine tractor stations are included in this table in the estimate of annual average employment in the socialized sector of the collective farm economy. It should be noted that these adjustments of Soviet data were not made in table 7.

¹⁴ Table 9.

¹⁵ 1940 and 1950: Sum of the components.

1953, 1955, 1958-60: *Nar. khoz. v 1960*, p. 521, adjusted for the years 1953-58 for the transfers described in note 13.

1956-57: TsSU pri Sovete ministrov SSSR, *Sel'skoye khozyaystvo SSSR, statisticheskiy sbornik (Agriculture of the U.S.S.R., A Statistical Compilation)*, Moscow, Gosstatizdat, 1960, p. 450 (cited hereafter as *Sel'. khoz.*).

1961-62: TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1962 godu, statisticheskiy vyzhegodnik (The National Economy of the U.S.S.R. in 1962, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1963, p. 368 (cited hereafter as *Nar. khoz. v 1962*).

¹⁶ Consists essentially of hunting and fishing.

1940 and 1950: Weitzman and Elias, table 2, p. 57.

1953-62: Difference between total employment in the socialized sector of collective farms and that in agricultural kolkhozy.

¹⁷ 1940 and 1950: Murray S. Weitzman, Murray Feshbach, and Lydia Kulchychka, "Employment in the U.S.S.R.: Comparative U.S.S.R.-U.S. Data," in Joint Economic Committee, Congress of the United States, *Dimensions of Soviet Economic Power*, Washington, U.S. Government Printing Office, 1962, Table A8, col. (6), p. 666.

1953, 1955, 1958-60: *Nar. khoz. v 1960*, p. 522.

1956, 1957: *Sel'. khoz.*, p. 459.

1961-62: *Nar. khoz. v 1962*, p. 369.

¹⁸ 1940 and 1950: Weitzman, Feshbach, and Kulchychka, *loc. cit.*, column (6a), adjusted for agricultural employment in nonagricultural kolkhozy.

1953, 1955-59: *Sel'. khoz.*, p. 450, adjusted for the transfers described in note 13 and for the agricultural employment in nonagricultural kolkhozy. The latter adjustment was made on the basis of the assumption that agriculture comprises only a small part of the economic activities on nonagricultural collective farms, arbitrarily set at 20 percent of total employment.

1960: *Nar. khoz. v 1960*, p. 521. See note immediately above.

1961-62: *Nar. khoz. v 1962*, pp. 368-369. See note for 1953, 1955-59 above.

¹⁹ The difference between total employment on agricultural collective farms and their agricultural employment (line II.B.1.b-II.B.1.b.(1)). Rounded.

²⁰ Weitzman, Feshbach, and Kulchychka, *op. cit.*, Table A9, p. 667.

²¹ 1940 and 1950: In estimating annual average employment of individual peasants for 1940 and 1950, it was assumed that their participation in peasant agriculture per household was approximately equivalent to the number of labor force participants in collective farming per collective farm household. A second assumption involved the use of a constant peak month employment factor of 85 percent, which is taken to represent the proportion of individual peasants who participated at some time during the year in individual peasant agriculture.

1959: *Nar. khoz. v 1960*, p. 26.

1953, 1955-58, 1960-62: In estimating employment for years other than 1959, the 1959 census estimate of 92,000 was moved by the computed annual percent change in conventional man-year equivalent employment for individual peasants and other categories of population given in table 9.

TABLE V-A-5.—*Workers and employees, by branch of the national economy, U.S.S.R.: Selected years, 1928-62*

Kheyntman, *Organizatsiya proizvodstva i proizvoditel'nost' truda v promyshlennosti SSSR (na primere mashinostroyeniya i chernoy metallurgii) (Organization of Production and Labor Productivity in U.S.S.R. Industry [By the Example of Machine-Building and Ferrous Metallurgy])*, Moscow, Gosplanizdat, 1961, p. 59.

³ A. V. Smirnov, "Changes in the Number and Composition of Wage Workers in U.S.S.R. Heavy Machine-Building in the Years of the Fourth Five-Year Plan (1946-1950)," in *Akademiya nauk SSSR, Institut istorii, Izmeneniya v chislennosti i sostave sovetzskogo rabochego klassa, Sbornik statey (Changes in the Number and Composition of the Soviet Working Class, A Collection of Articles)*, edited by D. A. Bayevskiy et al., Moscow, Izdatel'stvo Akademii nauk SSSR, 1961, pp. 236-237. This source also reports wage worker employment in heavy machine-building for other years as follows: 1945, 59,449; 1946, 62,822; 1947, 66,607; 1948, 74,189; 1949, 83,497.

⁴ M. M. Brenner, *Ekonomika nefyanoy promyshlennosti SSSR (Economics of the U.S.S.R. Oil Extraction Industry)*, Moscow, Ekonomizdat, 1962, p. 344.

⁵ Calculated from an index given in I. I. Ryzhenkov et al., "Basic Factors in the Growth of Labor Productivity in the U.S.S.R. Oil Extraction Industry," in *Gosudarstvennyy komitet Soveta ministrov SSSR po toplivnoy promyshlennosti, Vsesoyuznyy neftegazovyy nauchno-issledovatel'skiy institut, Ekonomika nefledoboyayushchey promyshlennosti (Economics of the Oil Extraction Industry)*, Transactions, Issue XXXIX, Moscow, Gostoptekhizdat, 1963, p. 194, and an absolute datum for 1958 from Kheyntman, *op. cit.*, p. 58.

⁶ Residual (total oil extraction and refining minus oil extraction).

⁷ Kheyntman, *loc. cit.*

⁸ Estimated from productivity data given in L. M. Smyslyayeva, *Razvitiye gazovoy promyshlennosti i ekonomicheskaya effektivnost' kapitaloizlozheniy (Development of the Gas Industry and Economic Effectiveness of Capital Investments)*, Moscow, Izdatel'stvo Akademii nauk SSSR, 1961, p. 87, and output data from TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1958 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1958, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1959, p. 213 (cited hereafter as *Nar. khoz. v 1958*); —, *Narodnoye khozyaystvo SSSR v 1960 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1960, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1961, p. 267 (cited hereafter as *Nar. khoz. v 1960*); —, *Narodnoye khozyaystvo SSSR v 1961 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1961, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1962, p. 211 (cited hereafter as *Nar. khoz. v 1961*); and United Nations, Statistical Office, *Statistical Yearbook, 1962*, Fourteenth Issue, New York, United Nations, 1963, p. 146 (for 1954 output). In addition to the figures shown in the table an estimate for 1954 of 2,000 wage workers employed in gas extraction can be derived.

⁹ Estimated by expanding reported employment in the Estonian shale industry, given in D. T. Kuznetsov, *Ocherki razvitiya stantsennoy promyshlennosti Estonskoy SSR (Essays on the Development of the Shale Industry of the Estonian S.S.R.)*, Leningrad, Gostoptekhizdat, 1960, p. 137, by the proportion of production in the Estonian S.S.R. to the reported U.S.S.R. production from TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1959 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1959, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1960, p. 191 (cited hereafter as *Nar. khoz. v 1959*), and *Nar. khoz. v 1961*, p. 212.

¹⁰ Adjusted to correspond to the most recent classification on the basis of the observed relationship for years for which both sets of data are available. (Percent increase between new and old classifications: 1940, 122 percent; 1958, 120 percent; 1959, 119 percent.) A

20-percent correction factor was applied in the case of the 1956 and 1957 employment. See source note to table 5.

¹¹ For 1960, estimated as follows: Leningradskiy gosudarstvennyy universitet im. A. A. Zhdanova, *Rezervy rosta proizvoditel'nosti truda v narodnom khozyaystve (Reserves for the Growth of Labor Productivity in the National Economy)*, edited by A. I. Klyuyev, Leningrad, Izdatel'stvo Leningradskogo universiteta, 1962, p. 84, gives 22.7 million persons employed in industry (including collective farm industry) for 1960. Subtracting 22,291,000 industrial-production personnel in that year (*Nar. khoz. v 1961*, p. 181, excluding collective farm industry employment) yields an estimated 409,000 for collective farm industry wage workers (other categories of collective farm industrial-production personnel are probably minimal). Adding this to the reported Labor Section datum of 18,574,000 wage workers, a total estimate of 18,983,000 wage workers in industry is obtained. To this, the reported 1960 share of ferrous and nonferrous metallurgy (7.3 percent, in L. B. Al'ter et al. [eds.], *Rost obshchestvennogo proizvodstva i proporsii narodnogo khozyaystva SSSR (Growth of Social Production and Proportions in the U.S.S.R. National Economy)*, Moscow, Sotsekgiz, 1962, p. 304) is applied. From the resultant (1,388,800), the reported 1960 employment in ferrous metallurgy is subtracted and an estimate of 500,000 is obtained. This figure is probably minimal because the estimating procedure omitted any estimated small-scale state industry employment not included in the Labor Section datum.

Employment estimates for other years also are rough approximations based on production-productivity indexes given in *Nar. khoz. v 1961*, p. 174; *Nar. khoz. v 1959*, p. 147; TsSU pri Sovete ministrov SSSR, *Promyshlennost' SSSR, statisticheskiy sbornik (Industry of the U.S.S.R., A Statistical Compilation)*, Moscow, Gosstatizdat, 1957, p. 35; S. A. Pervushin et al., *Ekonomika tsvetnoy metallurgii SSSR (Economics of U.S.S.R. Nonferrous Metallurgy)*, Moscow, Metallurgizdat, 1960, p. 362; A. Kh. Benuni and S. A. Pervushin, *Tekhnicheskiy progress i ponysheniye proizvoditel'nosti truda v tsvetnoy metallurgii SSSR (Technical Progress and Raising Labor Productivity in U.S.S.R. Nonferrous Metallurgy)*, Moscow, Metallurgizdat, 1963, p. 9; and M. Gorbunov and A. Zalkind, "Growth of Labor Productivity in the U.S.S.R. National Economy During the First Two Years of the Seven-Year Plan," in *Nauchno-issledovatel'skiy institut truda Gosudarstvennogo komiteta Soveta ministrov SSSR po voprosam truda i zarabotnoy platy, Voprosy proizvoditel'nosti truda v semletke, Sbornik (Questions of Labor Productivity in the Seven-Year Plan, Collection), Uchenyye zapiski NII truda: Voprosy truda*, Issue VI, Moscow, n.p., 1961, pp. 19-21. For 1951 (491,000) and for 1954 (486,000) wage workers can be estimated from the sources cited above.

¹² Kheyntman, *op. cit.*, p. 56.

¹³ Adjusted by 1 percent. (Percent increase between new and old classifications: 1940, 101.9 percent; 1958, 100.8 percent; 1959, 100 percent.) See footnote 10 above and source note to table 5.

¹⁴ For 1960, estimated by using the same procedure as in footnote 11 above. The reported proportion of wage workers in the chemical industry for 1960 is 3.9 percent (Al'ter, *loc. cit.*). Multiplying this by the estimate of 18,983,000 wage workers yields 740,000.

Estimated employment for other years also are rough approximations based on production-productivity indexes given in *Nar. khoz. v 1961*, p. 173; *Nar. khoz. v 1960*, p. 225; *Nar. khoz. v 1959*, pp. 146 and 153; *Nar. khoz. v 1958*, pp. 139 and 154; and, Vysshaya partiynaya shkola pri TsK KPSS, *Kafedra politicheskoy ekonomii, Sotsialisticheskiy sposob proizvodstva, vypusk II, Sotsialisticheskoye proizvodstvo i raspredeleniye (Socialist Means of Production, Issue II, Socialist Production and Distribution)*, edited by G. A. Kozlov, Moscow, Izdatel'stvo VPSH i AON pri TsK KPSS, 1962, p. 188. Differences due to the change in branch classification indicated in *Nar. khoz. v 1959* (for the 1940, 1950, and

1953 estimates) have been disregarded inasmuch as the index numbers available for both series do not vary greatly.

¹⁵ Calculated from productivity data given in Z. I. Loginov, *Tsementnaya promyshlennost' SSSR i perspektivy yeye razvitiya (U.S.S.R. Cement Industry and Perspectives of its Development)*, Moscow, Gosplanizdat, 1960, p. 111, and output data from *Nar. khoz. v 1958*, p. 259.

¹⁶ Calculated from productivity data given in F. G. Banit et al., *Tsementnaya promyshlennost', Sostoyaniye i perspektivy razvitiya (Cement Industry, Status and Future*

Development), Moscow, Gosstroyizdat, 1963, p. 20, and output data from *Nar. khoz. v 1962*, pp. 184-185, and *Nar. khoz. v 1961*, p. 239.

¹⁷ Estimated by using the same procedure and sources as in footnote 11 (18,983,000 wage workers times 1.3 percent).

¹⁸ Average number of wage workers in 1948. As of March 1, 1949, there are reported to have been 130,570 wage workers in this industry. See N. I. Buzlyakov, *Voprosy planirovaniya pechati v SSSR (Questions of Planning Printing in the U.S.S.R.)*, Moscow, Gosudarstvennoye izdatel'stvo "Iskusstvo," 1957, p. 178.

¹ No adjustment has been made for transfers of some of the collective farmers to the rolls of machine tractor stations between 1953 and 1958, as was done in table V-A-4.

² Includes veterinary services, artificial insemination stations, research stations, etc.

³ Adjusted for reclassification of the personnel engaged in collection of secondary raw materials. The adjustment involved transferring the following number of persons from the "Trade, procurement, and material-technical supply" category to the "Other" category: 1928, 4,000; 1932, 13,000; and 1937, 16,000 (0.8 percent of total, based on the 1940 relationship):

$\frac{2,519}{2,539} = 99.2$ percent).

⁴ In the handbook, TsSU pri Sovete ministrov RSFSR, *Narodnoye khozyaystvo RSFSR v 1961 godu, statisticheskiy yezhegodnik* (*The National Economy of the R.S.F.S.R. in 1961, A Statistical Yearbook*), Moscow, Gosstatizdat, 1962, p. 442, for the first time in the postwar period is reported the employment in "Administrative organs" for the years 1955 and 1958-1961, in two parts—i.e., "State and economic administrative organs" and "Administrative organs of cooperative and social organs." The sum of these two subbranches equals that shown for the R.S.F.S.R. in the republic breakdown of the national employment figures in TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1961 godu, statisticheskiy yezhegodnik*

the national economy, U.S.S.R.: Selected years, 1928-62

264	262	263	(n.a.)	265	266	261	260	260	265	277	283
967	1,079	1,150	(n.a.)	1,269	1,292	1,337	1,464	1,739	1,967	2,127	2,236

(The National Economy of the U.S.S.R. in 1961, A Statistical Yearbook), p. 570, and in other handbooks for 1958 and 1960. For all of these five years shown in the R.S.F.S.R. handbook, the proportion of the first subbranch to the total of the two subbranches varies no more than two-tenths of a percentage point from 90.0 percent. Using this proportion, estimates for U.S.S.R. employment in these years for each subbranch can be made as follows (in thousands): "State and economic administrative organs"—1955, 1,225; 1958, 1,165; 1959, 1,143; 1960, 1,120; 1961, 1,166; and for "Administrative organs of cooperative and social organs"—1955, 136; 1958, 129; 1959, 127; 1960, 124; 1961, 130.

^a Estimates of subbranch employment can be derived for the first time in the postwar period for the "Residual" category of "Other branches" by the following procedure: The R.S.F.S.R. handbook (*ibid.*) reports employment in "Other branches" to be 1,347,000 workers and employees in 1961, and the U.S.S.R. handbook (*ibid.*) indicates 2,127,000 workers and employees in the same year for the country as a whole. The ratio of the two data (U.S.S.R./R.S.F.S.R. of 1.58) is then applied to each of the reported R.S.F.S.R. subbranches to obtain approximations of the U.S.S.R. 1961 employment in these subbranches, as follows (in thousands): 1. Capital repair of buildings and structures—740 (463 times 1.58); 2. Drilling—130 (82 times 1.58); 3. Project-survey organizations—430 (270 times 1.58); 4. Literature and Publishing—90 (58 times 1.58); 5. Art—315 (200 times 1.58); 6. Other unidentified residual—425 (269 times 1.58).

See footnotes at end of table, pp. 59, 60.

¹ The definition of "able-bodied" collective farmers has varied over time. In the prewar period, the able-bodied category included both males and females 16 years of age and over. In the postwar period, but also including the 1940 data shown here, the age limits have been set at 16 to 59 for males and 16 to 54 for females. The data in this column do not include able-bodied farm members employed as workers and employees in State industry, transport, construction, etc., and full-time able-bodied student members who are not required to earn or work the minimum number of labor-days or man-days.

² A labor-day (*trudoden*) is not a measure of time, but an artificial measure of quantum of work, related to quality and amount of work and varying by type of activity, crop, region, and local rates based on national minimums. Beginning in 1959, all collective farms also had to report the number of man-days worked (see footnote 3 below), and many farms discontinued reporting labor-days completely. For this reason, all data related to labor-days from 1959 on are incomplete.

³ One man-day (*cheloveko-den*), sometimes designated workday (*rabochiy den*), is much closer to a measure of time input than a labor-day. It is, however, related to "appearances for work" (*vykhody na rabotu*), and the number of hours of inputs is not standardized as yet.

⁴ The concept of able-bodied equivalent farmers is used in Soviet planning and statistics to estimate the prime labor input on farms. The number is calculated by dividing the total number of labor-days earned or man-days worked (by persons of all ages who participated in the socialized economy) by the average number of labor-days earned (or man-days worked) by able-bodied farmers alone. Actual able-bodied collective farmers, of course, convert to able-bodied equivalent farmers on a one-to-one basis. It should be noted, however, that in 1959 the 9,242,300 actual nonable-bodied farmers (column 1 minus column 2) convert to less than half the number, or 4,531,000 able-bodied equivalent farmers (column 15 minus column 2).

⁵ U.S. Bureau of the Census, *The Magnitude and Distribution of Civilian Employment in the U.S.S.R., 1923-1959*, by Murray S. Weitzman and Andrew Elias, International Population Reports, Series P-95, No. 58, Washington, D.C., Foreign Manpower Research Office, Bureau of the Census, April 1961, table C-1, p. 142 (cited hereafter as Weitzman and Elias).

⁶ Estimated from total money income of collective farms and average money income per one able-bodied collective farmer who worked on the collective farm. A. Arina, "Collective Farms in 1938 (From Materials of the Collective Farm Annual Reports)," *Sotsialisticheskoye sel'skoye khozyaystvo (Socialist Agriculture)*, No. 12, December 1939, p. 64.

⁷ Percentages shown relate to total number of on-hand able-bodied collective farmers at end of year, including both those who did and those who did not participate in the socialized economy. M. I. Fedorova, *Ukrepneniye obshchestvennogo khozyaystva kolkhozov i izmeneniya v politike zagotovok sel'skokhozyaystvennykh produktov v mirnyye gody tre't'eyu pyatiletki, Lektsiya (Strengthening the Socialized Economy of Collective Farms and Changes in the Policy of Procurement of Agricultural Products During the Peaceful Years of the Third Five-Year Plan, Lectures)*, Moscow, Izdatel'stvo Moskovskogo universiteta, 1960, p. 34. See also p. 24 defining these data as pertaining to able-bodied collective farmers.

⁸ Weitzman and Elias, table C-2, p. 143. Average number of labor-days for the prewar period relate to all farmers 16 years of age and over; data for the postwar period relate to current definition of able-bodied collective farmers. See footnote 1.

⁹ Column 8 divided by column 13.

¹⁰ TsUNKhU Gosplana SSSR, *Proizvoditel'nost' i ispol'zovaniye truda v kolkhozakh v otvory pyatiletki (Productivity and Utilization of Labor in Collective Farms in the Second Five-Year Plan)*, Moscow-Leningrad, Gosplanizdat, 1939, p. 83.

¹¹ Column 12 divided by column 13.

¹² Column 12 divided by column 10.

¹³ Yu. V. Arutyunyan and V. P. Danilov, "Official Collection of Collective Farm Reports in the Country During the Period of the Fatherland War," *Istoricheskiy arkhiv (Historical Archive)*, no. 6, November-December 1962, p. 30. Excluding Yakut A.S.S.R.

¹⁴ *Ibid.*, p. 37. Excluding Yakut and Komi A.S.S.R.'s.

¹⁵ TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1960 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1960, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1961, p. 521 (cited hereafter as *Nar. khoz. v 1960*). The employment data for 1955 through 1958 including fishing collective farms are lower than that reported as excluding this type of collective farm because of the shift of collective farmers to MTS tractor brigades.

¹⁶ Arutyunyan and Danilov, *op. cit.*, pp. 19-20.

¹⁷ A. A. Ivanchenko and P. S. Minakov, *Voprosy metodiki planirovaniya proizvoditel'nosti truda v sel'skom khozyaystve (Questions of the Method of Planning Labor Productivity in Agriculture)*, Moscow, Gosplanizdat, 1960, p. 28.

¹⁸ Yu. V. Arutyunyan, *Mekhanizatsiya sel'skogo khozyaystva SSSR v 1929-1957 gg. (Formirovaniye kadrov massovykh kvalifikatsiy) (Mechanized Personnel of U.S.S.R. Agriculture in 1929-1957 [Formation of Cadres with Mass Qualifications])*, Moscow, Izdatel'stvo Akademii nauk SSSR, 1960, p. 271. Figure for 1954 relates to May; the figures for 1950, 1953, and 1957 exclude able-bodied farmers working in industry, transport, etc.

¹⁹ TsSU pri Sovete ministrov SSSR, *Sel'skoye khozyaystvo SSSR, statisticheskiy sbornik (Agriculture of the U.S.S.R., A Statistical Compilation)*, Moscow, Gosstatizdat, 1960, p. 450 (cited hereafter as *Sel. khoz.*). See also footnote 15.

²⁰ G. G. Badir'yan and A. K. Il'yichev (Eds.), *Ekonomika sotsialisticheskogo sel'skogo khozyaystva (Economics of Socialist Agriculture)*, Moscow, Sel'khozizdat, 1962, p. 181.

²¹ Nauchno-issledovatel'skiy institut truda Gosudarstvennogo komiteta Soveta ministrov SSSR po voprosim truda i zarabotnoy platy, *Trudovyye resursy SSSR (Problemy raspredeleniya i ispol'zovaniya) (Labor Resources of the U.S.S.R. [Problems of Distribution and Utilization])*, edited by N. I. Shishkin, Moscow, Ekonomizdat, 1961, p. 97 (cited hereafter as Shishkin).

²² Shishkin, p. 108. This source notes that 1.4 percent male and 3.3 percent female able-bodied farmers did not earn a single labor-day. See also footnote 7.

²³ *Sel. khoz.*, p. 459. See also Shishkin, p. 109.

²⁴ TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1958 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1958, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1959, p. 495.

²⁵ A. A. Kastorin, *Nekotoryye voprosy ekonomiki i organizatsii sel'skogo khozyaystva SSSR (Some Problems in the Economics and Organization of U.S.S.R. Agriculture)*, Moscow, Uchpedgiz, 1961, p. 86.

²⁶ Akademiya nauk SSSR, Institut ekonomiki, *Voprosy organizatsionno-khozyaystvennogo ukrepleniya kolkhozov (Problems of Organizational and Economic Strengthening of Collective Farms)*, edited by V. P. D'yachenko et al., Moscow, Gospolitizdat, 1957, p. 344. This source also reports an average of 65-70 labor-days per one overaged farmer in 1953-1954 (p. 347) and an average of 133 labor-days per one overaged farmer in 1954 (p. 348).

²⁷ Estimated from the average number of able-bodied collective farmers per farm given in V. G. Venzher, *Voprosy ispol'zovaniya zakona stoimosti v kolkhoznom proizvodstve (Problems in the Utilization of the Law of Value for Collective Farm Production)*, Moscow, Gosplanizdat, 1960, p. 79, and the number of agricultural collective farms for these years (1955 and 1956) reported in TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1956 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1956, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1957, p. 140, and ———, *Narodnoye*

khoyaystvo SSSR v 1959 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1959, A Statistical Yearbook), Moscow, Gosstatizdat, 1960, p. 423.

²⁸ Computed from an index of the annual average number of workdays, 1954=100, in T. Zaslavskaya, "Economic Conditions for the Introduction of Monetary Payments for Collective Farmer Labor," *Voprosy ekonomiki (Problems of Economics)*, no. 11, November 1959, p. 60.

²⁹ Shishkin, p. 99. Probably excluding persons working permanently in State industry, etc.

³⁰ A. Gol'tsov, "Problems in the Utilization of Collective Farm Labor Resources," *Byulleten' nauchnoy informatsii, Trud i zarobotnaya plata (Bulletin of Scientific Information, Labor and Wages)*, no. 6, June 1959, p. 42.

³¹ Akademiya nauk SSSR, Institut ekonomiki, *Osobennosti i faktory razmeshcheniya otrasley narodnogo khozyaystva SSSR (Characteristics and Factors of the Location of Branches of the National Economy of the U.S.S.R.)*, edited by Ya. G. Foygin et al, Moscow, Izdatel'stvo Akademii nauk SSSR, 1960, p. 404. Excluding full-time students and members working in State establishments and institutions. This source also reports the total number of participants in collective farm production for 1958 as 36.8 million. The difference between this figure and that shown in column 1 probably represents the students and members working outside the collective farm sector. An estimate of 26,941,000

able-bodied participants also can be computed from data in Venzher, *op. cit.*, pp. 79 and 81; another estimate of 27,246,000 can be derived by dividing the collective farm indivisible able-bodied collective farmer, in V. P. Rozhin, *Nekotoryye voprosy pod'yema ekonomiki slabykh kolhozov (Some Problems in Raising the Economy of Weak Collective Farms)*, Moscow, Ekonomizdat, 1961, p. 37. From the last two sources, estimates for other years also can be derived as follows: 1953—26,759,000; 1957—27,706,000; 1959—26,722,000.

³² A. P. Teryayeva, "Progressive Forms of Payment for Work in Collective Farms," in Akademiya nauk SSSR, Institut ekonomiki, *Razvitiye obshchestvennogo khozyaystva Buyanov et al., Moscow, Sel'khozgiz, 1960, p. 154.*

³³ A. Voronin, "On the Combining of Agricultural and Industrial Production in the Village," *Voprosy ekonomiki*, no. 10, October 1961, p. 85.

³⁴ B. I. Bragin'skiy, *Proizvoditel'nost' truda v sel'skom khozyaystve, Metodika ucheta i planirovaniya (Labor Productivity in Agriculture, Methods of Recording and Planning)*,

Moscow, Sel'khozizdat, 1962, p. 94. Of this total of 10.3 billion labor-days, 9.2 billion, or 89.3 percent, were earned by able-bodied collective farmers (*ibid.*).

³⁵ A. Gol'tsov, "Utilization of Labor Resources in Collective Farms," *Nauchnyye doklady vysshey shkoly, Ekonomicheskiye nauki (Scientific Reports of Higher Schools, Economic Sciences)*, no. 1, 1961, p. 47. Total number of man-days worked in the private subsidiary economy in 1958 is reported to be 3,353.0 million (*ibid.*).

³⁶ Shishkin, pp. 98 and 99. Estimated by multiplying the total number of participants (35,411,100) by the share of able-bodied collective farmers (73.9 percent).

³⁷ Rozhin, *op. cit.*, p. 79. The figure of 798,500 represents the sum of the republic data given in the source, not the total shown of 748,600. Moreover, according to another source the number of nonparticipating able-bodied farmers in 1959 was 799,000. See A. Glukhov, "Raising the Productivity of Agricultural Labor—A Most Important Condition for the Building of Communism," *Nauchnyye doklady vysshey shkoly, Ekonomicheskiye nauki*, no. 1, January–February 1962, p. 20. According to Shishkin, p. 109, 1.4 percent of the male able-bodied farmers and 4.1 percent of the female able-bodied farmers did not participate in the collective farm socialized economy. See also footnote 7.

³⁸ Shishkin, *loc. cit.*

³⁹ *Ibid.*, p. 98.

⁴⁰ S. I. Semin, *Nedelimyye fondy i puti sblizheniya kolkhozno-kooperativnoy sobstvennosti s obshchenarodnoy (Indivisible Funds and Means for Drawing Collective Farm-Cooperative Property Closer to Public Property)*, Moscow, Ekonomizdat, 1961, p. 79.

⁴¹ Shishkin, p. 91. Total number of man-days worked in the private subsidiary economy in 1959 is reported to be 3,537.3 million (*ibid.*). Additional data on the 1959 labor inputs into the socialized and private subsidiary economies by age and sex, in terms of a detailed percentage distribution of man-hours, is given in M. P. Vasilenko, *Puti preodoleniya sezonosti truda v kolhozakh (Means for Overcoming Seasonality of Work in Collective Farms)*, Moscow, Izdatel'stvo "Sovetskaya Rossiya," 1963, pp. 23 and 24.

⁴² TsSU pri Sovete ministrov SSSR, *Narodnoye khozyaystvo SSSR v 1962 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1962, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1963, p. 369 (cited hereafter as *Nar. khoz. v 1962*).

⁴³ ———, *Narodnoye khozyaystvo SSSR v 1961 godu, statisticheskiy yezhegodnik (The National Economy of the U.S.S.R. in 1961, A Statistical Yearbook)*, Moscow, Gosstatizdat, 1962, p. 461.

⁴⁴ *Nar. khoz. v 1962*, p. 368.

TABLE V-A-9.—*Employment in the private agricultural economy, by subsector, U.S.S.R.: Selected years, 1940-62*

[Absolute figures are 230-day man-year equivalents and are in thousands: (n.a.) indicates data not available and no estimate made]

Year	Total	Collective farmers	Workers and employees	Individual peasants and other categories of population
Conventional man-year equivalents: ¹				
1940.....	(n.a.)	9,133.7	2,038.6	(n.a.)
1950.....	(n.a.)	7,939.0	2,542.6	(n.a.)
1953.....	10,737.1	8,090.3	2,599.1	47.7
1955.....	12,195.0	9,143.2	3,003.3	49.5

¹ Beginning in 1960, all U.S. data include Alaska and Hawaii. For 1959, only the Bureau of Labor Statistics component data, based on establishment payroll records, include Alaska and Hawaii. See Table 12.

Source: U.S.S.R.: Table 4. Nonagricultural and agricultural employment as shown in table 4 was adjusted in order to achieve greater comparability for U.S.S.R.-United States comparisons. Employment in U.S.S.R. agriculture for such activities as repair of machinery and equipment, and industrial and construction activities was transferred to the nonagricultural sector. Detailed numerical adjustments are shown in table 11. United States: No adjustments were made to transfer from agricultural employment such farm activities as the repair of machinery and equipment, and logging operations of farmers. A Soviet economist, Ya. Ioffe, contends that United States agricultural employment statistics omit women who cook for hired laborers on farms, whereas in the U.S.S.R. employment of cooks in field camps is included. (Ya. Ioffe, "The Level of Labor Productivity in the U.S.S.R. and the U.S.A.", *Planovoye khozyaystvo [Planned Economy]*, No. 3, March 1960, p. 51.) Constructed series: Table 12. Household interview series: For all years except 1940, the subtraction of employment in private households from total employment and the nonagricultural sector is based on data given in the annual reports for this series. The 1940 estimate for employment in private households, 2,200,000, is based on national income data (U.S. Department of Commerce, Office of Business Economics, *National Income, 1954 Edition, A Supplement to the Survey of Current Business*, 1954, table 25, pp. 196 and 197). 1940: U.S. Department of Commerce, Bureau of the Census, *Statistical Abstract of the United States, 1960*, 1960, table 263, p. 205. 1950: U.S. Department of Commerce, Bureau of the Census, *Annual Report on the Labor Force, 1950*, Series P-50, No. 31, March 1951, table 9, p. 23. 1953: U.S. Department of Commerce, Bureau of the Census, *Annual Report on the Labor Force, 1954*, Series P-50, No. 59, April 1955, table C-9. 1955: U.S. Department of Commerce, Bureau of the Census, *Annual Report on the Labor Force, 1955*, Series P-50, No. 67, March 1956, table 12, p. 28. 1956: U.S. Department of Commerce, Bureau of the Census, *Annual Report on the Labor Force, 1956*, Series P-50, No. 72, March 1957, table 12, p. 28. 1957-60: U.S. Department of Labor, "Labor Force and Employment in 1960," by Robert L. Stein and Herman Travis, *Special Labor Force Report*, No. 14, table C-4, p. A-21. 1961: U.S. Department of Labor, "Labor Force and Employment in 1961," by Carol Kalish, Frazier Kellogg, and Matthew Kessler, *Special Labor Force Report*, No. 23, table C-4, p. A-20. 1962: U.S. Department of Labor, "Labor Force and Employment, 1960-1962," by Jane L. Meredith, *Special Labor Force Report*, No. 31, table C-4, p. A-18.

¹ BLS refers to the U.S. Department of Labor, Bureau of Labor Statistics; Census refers to the U.S. Department of Commerce, Bureau of the Census; NID refers to the U.S. Department of Commerce, Office of Business Economics, National Income Division.

² Beginning in 1960, all data include Alaska and Hawaii. For 1959, only BLS data based on establishment payroll records include Alaska and Hawaii.

³ Employment excludes that for private household workers since no employment estimates are available for the U.S.S.R. for domestics, day laborers, etc. Employment estimates for private household workers are reported in the former series of *Annual Reports on the Labor Force*, issued by the U.S. Department of Commerce, Bureau of the Census, and now in the *Special Labor Reports*, prepared by the U.S. Department of Labor, Bureau of Labor Statistics. A similar series for workers in private households is presented in the various National Income editions of the *Survey of Current Business*. In 1961, employment for private household workers was 2,594,000 (U.S. Department of Labor, "Labor Force and Employment in 1961," by Carol Kalish, Frazier Kellogg, and Matthew Kessler, *Special Labor Force Report*, No. 23, table C-4, p. A-20). In the National Income series, 1960 employment for full-time and part-time employees in private households is 2,662,000 (U.S. Department of Commerce, Office of Business Economics, *Survey of Current Business*, July 1961, table 53, p. 29). Employment also excludes that for prisoners. For the United States, there are no recent employment data for prisoners. A study of Federal and State prisons by the Bureau of Labor Statistics for fiscal year 1940 reported 191,776 prisoners, of whom: employed, 83,515; engaged in prison duties, 68,894; attended school, 11,868; sick or otherwise unavailable, 16,519; and idle, 10,980 (U.S. Department of Labor, Bureau of Labor Statistics, *Prison Labor in the United States, 1940*, by Richard F. Jones, Jr., Bulletin No. 698, 1941, table 5, p. 11). The reported population in Federal and State prisons at the end of 1960 was 213,142 (U.S. Department of Commerce, Bureau of the Census, *Statistical Abstract of the United States, 1962*, table 209, p. 160).

⁴ U.S. Department of Labor, Bureau of Labor Statistics, *Employment and Earnings*, Annual Supplement Issue, vol. 10, No. 3, September 1963, table B-1, p. 13.

⁵ 1940: Agriculture: Figure is reported in U.S. Department of Commerce, Bureau of the Census, *Statistical Abstract of the United States, 1960*, table 263, p. 205. Unpaid family employment (nonagricultural): Unpublished estimate from U.S. Department of Labor, Bureau of Labor Statistics. 1950: U.S. Department of Commerce, Bureau of the Census, *Annual Report on the Labor Force, 1950*, Series P-50, No. 31, March 1951, table 9, p. 23. 1953: U.S. Department of Commerce, Bureau of the Census, *Annual Report on the Labor Force, 1954*, Series P-50, No. 59, April 1955, table C-9, p. 49. 1955: U.S. Department of Commerce, Bureau of the Census, *Annual Report on the Labor Force, 1956*, Series P-50, No. 67, March 1956, table 12, p. 28. 1956: U.S. Department of Commerce, Bureau of the Census, *Annual Report on the Labor Force, 1956*, Series P-50, No. 72, March 1957, table 12, p. 28. 1957-1960: U.S. Department of Labor, "Labor Force and Employment in 1960," by Robert L. Stein and Herman Travis, *Special Labor Force Report*, No. 14, table C-4, p. A-21, 1961: U.S. Department of Labor, "Labor Force and Employment in 1961," by Carol Kalish, Frazier Kellogg, and Matthew Kessler, *Special Labor Force Report*, No. 23, table C-4, p. A-20. 1962: U.S. Department of Labor, "Labor Force and Employment, 1960-1962," by Jane L. Meredith, *Special Labor Force Report*, No. 31, table C-4, p. A-18.

⁶ Computed from various national income publications of the U.S. Department of Commerce, Office of Business Economics. The reported number of full-time equivalent employees, by industry, less those for farms, were subtracted from the number of persons engaged in production, by industry, less those for farms. 1940: U.S. Department of Commerce, Office of Business Economics, *National Income, 1954 Edition, A Supplement to the Survey of Current Business, 1954*, table 25, pp. 196 and 197, and table 28, pp. 202 and 203. 1950, 1953, 1955: U.S. Department of Commerce, Office of Business Economics, *U.S. Income and Output, A Supplement to the Survey of Current Business, 1958*, table VI-13, p. 211, and table VI-16, p. 214. 1956-1958: U.S. Department of Commerce, Office of Business Economics, *Survey of Current Business*, July 1960, tables 52 and 55, p. 29. 1959-60: U.S. Department of Commerce, Office of Business Economics, *Survey of Current Business*, July 1962, tables 52 and 55, p. 29. 1961-1962: U.S. Department of Commerce, Office of Business Economics, *Survey of Current Business*, July 1963, tables 52 and 55, pp. 33-34.

Part A. Elementary and secondary education

[NOTE.—Some of the tables contain higher education data]

TABLE VI-A-1.—Enrollment in schools and training programs of various types at all levels: U.S.S.R., selected years, 1914-15 to 1962-63

[Thousands of students at beginning of school year]

Schools and training programs	1914-15	1940-41	1952-53	1958-59	1959-60	1960-61	1961-62	1962-63
Total enrollment.....	10, 588	47, 547	47, 717	46, 057	48, 741	52, 600	56, 340	61, 268
General education schools of all types.....	9, 656	35, 552	32, 643	31, 483	33, 364	36, 187	39, 087	42, 445
Primary, 7-year, 8-year, and complete secondary schools.....	9, 656	34, 784	30, 953	29, 567	31, 046	33, 417	35, 813	38, 485
Schools for workers and rural youth and schools for adults (including correspondence study).....		768	1, 690	1, 916	2, 318	2, 770	3, 274	3, 960
Trade-technical and factory schools.....	106	717	774	904	996	1, 113	1, 266	1, 397
Secondary specialized educational institutions ¹	54	975	1, 477	1, 876	1, 908	2, 060	2, 370	2, 668
Higher educational institutions.....	127	812	1, 441	2, 179	2, 267	2, 396	2, 640	2, 944
Training programs for new trades and raising qualifications in factory and other courses (excluding political education).....	645	9, 491	11, 382	9, 615	10, 206	10, 844	10, 977	11, 814

¹ These are industrial technicums and other secondary specialized schools, providing vocational-technical training.

TABLE VI-A-2.—Schools of general education of all types, number of schools, enrollment, and number of teachers: U.S.S.R., 1952-53 and 1958-59 to 1962-63

[Figures in thousands (at beginning of school year)]

	1952-53	1958-59	1959-60	1960-61	1961-62	1962-63
Schools of general education of all types....	217	215	221	224	228	¹ 227
Total enrollment.....	32, 643	31, 483	33, 364	36, 187	39, 087	² 42, 445
Grades 1-4.....	13, 627	17, 779	18, 518	18, 659	18, 962	19, 428
Grades 5-7.....	14, 991	8, 938	10, 439	12, 271	13, 329	³ 18, 234
Grades 8-11.....	3, 900	4, 655	4, 285	5, 121	6, 644	⁴ 4, 596
Special schools for mentally and physically handicapped children.....	125	111	122	136	152	187
Teachers.....	1, 583	1, 900	1, 953	2, 043	2, 132	2, 234

¹ Includes over 25,000 (complete) secondary general education labor-polytechnical schools.

² Includes over 2,000,000 pupils enrolled in boarding schools and extended day schools and groups.

³ In grades 5-8.

⁴ In grades 9-11.

TABLE VI-A-3.—Primary, 7-year, 8-year, and complete secondary schools, number of schools, enrollment, and number of teachers: U.S.S.R., 1952-53 and 1958-59 to 1962-63

[At beginning of school year]

Source (tables 1-6): Data in the above 6 tables on education are from the following source: Narodnoe khoziaistvo S.S.S.R. v. 1962 g., statisticheskii ezhegodnik (National Economy of the U.S.S.R. in 1962, statistical yearbook), published by the Central Statistical Administration attached to the U.S.S.R. Council of Ministers, Moscow, 1963.

Part B. Higher Education

[NOTE.—The following education statistics (tables VI-B-1 to VI-B-20) have been updated wherever possible by recent data in official Soviet publications, made available after publication of the U.S. Office of Education Bulletin, 1963, No. 16, *Higher Education in the U.S.S.R.*, in which the translated tables first appeared. Also the State budget expenditure tables contain elementary and secondary education data.]

TABLE VI-B-1.—*Total State budget expenditures, and expenditures for specified education categories: U.S.S.R., 1961-65*

[The Soviet State budget for 1964-65 was announced in the Soviet press in December 1963; although the breakdown of the planned educational expenditures is not complete, available data are presented below, along with data for 1961-63]

Budget category	Billions of rubles				
	1961 (announced December 1960)	1962 (announced December 1961)	1963 (announced December 1962)	1964 (announced December 1963)	1965 (announced December 1963)
Total, State budget expenditures....	77.5	80.3	86.1	91.3	100.4
Education, training of cadres, science and culture, total.....	11.3	12.4	13.8	14.6	15.4
General education.....	3.5	¹ [4.3]	4.0	³ 4.3	-----
Preschool institutions (nurseries, kindergartens).....	1.2	1.4	1.6	1.7	1.9
Boarding and extended day schools.....	.6	.6	.7	(²)	-----
Higher educational institutions and technical schools.....	² 2.2	² 1.8	² 2.7	(⁴)	(⁴)
Scientific research and science.....	3.8	4.3	4.7	5.2	5.4

¹ This figure has been derived as a residual; it may include vocational as well as general education.

² The 1961 figure of 2,200,000,000 rubles includes vocational schools. The 1,800,000,000 figure for 1962 is not announced as including vocational schools. U.S.S.R. Minister of Finance, V. F. Garbuzov, stated (*Izvestia*, Dec. 7, 1961) that expenditures for higher educational institutions and technical schools for 1962 would be 7.9 percent higher than in 1961. The 1963 figure of 2,700,000,000 rubles apparently includes vocational schools.

³ The 1964 general education figure includes boarding schools.

⁴ The 1964 and 1965 figures are reported lumped together as "almost 4,000,000,000 rubles," excluding vocational schools which total "over 1,500,000,000" for the 2 years.

TABLE VI-B-2.—*Total State budget expenditures and expenditures budgeted for enlightenment: U.S.S.R., 1955 and 1958-62*

[Data for 1955-60 are from Narodnoe khoziaistvo v 1960 godu (National Economy in 1960), statistical year-book published by the Central Statistical Administration attached to the U.S.S.R. Council of Ministers, Moscow 1961. Pp. 846-847. The 1961-62 data, from the yearbooks published in 1962 and 1963]

Budget category	Millions of rubles					
	1955	1958	1959	1960	1961	1962
Total State budget expenditures.....	54,000 (100%)	64,300 (100%)	70,400 (100%)	73,100 (100%)	76,300 (100%)	82,200 (100%)
Total social-cultural expenditures.....	14,717 (27%)	21,418 (33%)	23,118 (33%)	24,937 (34%)	27,187 (36%)	28,967 (36%)
Enlightenment ¹ total (included in preceding line).....	6,894 (13%)	8,603 (13%)	9,412 (13%)	10,323 (14%)	11,349 (15%)	12,435 (15%)
1. General education and education of children and youth, and general adult education, total.....	3,354	3,979	4,435	5,002	5,606	6,208
(a) Kindergartens.....	361	525	600	697	824	1,001
(b) Children's homes and boarding schools for deaf and blind children.....	286	306	315	305	290	291
(c) General education schools of all types.....	2,520	2,779	2,998	3,262	3,599	3,913
2. Cultural-educational work.....	253	318	328	333	336	327
3. Training cadres, total.....	2,326	2,352	2,389	2,420	2,532	2,723
(a) Higher educational institutions.....	1,021	1,141	1,152	1,167	1,208	1,286
(b) Technicums and schools for training of cadres of secondary qualification.....	592	541	523	527	552	585
(c) Trade and railroad schools.....	166	187	220	262	312	337
(d) Factory schools.....	90	68	33	24		
(e) Technical schools.....	40	69	73	83	90	91
(f) [Other] factory, trade, and mechanical schools, schools for mechanization of agriculture.....	305	230	277	236	252	325

5. Press.....	62	88	88	74	75	68
6. Art and radio.....	74	129	122	105	90	92

¹ The Russian word "prosveshchenie" is translated here as "enlightenment." Soviet sources translate it as "education," leading to a conceptual error and overstatement of the total education budget.'

TABLE VI-B-3.—Number of specialists with higher education working in the national economy, by specialty; U.S.S.R., selected years, 1928-60

The 20 tables of statistics which follow have been selected and translated from Vysshie obrazovaniie v SSSR (Higher Education in the U.S.S.R.), a statistical compilation prepared and published in 1961 by the Central Statistical Administration, attached to the U.S.S.R. Council of Ministers, Moscow. Statistics are for the beginning of the school year, unless otherwise indicated.

Additional statistics, for the 1961-62 and 1962-63 school years have been added to a number of the tables. The source for these statistics is the 1962 and 1963 publications of the Central Statistical Administration, Narodnoe khoziaistvo SSSR (National Economy of the U.S.S.R.) in 1961 and in 1962.

[Figures in parentheses are percent of total]

1961.....	17,462	202	1,998.2	172
1962.....	18,468	214	2,116.9	182

¹ Expressed in terms of new rubles at 1955 prices. Sum of the value of production for each carrier. This was obtained by multiplying ton-kilometers by estimated average revenue for 1955 (new kopeks per ton-kilometer) as follows:

Railroads 0.448 (1).

Motor transport 8.78. Calculated from the rate per ton for class 2 freight (presumed typical) at the average haul distance in 1955, according to rates established July 1, 1955 (2).

Pipelines 0.20. Estimated same as cost per ton-kilometer, which was calculated from ton-kilometers and total costs (3).

Inland water 0.387. Cost plus profit (4).

Maritime 0.297. Estimated same as cost per ton (5).

Air 20.

SECTION VIII

NATIONAL INCOME ACCOUNTS

EXPLANATION OF TABLES RELATING TO NATIONAL INCOME ACCOUNTS*

The Soviet Union appears to have entered upon a period of secular deceleration in its growth following 1958 (table VIII-1). In the period 1950-58 its national product rose by an annual average of 6.8 percent, second only to West Germany among the major industrial economies. In no year since 1958 has this rate been attained and the average for the past 4 years has been only 4.6 percent, below the growth of Japan, Italy, and West Germany, and equal to that of France. Even if the unfavorable year of 1958 for the market economies be omitted from the comparison, the secular deceleration in growth has been far sharper for the U.S.S.R. than for other major economies. On a per capita basis the performance of the Soviet economy is even less favorable, in recent years being below Japan and the large continental economies.

The reduced pace of Soviet growth can be explained in part by examining the performance of the three sectors which originate over 80 percent of GNP—industry, agriculture, and services (table VIII-2). During the 1958-62 period industrial output was increasing by somewhat more than 7 percent per year compared with over 10 percent for the preceding 8 years. Agricultural production has nearly stagnated compared to an annual growth of over 5 percent in the previous period. The services have moved contrary to the general trend, rising over 4 percent a year compared with only about 1 percent for the earlier years. What decline has occurred in military services has been more than offset by accelerations in educational, medical, housing, and especially scientific services.

If provisional information for 1963 is introduced, an even slower growth than for 1962 appears. The record of the past 2 years is below the long-term trend as it is heavily influenced by two disastrous agricultural years in succession. If weather factors are discounted and it is assumed that the agricultural growth trend for 1958-61 would have prevailed under normal conditions, the growth of Soviet GNP would have been close to 5.0 percent. Even this normalized rate, however, still represents a substantial decline over the performance of the early and middle 1950's.

Part of the explanation for the decline in the rate of growth lies in a less favorable manpower situation, the rate of increase in employment having declined to 1.3 from 1.7 percent, but more striking has been the declining rate of productivity advancement, even if cyclical weather influences are removed. In this respect, too, the reduction in the Soviet rate of increase is the largest of the seven economies (table VIII-3).

There has been a noticeable decline in the rate of increase in per capita consumption, largely the result of the stagnation in farm output (table VIII-4) and to a lesser extent because of the decline in new housing construction. During the 1958-62 period the rate of growth was less than that for German and Italian and about equal to French consumers, all of whom enjoy considerably higher real living standards (see table VIII-5) than their Soviet counterparts. The rate of increase in investment also fell significantly contrary to the experience of

*A considerable portion of the methodology and data included in this section was originally presented in the author's contribution to the 1962 compendium of the committee, "*Dimensions of Soviet Economic Power*," pp. 67-90.

the other major economies. During the past 3 years the rate has averaged little better than 5.0 percent. Of equal importance is the sharply reduced return on investment. In the earlier period the Soviet Union obtained about the same increase in output per employee from a unit of nonhousing investment as did France and Germany, though less than that of Japan. Since 1958 the productivity of investment has been much less, in fact, the lowest (highest marginal capital-output ratio) of all major economies except the United Kingdom. This decline might be explained by a shift of investment from industry and agriculture into the service sectors (education, health, municipal facilities, science, etc.) with their slow payoffs and within industry out of coal, electric power, and machinery into the unfamiliar chemical technology.

In 1962 the U.S.S.R. was the world's second largest economy with a GNP approximately 46 percent the size of the United States and approximately equal to that of the principal Common Market economies combined (table VIII-5). In per capita terms its relative position is less favorable—about three-eighths of the United States, more than a third below France, Germany, and the United Kingdom, about equal to Italy, and a third higher than Japan. Soviet allocation priorities are graphically illustrated by relative per capita consumption levels. With unmeasured Japan excluded, Soviet consumption levels are only a quarter of those of the United States, half those of France, Germany, and the United Kingdom, and about 80 percent of Italy's. As would be expected in an economy in which growth is part of the ideology, the investment position of the U.S.S.R. is more favorable—about three-fourths of the U.S. level and above that of the major Western European market economies other than Germany. The really striking Soviet resource priority is found in defense. Its per capita level is two-thirds as high as that of the United States and about double the average for France, Germany, and Italy.

Soviet resource priorities are also emphasized in comparisons of industrial output (table VIII-6). Soviet industrial production (value added) in 1962 bears about the same ratio to U.S. output as does GNP, about 48 percent. While total output is approximately double the level of the nearest West European producer, the United Kingdom, its industrial output per employee is about equal to that of the three leading West European economies and about a third of the U.S. level. In per capita terms (a rough indicator of the degree of industrialization) its position is lower than that of the three largest West European economies.

The projections for the OECD countries and Japan are the official national target estimates submitted to the OECD within its overall growth rate of 4.5 percent per annum and the official Japanese plan goal (table VIII-7). Japan and the continental economies in the first 3 years of the decade have either exceeded or nearly matched targeted growth rates. Given prospective labor force increments and productivity advances they should be able to achieve their growth goals. The United Kingdom has lagged in its growth performance. However, the establishment of comprehensive national planning under the National Economic Development Council with a 4-percent growth rate set for 1961-66 and a 4.5-percent rate for the latter part of the decade, presumably supported by Government policies, implies that Britain should meet the OECD target rate and probably exceed it. The U.S. upper limit projection presumes that unemployment will be reduced to

4 percent of the labor force even though the rate of new additions to the labor force will be almost double that of the previous decade, and that fuller use of resources will stimulate accelerated productivity advances. Our inability thus far to realize the assumptions casts doubt on the ability of the United States to meet its growth target. Continuation of recent employment and productivity performance imply a GNP growth rate for the United States of about 3.6 percent, the average for 1947-62.

There being no official Soviet growth target beyond 1965, except for the ephemeral 20 year goals set for 1980, and a major difference in Soviet and western concepts of national product, the projection of Soviet GNP growth is based on recent historic trends. If the premise that 1958 represented a kink in the Soviet growth path is assumed, then the base for extrapolation should lie in the post-1958 period. In view of the nonrepetitive measures adopted during the past decade to increase labor force participation and the high participation of women in remunerative employment, it is unlikely that employment can be increased much beyond the 1.2 percent annual increment projected in the labor force. As for productivity expectations, a minimum would appear to be established by the 1958-62 performance with its 7 percent industrial growth rate and virtual stagnation in agriculture. The upper limit presumes the same industrial growth rate but resumption of the 2 percent annual growth in agricultural output which prevailed from 1958-61 before adverse weather factors intervened. Both rates also assume that growth in nonmilitary services will continue to be rapid, as seems fitting to an economy of increasing sophistication and sensitivity to consumer requirements.

The likelihood of the growth rate disparity between the U.S.S.R. and the United States being closed is, therefore, contingent upon the extreme assumptions of maximum United States and minimum Soviet growth rates (table VIII-7). A more probable set of projections would see the disparity being narrowed from the respective performances of the 1950's, but with Soviet expansion still exceeding that of the United States by 1 to 1½ percent. However, the Soviet Union will grow little or no faster than France and Italy and considerable slower than Japan.

¹ For alternative calculations of growth, see 3d paragraph in following methodological discussion.

SOURCES AND METHODOLOGY

1955 weights

The sector weights are based initially on the distribution of Soviet national income by sector of origin at adjusted prices (factor cost) in Morris Bornstein and others, "Soviet National Accounts for 1955," Center for Russian Studies, University of Michigan, 1961 (p. 84). The weight of their statistical discrepancy has been distributed among the component sectors on the basis of supplementary information, largely manpower statistics, as to the distribution of residual factor payments. The Bornstein calculation makes no allowance for a factor return of rent on superior land. Although procurement prices at which farm products are purchased by state agencies make no allowance for rent, there is no corresponding saving in the prices paid by retail consumers of processed farm products since retail prices include large turnover taxes. Therefore, for purposes of international comparability some upward adjustment should be made to agricultural incomes to include the omitted land rent. D. Gale Johnson has computed the ratio between land rent and agricultural labor income in the United States for the years 1910-14 and 1940-44 (Journal of Farm Economics, November 1948, p. 742). The average ratio for these two periods is around 40 percent. Johnson obtained similar results for other economies with varying states of development. On this basis the Bornstein estimate of agricultural factor payments has been increased by 40 percent. The weights of the nonagricultural sectors have been reduced in proportion to the increase in the agricultural weight.

Because of its large share in total product the size of the agricultural weight selected exerts an important influence on trends in calculated GNP. The magnitude of the agricultural weight depends in turn upon controversial assumptions as to the treatment of land rent and the valuation of farm income-in-kind. While experimental indexes using different weights for agriculture indicate imperceptible differences in longrun trends of GNP during the postwar years, there are marked differences in individual years characterized by adverse or unusually favorable weather conditions.

If no imputation is made for agricultural rent on the grounds that no Soviet data is available for an adjustment and that some rent payment may be included in the evaluation even though not explicitly costed, the agricultural weight in table 1 would be reduced to 27.1 from 36.2. The GNP index for 1962 (1958=100) would be unchanged but the link relative for 1958 would be reduced to 9.6 from 9.9 percent and that for 1962 increased to 3.0 from 2.2 percent.

Derivation of sector indexes

Industry.—See table III-7, Civilian Production.

Construction.—Indexes in 1955 prices of state and cooperative (p. 44), collective farm (p. 164), and private housing (pp. 188-189) in Tsentral'noe Staticheskoe Upravlenie, "Kapital'noe Stroitel'stvo v S.S.S.R." (Central Statistical Administration, "Capital Investment in the U.S.S.R."), Moscow, 1961, for data through 1960; 1961 and 1962 data from same author, "Narodnoe Khoziaistvo S.S.S.R. v 1962 Godu" ("National Economy of the U.S.S.R. in 1962"), (pp. 433, 437).

Agriculture.—See table II-9.

Transportation.—The index of ton-kilometers of railroad traffic is used to represent all traffic. Over the period the dominant rail proportion remains almost unchanged as a share of total freight traffic. Data obtained from "Narodnoe Khoziaistvo S.S.S.R. v 1962 Godu" (p. 379).

Communications.—Total revenues of communications sector, "Narodnoe Khoziaistvo, 1962," p. 422.

Trade.—Value added in trade is assumed to be represented by the index of wages and profits in unchanged prices. The 1955 base year wage figure is derived from Ts.S.U., "Sovetskaia Torgovlia" (Soviet Trade), Moscow, 1956 (pp. 114, 121, 123). It is moved by indexes of employment in trade obtained from "Narodnoe Khoziaistvo, 1958" (p. 659), "Narodnoe Khoziaistvo, 1962" (p. 453). The profit figures are obtained from "Narodnoe Khoziaistvo, 1962" (p. 627).

Services.—Indexes for service subsectors are based on employment trends. As such, they exclude productivity improvements and thereby understate trends in value added. The defense manpower estimates are obtained from "Dimensions

of Soviet Economic Power" (p. 43), the column on million man-years. The employment trends for the other subsectors are obtained from "Narodnoe Khoziaistvo, 1958" (p. 659); and "Narodnoe Khoziaistvo, 1962" (p. 453).

¹ 1953-58 for earlier period.

² Some adjustment must be introduced to reflect the impact of arms production not included in the computed index. According to Greenslade and Wallace in "Dimensions of Soviet Economic Power," p. 123, if arms production is added to the computed civilian industrial production index, the latter trend is increased between 1950 and 1952, reduced between 1952 and 1957, and increased after 1957. Application of their suggested numerical adjustments to my calculated GNP trend would yield the noted average growth rates.

SOURCES

OECD countries: (France, Germany, Italy, United Kingdom, United States) GNP, 1950-61. OECD, General Statistics, September 1962. 1962, Economic Commission for Europe, Economic Survey of Europe in 1962, p. II-3. OECD, Economic Surveys of the OECD-France, July 1963, p. 5. Population, OECD, Manpower Statistics, 1950-60, and OECD, General Statistics, September 1963, p. 33.

Japan: GNP, Bank of Japan, Economic Statistics Monthly, October 1963, pp. 156-157. Population, same source p. 9.

U.S.S.R.: GNP. (See table VIII-1.) Population, 1950-61, from Joint Economic Committee, U.S. Congress, "Dimensions of Soviet Economic Power," p. 615. 1962 estimate from Table I-1.

TABLE VIII-3.—Role of increases in employment and labor productivity in comparative growth of GNP (average annual rates)

Country	GNP	1950-58 employment	Productivity	GNP	1958-62 employment	Productivity ¹
France.....	4.4	0.4	4.0	4.8	0.9	3.8
Germany (Federal Republic).....	7.6	2.4	5.1	6.2	1.4	4.8
Italy.....	5.6	1.6	3.9	7.2	1.2	5.9
United Kingdom.....	2.4	.4	1.9	2.8	.8	2.0
Japan ²	6.1	2.1	4.0	13.2	1.6	11.5
U.S.S.R.....	6.8	1.7	5.0	4.6	1.3	3.3
United States.....	2.9	1.0	1.9	4.3	1.5	2.7

¹ Index of GNP ÷ index of employment expressed in man-years. No adjustment has been made for reductions in working hours. In the 2 time periods under consideration there was a larger reduction in annual hours worked in manufacturing in the U.S.S.R., 13 percent ("Narodnoe Khoziaistvo S.S.S.R. v 1962 Godu," p. 488) than in the other economies—France, 0.5; Germany, 7.8; United Kingdom, 2.5; and the United States, 3.2 percent (OECD, Productivity Measurement Review, November 1962, p. 12). Japanese working hours rose by 3.9 percent (Japan, Ministry of Foreign Affairs, "Statistical Survey of Economy of Japan, 1962," p. 11). Therefore, in terms of man-hours Soviet productivity accomplishments are relatively understated, but a precise adjustment cannot be made in the absence of information on hours of work in nonmanufacturing occupations for most of the countries in the comparison.

² 1953-58 for earlier comparison.

SOURCES

OECD countries: GNP. (See table VIII-2.) Employment, 1950-61, OECD, Economic Surveys by the OECD—France, July 1962, p. 7. 1962, ECE, Economic Survey of Europe, 1962, p. 11-19.

Japan: GNP. (See table VIII-2.) Employment. (See source for population estimate in table VIII-2.)

U.S.S.R.: GNP. (See table VIII-1.) Employment. (See table V-A-3.)

TABLE VIII-4.—Comparative growth of consumption and investment (average annual rates)

Country	Consumption per capita		Investment		Marginal capital/output ratios ¹	
	1950-58	1958-62	1950-58	1958-62	1950-58	1958-62
France.....	3.3	2.9	5.5	5.4	3.4	3.6
Germany (Federal Republic).....	6.3	5.7	9.6	9.7	3.2	3.9
Italy.....	3.1	5.6	8.2	11.0	3.8	2.7
United Kingdom.....	1.6	1.9	4.4	5.5	5.9	6.4
Japan ²	2.3	7.5	7.7	22.6	1.5	.9
U.S.S.R.....	5.0	3.0	10.8	7.7	3.3	6.2
United States.....	1.1	1.6	1.3	4.1	6.3	5.3

¹ Increase in nonhousing investment required to obtain a unit of increase in output per employee. The lower the ratio the higher the return (productivity) of investment. The ratio is increased to the extent unutilized productive capacity exists. Thus the apparent decrease in the U.S. ratio in the later period reflects the utilization of capacity idled during the 1958 recession.

² 1953-58 for the earlier period comparison.

³ Not available.

SOURCES AND METHODOLOGY

GNP

OECD: The 1962 breakdown of GNP is initially expressed in the countries' own currencies. These estimates are based on 1961 estimates in OECD, General Statistics, September 1963 moved to 1962 by link relatives obtained from ECE, "Economic Survey of Europe, 1962," (p. II-3). Ratios for converting these estimates to dollars are initially based on 1950 ratios in Gilbert and Kravis, "An International Comparison of National Products and the Purchasing Power of Currencies," OEEC, Paris, 1954. The geometric mean of United States and European weighted ratios are used. The ratios are moved to 1962 by the quotients of relevant European prices indexes divided by U.S. prices indexes. The price indexes can be derived from the previously cited General Statistics volume as the ratios between values expressed in terms of both current and constant prices.

Japan: The same methodology is followed for Japan. The 1961 division of GNP in yen and 1962 link relatives are obtained from Bank of Japan, Economic Statistics Monthly, October 1963. A 1960 geometric conversion ratio has been constructed by Irving Kravis in Journal of Political Economy, August 1963 (p. 327). This ratio is expressed in 1961 prices by the same procedure used for the OECD economies.

U.S.S.R.: The same methodology is followed for the U.S.S.R. The 1962 division of GNP in 1955 rubles is obtained in the manner described in footnotes to

table 4, with the 1962 defense link relative derived in similar fashion from the 1962 state budget as the earlier estimates, as noted in "Dimensions of Soviet Economic Power" (p. 72).

The procedure for converting 1955 rubles into dollars has been described in "Dimensions" (p. 76). There is no available Soviet price index for moving the ratio to 1962 values, but available scattered statistics indicate little change in price levels for national income (1959 to 1962) and for 1955 to 1962 for industrial products and consumer goods sold in state outlets. Therefore, the movement in geometric ruble-dollar ratios from 1955-62 are assumed to be only a function of changes in U.S. prices.

Population estimates

See footnotes to table VIII-2.

TABLE VIII-6.—Industrial output per employee, 1962

¹ Value added in manufacturing, mining, and electric and gas utilities.

² Wage and salaried employees.

SOURCES AND DERIVATIONS OF ESTIMATES

OECD: Value added relationships for European OECD economies in 1959 obtained from OEEC, Industrial Statistics, 1900-1959 (p. 4); 1953 ratio of U.S. and Common Market economies industrial value added (OECD, General Statistics, September 1963, p. 2) moved to 1959 by respective industrial production indexes; 1959 weights moved to 1962 by respective industrial production indexes (OECD, General Statistics, September 1963, p. 2); 1962 value of value added in U.S. manufacturing, mining, and public utilities obtained from U.S. Department of Commerce, Survey of Current Business, September 1963 (p. 10).

Employment data from OECD "Manpower Statistics 1900-1960," ECE, "Economic Survey of Europe in 1962" (p. II-19), and Survey of Current Business, July 1963 (p. 33).

Japan: 1953 ratio of Japanese and Common Market industrial value added (National Institute Economic Review, November 1963, p. 89) moved to 1962 by respective production indexes (Bank of Japan, Monthly Statistics, October 1963, p. 17).

Employment from ECAFE, "Economic Survey of Asia and the Far East in 1962" (p. 188). Excludes utilities and is average of first three quarters.

U.S.S.R.: Estimate of Allen Dulles of Soviet industrial output as one-third of United States in 1955 (Joint Economic Committee, U.S. Congress, "Dimensions of Soviet Economic Power," p. 127) moved to 1962 by respective industrial production indexes.

Employment estimate sourced in table VIII-3.

TABLE VIII-7.—Comparative projections of GNP

Country	Projected ¹ average annual growth rate, 1960-70	Performance, ² 1960-63
France.....	5.0	5.1
Germany (Federal Republic).....	4.1	3.0
Italy.....	5.6	6.3
United Kingdom.....	3.3	2.4
Japan.....	7.2	10.2
U.S.S.R.....	4.5-5.0	3.5
United States.....	3.6-4.6	3.8

¹ For OECD countries rates represent official national projections of growth within overall OECD target of 4.5 percent OECD, "Policies for Economic Growth," Paris, 1962, p. 28. Lower U.S. estimate is annual average for 1947-62.

The projection for Japan is the official plan goal, Japan, Economic Planning Agency, "New Long Range Economic Plan of Japan, 1961-70," Tokyo, 1961, p. 2.

The U.S.S.R. projection represents a range bounded at the lower limit by the average annual rate of growth of GNP per employee from 1958-62 of 3.3 percent (table VIII-3) and at the upper limit the rate which would have been achieved had agricultural output continued to rise by the 2.2 percent average annual increase of 1958-61—3.7 percent. When these 2 GNP productivity projections are multiplied by the 1.2 percent growth projected for the labor force ("Dimensions of Soviet Economic Power, p. 88) the range of growth for GNP is derived.

² France, Germany, Italy—1963 estimates from European Economic Community, Economic Situation in the Community, September 1963, pp. 35, 46, 59.

United Kingdom—Estimate on 1963 from National Institute of Economic and Social Research, National Institute Economic Review, November 1963, p. 5.

United States—U.S. Department of Commerce, Office of Business Economics, *Survey of Current Business*, January 1964.

Japan—1963 preliminary estimate of Economic Planning Agency.

U.S.S.R.—1963 estimate based on preliminary calculations of industrial and agricultural performance and assumption of continuation of 1962 rate of growth for other origin sectors, except for deceleration in services from 4.9 to 4.5 percent to reflect resumption of military demobilization.

TABLE. X-B-2.—Free world trade with the European Soviet bloc, by country groups and areas, 1961-62 and January-June 1963

[In millions of dollars]

Groups and areas	U.S.S.R.	European satellites
Exports, total:		
1961.....	1,524.8	2,313.0
1962.....	1,770.5	2,322.1
COCOM countries, total:		
1961.....	821.4	1,354.5
1962.....	897.5	1,397.7
January to June 1963.....	422.3	708.8
European COCOM countries:		
1961.....	686.2	1,185.2
1962.....	724.8	1,233.6
January to June 1963.....	346.9	609.3
Other Europe:		
1961.....	282.6	459.7
1962.....	391.9	453.7
Near East:		
1961.....	110.0	169.1
1962.....	94.7	140.9
Africa:		
1961.....	28.8	49.3
1962.....	33.6	60.6
Far East, except Japan:		
1961.....	224.5	120.5
1962.....	254.0	144.2
Oceania:		
1961.....	23.1	46.2
1962.....	32.1	32.7
Latin America:		
1961.....	34.4	113.7
1962.....	66.7	92.3
Imports, total:		
1961.....	1,593.6	2,259.7
1962.....	1,753.8	2,318.1
COCOM countries, total:		
1961.....	952.4	1,289.4
1962.....	1,015.7	1,344.8
January to June 1963.....	477.1	714.6
European COCOM countries:		
1961.....	781.0	1,194.0
1962.....	850.6	1,252.4
January to June 1963.....	399.3	666.6
Other Europe:		
1961.....	319.7	458.5
1962.....	355.5	459.0
Near East:		
1961.....	143.1	163.5
1962.....	112.8	190.8
Africa:		
1961.....	23.8	87.8
1962.....	40.7	77.4
Far East, except Japan:		
1961.....	119.7	138.9
1962.....	187.1	135.8
Oceania:		
1961.....	2.6	12.0
1962.....	1.6	11.9
Latin America:		
1961.....	32.3	109.6
1962.....	40.4	68.4

NOTE.—The above country group and area totals include values for all the countries in the free world, for which figures are available, that are known to have exported to or imported from Sino-Soviet bloc countries \$1,000,000 or more in any year since 1955. Figures for 1962 are preliminary and in some cases incomplete.

The Coordinating Committee in Paris (COCOM) coordinates strategic trade controls of the following countries: Total COCOM—United States, Canada, Japan, and European COCOM, i.e., Belgium, Denmark, France, Federal Republic of Germany, Greece, Italy, Luxembourg, Netherlands, Norway, Portugal, Turkey, and United Kingdom.

Free world trade does not include the trade of Cuba.

- 1 Total excludes Albania whenever data are not available.
 2 Not available.
 3 Includes area sown under wheat, rye, rice, barley, oats, corn.
 4 1949 data.
 5 No area sown.
 6 Less than smallest unit reported.

- 7 League of Nations estimate.
 8 Includes area sown under lucerne, red clover, mixture of oats and vetches, cattle turnips, and maize for silage.

Sources: Official statistics of the Sino-Soviet bloc countries; League of Nations statistical yearbooks.

* Total does not include Albania whenever data for Albania are not given.

† Not available.

‡ Includes wheat, rye, rice, barley, oats, corn.

§ 1949 data.

¶ No production.

‡ Less than smallest unit recorded.

‡ League of Nations estimate.

* For lack of data on cotton production, the figures on state purchases from domestic sources are shown.

† Includes lucerne, red clover, mixture of oats and vetches, cattle turnips, and maize for silage.

Part A

SELECTED BIBLIOGRAPHY OF RECENT SOVIET MONOGRAPHS

This bibliography is limited primarily to monographs which have been examined in the course of this compiler's pursuits in the fields of Soviet economics, labor force, and population. With several exceptions, the selection is restricted to those monographs which have appeared since 1959. Entries marked with an asterisk (*) have been added to the original bibliography appearing in Joint Economic Committee, *Dimensions of Soviet Economic Power*, 1962, pp. 671-688. Relatively few purely technical books are included, and statistical handbooks are omitted entirely.

The bibliography is arranged according to subject and branch of the national economy. The subject listing is in alphabetical order, whereas the branch listing approximates the sequence used in Soviet statistical handbooks. Each entry appears only once in either the subject or branch classification. The arrangement within the subject listing and the branch listing is as follows:

SUBJECT LISTING

Background
Capital Investment
Communist Party
Cooperatives
Cost of Production
Economy—General
Geography, Urbanization, Location of Industry
Input-Output
International Comparisons
Labor
Law
Level of Living
National Income, State Budget, Taxes
Planning
Population and Vital Statistics
Prices
Regional Economy
Statistics, Accounting, Mechanized Data Processing
Trade Unions
Wages

BRANCH LISTING

Agriculture

Industry—General

Electric Power

Fuels

Metallurgy

Machine Building and Metalworking

Chemical

Construction Materials

Logging, Woodworking, and Paper

Light

Food

Construction

Forestry

Transportation—General

Railroad

Automotive

Sea

River

Air

Communications

Trade and Material-Technical Supply

Public Health

Education

Science and Scientific Services

Banking

Government

Housing-Communal Economy

Armed Forces

SUBJECT LISTING

BACKGROUND

1. Akademiya nauk SSSR, Institut ekonomiki. *Postroyeniye fundamenta sotsialisticheskoy ekonomiki v SSSR, 1926-1932 gg.* (*Building the Foundation of the Socialist Economy in the U.S.S.R., 1926-1932*). Edited by I. A. Gladkov. Moscow, Izdatel'stvo Akademii nauk SSSR, 1960. 575 pp.
2. ———, ———. *Sovetskoye narodnoye khozyaystvo v 1921-1925 gg.* (*The Soviet National Economy in 1921-1925*). Edited by I. A. Gladkov. Moscow, Izdatel'stvo Akademii nauk SSSR, 1960. 560 pp.
3. ———, Institut istorii. *Materialy po istorii SSSR, tom VII, Dokumenty po istorii sovetskogo obshchestva.* (*Materials on the History of the U.S.S.R., Volume VII, Documents on the History of the Soviet Society*). Edited by D. A. Chugayev et al. Moscow, Izdatel'stvo Akademii nauk SSSR, 1959. 488 pp.

CAPITAL INVESTMENT

4. Akademiya nauk Belorusskoy SSR, Institut ekonomiki. *Osnovnyye fondy promyshlennosti i ikh ispol'zovaniye.* (*Basic Funds in Industry and Their Utilization*). Edited by M. G. Matusevich and O. N. Pashkevich. Minsk, Izdatel'stvo Akademii nauk BSSR, 1960. 204 pp.
5. Akademiya nauk SSSR, Institut ekonomiki and VTsSPS—VSNTO, Komitet ekonomiki i organizatsii proizvodstva. *Ekonomicheskaya effektivnost' kapital'nykh vlozheniy i novoy tekhniki.* (*Economic Effectiveness of Capital Investments and New Techniques*). Edited by T. S. Khachaturov et al. Moscow, Sotsekgiz, 1959. 616 pp.
- *6. ———, Nauchnyy sovet po effektivnosti osnovnykh fondov, kapital'nykh vlozheniy i novoy tekhniki. *Kapital'nyye vlozheniya i rezervy ikh ispol'zovaniya* (*Capital Investments and Reserves for Their Utilization*). Edited by T. S. Khachaturov. Moscow, Izdatel'stvo Akademii nauk SSSR, 1963. 280 pp.

7. —, Nauchnyy sovet po probleme ekonomicheskoy effektivnosti kapital'nykh vlozheniy i novoy tekhniki, Institut ekonomiki. *Metody i praktika opredeleniya ekonomicheskoy effektivnosti kapital'nykh vlozheniy i novoy tekhniki, Sbornik nauchnoy informatsii, Vypusk 1 (Methods and Practice in Determining the Economic Effectiveness of Capital Investment and New Techniques, Collection of Scientific Information, Issue 1)*. Edited by T. S. Khachaturov. Moscow, Izdatel'stvo Akademii nauk SSSR, 1961. 94 pp. Issue 2 (1962). 160 pp.
8. —, Otdeleniye ekonomicheskikh, filosofskikh i pravovykh nauk. *Sotsial'no-ekonomicheskkiye problemy tekhnicheskogo progressa (Socio-Economic Problems of Technical Progress)*. Edited by V. P. D'yachenko et al. Moscow, Izdatel'stvo Akademii nauk SSSR, 1961. 480 pp.
- *9. Andrianov, D. P. *Ekonomicheskaya effektivnost' kapital'nykh vlozheniy v mashinostroyeniі (Economic Effectiveness of Capital Investments in Machine-Building)*. Moscow, Mashgiz, 1963. 192 pp.
10. Bunich, P. G. *Osnovnyye fondy sotsialisticheskoy promyshlennosti. (Basic Funds of Socialist Industry)*. Moscow, Gosplanizdat, 1960. 304 pp.
- *11. —, *Puti uluchsheniya ispol'zovaniya osnovnykh fondov (Means for Improving the Use of Basic Funds)*. Issued by the Scientific Research Financial Institute. Moscow, Gosfinizdat, 1962. 141 pp.
- *12. Burshteyn, G. Ya. *Osnovnyye fondy ugol'noy promyshlennosti (Basic Funds of the Coal Industry)*. Moscow, Gosgortekhzdat, 1963. 212 pp.
13. Georgiyevskaya, N. A. and R. M. Merkin. *Osnovnyye fondy v stroitel'stve i puti uluchsheniya ikh ispol'zovaniya (Basic Funds in Construction and Means for Improving Their Utilization)*. Moscow, Gosstroyizdat, 1962. 160 pp.
- *14. Kolosov, A. F. *Osnovnyye fondy i ikh rol' v sotsialisticheskoy vosproizvodstve (na primere promyshlennosti) (Basic Funds and Their Role in Socialist Growth [By the Example of Industry])*. Moscow, Sotsekiz, 1963. 248 pp.
15. Kvasha, Ya. B. *Amortizatsiya i sroki sluzhby osnovnykh fondov (Amortization and the Length of Service of Basic Funds)*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow. Izdatel'stvo Akademii nauk SSSR, 1959. 228 pp.
- *16. —. *Kapital'nyye vlozheniya i osnovnyye fondy SSSR i SShA (Capital Investment and Basic Funds in the U.S.S.R. and U.S.A.)*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Izdatel'stvo Akademii nauk SSSR, 1963. 264 pp.
17. Nauchno-issledovatel'skiy ekonomicheskii institut Gosekonomsoвета SSSR *Ekonomicheskaya effektivnost' mekhanizatsii i avtomatizatsii proizvodstva (Economic Effectiveness of the Mechanization and Automation of Production)*. Edited by A. D. Yemel'yanov and A. S. Tolkachev. Moscow, Ekonomizdat, 1962. 348 pp.
18. —. *Ispol'zovaniye osnovnykh proizvodstvennykh fondov v promyshlennosti SSSR (The Utilization of Basic Production Funds in U.S.S.R. Industry)*. Edited by K. A. Petrosyan. Moscow, Ekonomizdat, 1962. 212 pp.
- *19. Ostroumov, V. S. and A. V. Shevchuk. *Osnovnyye fondy SSSR (Voprosy metodologii ucheta i statistiki) (Basic Funds of the U.S.S.R. [Questions of the Methodology of Recordkeeping and Statistics])*. Moscow, Gosstatizdat, 1963. 192 pp.
20. Smekhov, B. M. *Planirovaniye kapital'nykh vlozheniy (Planning Capital Investments)*. Moscow, Gosplanizdat, 1961. 335 pp.
- *21. Turetskiy, L. S. and O. A. Novikov. *Amortizatsiya osnovnykh fondov morskogo transporta (Amortization of the Basic Funds of Sea Transport)*. Moscow, Izdatel'stvo "Morskiy Transport," 1963. 126 pp.
22. Veduta, N. I. *Ob ekonomicheskoy effektivnosti kapital'nykh vlozheniy v promyshlennosti (On the Economic Effectiveness of Capital Investments in Industry)*. Issued by the Academy of Sciences BSSR, Institute of Economics. Minsk, Izdatel'stvo Akademii nauk BSSR. 1960. 348 pp.
- *23. Vsesoyuznaya ordena Lenina akademiya sel'skokhozyaystvennykh nauk imeni V. I. Lenina, Otdeleniye ekonomiki i organizatsii sel'skokhozyaystvennogo proizvodstva. *Ekonomicheskaya effektivnost' kapital'nykh vlozheniy v sel'skoye khozyaystvo (Economic Effectiveness of Capital Investments in Agriculture)*. Moscow, Ekonomizdat, 1962. 364 pp.

COMMUNIST PARTY

24. Akademiya obschestvennykh nauk pri TsK KPSS, Kafedra istorii KPSS. *Nekotoryye voprosy organizatsionno-partiynoy raboty v sovremennykh usloviyakh (Iz opyta raboty partiynykh organizatsiy po vypolneniyu resheniy XX i XXI s'yezdov KPSS) (Some Questions of Organizational-Party Work Under Current Conditions [From the Experience of Party Organizations in the Fulfillment of the Decisions of the XX and XXI Congresses of the Communist Party of the Soviet Union])*. Edited by K. I. Suvorov et al. Moscow, Izdatel'stvo VPSH i AON pri TsK KPSS, 1961. 448 pp.
- *25. Khrushchev, N. S. *Stroitel'stvo kommunizma v SSSR i razvitiye sel'skogo khozyaystva (Construction of Communism in the U.S.S.R. and the Development of Agriculture)*. Moscow, Gospolitizdat. Volume 1, *September 1953-January 1955* (1962). 496 pp. Volume 2, *February 1955-January 1958* (1962). 535 pp. Volume 3, *January 1958-May 1959* (1962). 544 pp. Volume 4, *May 1959-February 1961* (1963). 480 pp. Volume 5, *February 1961-October 1961* (1963). 464 pp. Volume 6, *October 1961-March 1962* (1963). 480 pp. Volume 7, *March 1962-March 1963* (1963). 496 pp.
- *26. Leningradskaya vysshaya partiynaya shkola. *Voprosy partiynogo stroitel'stva, Sbornik lektsiy (Questions of Party Construction, A Collection of Lectures)*. Compiled by A. P. Filippov. Leningrad, Lenizdat, 1962. 768 pp.
- *27. Malin, V. N. et al. (Eds.). *Spravochnik partiynogo rabotnika (Handbook for Party Personnel)*. Issue 4. Moscow, Gospolitizdat, 1963. 736 pp.
- *28. Tsagolov, N. A. (Ed.). *Kurs politicheskoy ekonomii (A Course in Political Economy)*. Moscow, Ekonomizdat. Tom I, *Dosotsialisticheskiye sposoby proizvodstva (Volume I, Pre-Socialist Means of Production)*. 1963. 707 pp. Tom II, *Sotsializm (Volume II, Socialism)*. 1963. 672 pp.
- *29. Tursunbayev, A. B. (Ed.). *Bor'ba KPSS za osvoyeniye Tseliny (The Campaign of the Communist Party of the Soviet Union to Master the Virgin Lands)*. Alma-Ata, Kazakhskoye gosudarstvennoye izdatel'stvo, 1960. 404 pp.

COOPERATIVES

30. Bulatov, I. G. *Kooperatsiya i yeye rol' v podgotovke sploshnoy kollektivizatsii (Cooperation and Its Role in the Preparation for Complete Collectivization)*. Moscow, Sotsekgiz, 1960. 200 pp.
31. Tenenbaum, M. V. *Statistika sovetskoy potrebitel'skoy kooperatsii (Statistics of Soviet Consumers' Cooperatives)*. Third revised and enlarged edition. Moscow, Izdatel'stvo Tsentrosoyuza, 1959. 309 pp.

COST OF PRODUCTION

32. Akademiya nauk SSSR, Institut ekonomiki. *Rezervy snizheniya sebestoimosti produktssii (Reserves for the Lowering of the Cost of Production of Output)*. Edited by K. N. Plotnikov et al. Moscow, Ekonomizdat, 1962. 335 pp.
33. Bunimovich, V. A. *Sebestoimost' promyshlennoy produktssii i tekhnicheskiiy progress (The Cost of Industrial Production and Technical Progress)*. Moscow, Gospolitizdat, 1962. 296 pp.
34. Chertkova, A. A. *Sebestoimost' produktssii i puti yeye snizheniya v mashinostroyenii (Na primere otrasley transportnogo mashinostroyeniya) (The Cost of Production and Means for Lowering It [By the Example of Branches of Transport Machine-Building])*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Izdatel'stvo Akademii nauk SSSR, 1961. 144 pp.
35. Livshits, R. S. *Sebestoimost' produktssii v tyazheloy promyshlennosti SSSR (The Cost of Production in U.S.S.R. Heavy Industry)*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Izdatel'stvo Akademii nauk SSSR, 1961. 202 pp.
36. Maslova, N. S. et al. *Zarabotnaya plata i sebestoimost' produktssii v promyshlennosti SSSR (Wages and the Cost of Production in U.S.S.R. Industry)*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Ekonomizdat, 1962. 270 pp.
37. Poklad, I. I. *Voprosy metodologii ucheta i kal'kulirovaniya sebestoimosti promyshlennoy produktssii (Problems in the Methodology of Recording and Calculating the Cost of Industrial Production)*. Moscow, Gosfinizdat, 1960. 228 pp.

ECONOMY—GENERAL

- *38. Akademiya nauk SSSR, Otdeleniye ekonomicheskikh, filosofskikh i pravovykh nauk. *Voprosy narodnogo khozyaystva SSSR, K 85-letiyu Akademika Stanislava Gustavovicha Strumilina (Questions of the U.S.S.R. National Economy, For the Eighty-Fifth Birthday of Academician Stanislav Gustavovich Strumilin)*. Edited by V. S. Nemchinov. Moscow, Izdatel'stvo Akademii nauk SSSR, 1962. 420 pp.
- *39. Al'ter, L. B. et al. (Eds.). *Rost obshchestvennogo proizvodstva i proporsitsii narodnogo khozyaystva SSSR (Growth of Socialized Production and Proportions of the U.S.S.R. National Economy)*. Moscow, Sotsekgiz, 1962. 456 pp.
- *40. Ministerstvo vysshego i srednogo spetsial'nogo obrazovaniya RSFSR, Moskovskiy ekonomiko-statisticheskii institut. *Balans obshchestvennogo produkta soyuznoy respubliki (Voprosy teorii i metodiki sostavleniya) (Balance of Social Product of the Union Republic [Questions of Theory and Method of Compilation])*. Edited by M. R. Eydel'man. Moscow, Ekonomizdat, 1962. 328 pp.
41. Notkin, A. I. *Tempy i proporsitsii sotsialisticheskogo vosproizvodstva (Rates and Proportions of Socialist Reproduction)*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Ekonomizdat, 1961. 216 pp.
- *42. Plyshevskiy, B. P. and Yu. V. Yaryemenko. *Zakonomernosti dvizheniya obshchestvennogo produkta i natsional'nogo dokhoda (Patterns in the Movement of the Social Product and National Income)*. Issued by the Scientific Research Economics Institute of Gosplan U.S.S.R. Moscow, Ekonomizdat, 1963. 190 pp.
- *43. Sobol', V. A. *Ocherki po voprosam balansa narodnogo khozyaystva (Essays on Problems of the Balance of the National Economy)*. Moscow, Gosstatizdat, 1960. 228 pp.
44. Strumilin, S. G. (Ed.). *Ekonomicheskaya zhizn' SSSR, Khronika sobytiy i faktov 1917—1959 (Economic Life of the U.S.S.R., A Chronology of Events and Facts, 1917—1959)*. Moscow, "Sovetskaya entsiklopediya," 1961. 780 pp.
45. ———. *Ocherki sotsialisticheskoy ekonomiki SSSR (1929—1959 gg.) (Essays on the U.S.S.R. Socialist Economy, 1929—1959)*. Moscow, Gospolitizdat, 1959. 420 pp.
46. ———. *Problemy sotsializma i kommunizma v SSSR (Problems of Socialism and Communism in the U.S.S.R.)*. Moscow, Ekonomizdat, 1961. 416 pp.

GEOGRAPHY, URBANIZATION, LOCATION OF INDUSTRY

47. Akademiya nauk SSSR, Institut ekonomiki. *Osobennosti i faktory razmeshcheniya otasley narodnogo khozyaystva SSSR (Characteristics and Factors of the Location of Branches of the National Economy of the U.S.S.R.)*. Edited by Ya. G. Feygin et al. Moscow, Izdatel'stvo Akademii nauk SSSR, 1960. 696 pp.
48. ———, ———. *Problemy razmeshcheniya proizvoditel'nykh sil v period razvernutoy stroitel'stva kommunizma (Problems in the Location of Productive Forces in the Period of Full-Scale Construction of Communism)*. Edited by Ya. G. Feygin et al. Moscow, Gosplanizdat, 1960. 336 pp.
49. Akademiya stroitel'stva i arkhitektury SSSR, Nauchno-issledovatel'skiy institut gradostroitel'stva i rayonnoy planirovki. *Planirovka i zastroyka bol'shikh gorodov (The Planning and Building of Large Cities)*. Moscow, Gosstroyizdat, 1961. 116 pp.
50. Alampiyev, P. M. and Ya. G. Feygin (Eds.). *Metodologicheskiye voprosy ekonomicheskoy geografii (Methodological Problems of Economic Geography)*. Moscow, Ekonomizdat, 1962. 280 pp.
51. Davidovich, V. G. *Rasseleniye v promyshlennykh uzлах (Inzhenerno-ekonomicheskkiye osnovy) (Settlements in Industrial Complexes [Engineering-Economic Bases])*. Moscow, Gosstroyizdat, 1960. 324 pp.
52. ——— and B. S. Khorev (Eds.). *Goroda-Sputniki, Sbornik statey (City Satellites, A Collection of Articles)*. Moscow, Geografiz, 1961. 196 pp.
53. Moskovskiy filial Geograficheskogo obshchestva Soyuza SSR. *Voprosy geografii, Sbornik pyat' desyat sed'moy, Ekonomicheskaya geografiya SSSR v perspektive (Problems of Geography, Fifty-Seventh Compilation, Economic Geography of the U.S.S.R. in the Future)*. Edited by Yu. G. Saushkin. Moscow, Geografiz, 1962. 328 pp.

54. Moskovskiy gosudarstvennyy ekonomicheskii institut. *Rasmeshcheniye otrasley narodnogo khozyaystva SSSR (Location of the Branches of the National Economy of the U.S.S.R.)*. Edited by A. D. Danilov and G. I. Mukhin. Moscow, Gosplanizdat, 1960. 334 pp.
- *55. Omarovskiy, A. G. *Razvitiye i razmeshcheniye mashinostroyeniya v SSSR (The Development and Location of Machine-Building in the U.S.S.R.)*. Moscow, Ekonomizdat, 1962. 239 pp.
56. Probst, A. Ye. *Razmeshcheniye sotsialisticheskoy promyshlennosti (Teoreticheskiye ocherki) (Location of Socialist Industry [Theoretical Essays])*. Moscow, Ekonomizdat, 1962. 340 pp.
- *57. Rozenfel'd, Sh. L. *Problemy razmeshcheniya promyshlennosti stroitel'nykh materialov SSSR (Problems in the Location of the Construction Materials Industry of the U.S.S.R.)*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Izdatel'stvo Akademii nauk SSSR, 1962. 332 pp.

INPUT-OUTPUT

58. Aganbegyan, A. G. and V. D. Belkin (Eds.). *Primeneinye matematiki i elektronnoy tekhniki v planirovani (The Application of Mathematics and Electronic Devices in Planning)*. Moscow, Ekonomizdat, 1961. 292 pp.
59. Akademiya nauk SSSR, Otdeleniye ekonomicheskikh, filosofskikh i pravovykh nauk, Sibirskoye otdeleniye. *Trudy nauchnogo soveshaniya o primenenii matematicheskikh metodov v ekonomicheskikh issledovaniyakh i planirovani (4-8 aprelya 1960 goda), Tom I, Obshchiye voprosy primeneniya matematiki v ekonomike i planirovani (Volume I, General Problems in the Application of Mathematics in Economics and Planning)*. Edited by V. S. Nemchinov. Moscow, Izdatel'stvo Akademii nauk SSSR, 1961. 296 pp.
60. ———, Tom II, *Matematicheskii analiz rasshirenno go vosproizvodstva (Volume II, Mathematical Analysis of Expanded Reproduction)*. (1962). 268 pp.
61. ———, Tom III, *Mezhotraslevo y balans proizvodstva i raspredeleniya produktov v narodnom khozyaystve (Volume III, Interbranch Balance of Production and Distribution of Output in the National Economy)*. (1962). 344 pp.
62. ———, Tom IV, *Lineynoye programmirovaniye (Volume IV Linear Programming)*. (1961). 132 pp.
63. ———, Tom V, *Matematicheskiye metody v planirovani i ekspluatatsii na transporte (Volume V, Mathematical Methods in Transport Planning and Operations)*. (1961). 103 pp.
64. ———, Tom VI, *Matematicheskiye metody v tekhniko-ekonomicheskikh raschetakh (Volume VI, Mathematical Methods in Technical-Economic Calculations)*. (1961). 168 pp.
- *65. Boyarskiy, A. Ya. *Matematiko-ekonomicheskkiye ocherki (Mathematical-Economic Essays)*. Issued by the Moscow State University, Economics Faculty. Moscow, Gosstatizdat, 1962. 340 pp.
- *66. Dadayan, V. S. *Ekonomiko-matematicheskoye modelirovaniye sotsialisticheskogo vosproizvodstva (Economic-Mathematical Modelbuilding of Socialist Growth)*. Moscow, Ekonomizdat, 1963. 344 pp.
67. ——— and V. V. Kossov. *Balans ekonomicheskogo rayona kak sredstvo planovykh raschetov (The Balance of an Economic Region as a Basis for Planning Calculations)*. Issued by the Academy of Sciences U.S.S.R., Division of Economic, Philosophical, and Legal Sciences, Laboratory of Economic-Mathematical Methods. Moscow, Izdatel'stvo Akademii nauk SSSR, 1962. 216 pp.
- *68. Grebtsov, G. I. et al. *Osnovy razrabotki mezhotraslevogo balansa (Bases for Elaborating an Interbranch Balance)*. Moscow, Ekonomizdat, 1962. 280 pp.
69. Kantorovich, L. V. *Ekonomicheskii raschet nailushchego ispol'zovaniya resursov (Economic Calculation of the Optimum Utilization of Resources)*. Issued by the Academy of Sciences U.S.S.R., Division of Economics, Philosophy, and Law and the Siberian Division of the Academy of Sciences U.S.S.R. Moscow, Izdatel'stvo Akademii nauk SSSR, 1959. 344 pp.
- *70. Liberman, V. B. *Mekhanizatsiya proizvodstvennogo planirovaniya (Mechanization of Production Planning)*. Moscow, Ekonomizdat, 1963. 168 pp.

- *71. Nemchinov, V. S. *Ekonomiko-matematicheskiye metody i modeli (Economic-Mathematical Methods and Models)*. Moscow, Sotsekgiz, 1962. 411 pp.

164. ———, Sibirskoye otdeleniye. *Razvitiye proizvoditel'nykh sil Vostochnoy Sibiri, Chernaya metallurgiya (Development of the Productive Forces of Eastern Siberia, Ferrous Metallurgy)*. Edited by I. P. Bardin et al. Moscow, Izdatel'stvo Akademii nauk SSSR, 1960. 276 pp.
- Other publications in this series have the same title except for the substitution of the following after "Sibiri":
165. ———, ———, ———, *Energetika (Energetics)*. 416 pp.
166. ———, ———, ———, *Khimicheskaya promyshlennost' (Chemical Industry)*. 204 pp.
167. ———, ———, ———, *Lesnoye khozyaystvo i lesnaya promyshlennost' (Forestry and Timber Industry)*. 240 pp.
168. ———, ———, ———, *Mashinostroyeniye (Machine-Building)*. (1959). 116 pp.
169. ———, ———, ———, *Obshchiye voprosy razvitiya proizvoditel'nykh sil (General Questions in the Development of Productive Forces)*. 172 pp.
170. ———, ———, ———, *Rayonnyye i mezhrayonnyye kompleksnyye problemy (Regional and Interregional Complex Problems)*. 192 pp.
171. ———, ———, ———, *Stroitel'naya industriya i promyshlennost' stroitel'nykh materialov (Construction Industry and Construction Materials Industry)*. 279 pp.

172. ———. ———, *Toplivo i toplivnaya promyshlennost' (Fuel and Fuel Industry)*. 319 pp. (and others in this series).
173. ———, *Sovet po izucheniyu proizvoditel'nykh sil pri Gosekonomsoвете Soveta ministrov SSSR. Problemy razvitiya proizvoditel'nykh sil Magadanskoy oblasti (Problems in the Development of the Productive Forces of Magadanskaya Oblast)*. Edited by S. V. Slavin. Moscow, Izdatel'stvo Akademii nauk SSSR, 1961. 304 pp.
- *174. Alampiyev, P. M. *Ekonomicheskoye rayonirovaniye SSSR (Economic Regionalization of the U.S.S.R.)*. Second edition. Moscow, Ekonomizdat, 1963. 248 pp.
- *175. Margolin, A. B. *Problemy narodnogo khozyaystva Dal'nego Vostoka (Problems in the National Economy of the Far East)*. Issued by the Academy of Sciences U.S.S.R. and Gosplan U.S.S.R., Council for the Study of Productive Forces. Moscow, Izdatel'stvo Akademii nauk SSSR, 1963. 256 pp.
- *176. Rozenfel'd, Sh. L. *Opredeleniye urovney razvitiya promyshlennosti v rayonakh (Determining the Level of Industrial Development in Regions)*. Moscow, Ekonomizdat, 1963. 140 pp.

STATISTICS, ACCOUNTING, MECHANIZED DATA PROCESSING

177. Goloshchapov, V. A. (Compiler). *Spravochnik po bukhgalterskomu uchetu (Handbook on Accounting)*. Third revised edition. Moscow, Gosfinizdat, 1961. 533 pp.
178. Kuparadze, G. Z. *Spravochnik ekonomista (Promyshlennost' i sel'skoye khozyaystvo) (Economist's Handbook [Industry and Construction])*. Tbilisi, Izdatel'stvo GSKhI, 1960. 592 pp.
179. Moskovskiy ekonomiko-statisticheskiy institut. *Voprosy statistiki i ucheta (Sbornik statey po mekhanizatsii ucheta) (Questions of Statistics and Recordkeeping [A Collection of Articles on Recordkeeping Mechanization])*. Issue 2. Moscow, Gosstatizdat, 1959. 352 pp.
180. Petrov, A. I. (Ed.). *Kurs ekonomicheskoy statistiki (Course in Economic Statistics)*. Third revised and enlarged edition. Moscow, Gosstatizdat, 1961. 508 pp.
181. Ryabushkin, T. V. *Problemy ekonomicheskoy statistiki, Analiz struktury narodnogo khozyaystva i vzaimosvyazi yego elementov (Problems of Economic Statistics, Analysis of the Structure of the National Economy and the Interrelation of its Elements)*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Izdatel'stvo Akademii nauk SSSR, 1959. 376 pp.
182. Sazonov, S. V. and B. B. Veyze (Eds.). *Voprosy mekhanizatsii inzhenernogo i upravlencheskogo truda. Materialy Vsesoyuznogo soveshchaniya po voprosam mekhanizatsii truda inzhenerno-tekhnicheskikh rabotnikov i rabotnikov administrativno-upravlencheskogo apparata, sostoyavshegosya v Moskve 20-25 iyunya 1960 g. (Problems in the Mechanization of Engineering and Administrative Work. Materials of the All-Union Conference on Problems on the Mechanization of Work of Engineering-Technical Personnel and Personnel of the Administrative-Management Apparatus, Convened in Moscow, June 20-25, 1960)*. Moscow, Gosstatizdat, 1961. 576 pp.
183. *Vsesoyuznoye soveshchaniye statistikov, 4-8 iyunya 1957 g., Stenograficheskiy otchet (All-Union Conference of Statisticians, June 4-8, 1957, Stenographic Report)*. Moscow, Gosstatizdat, 1959. 688 pp.
184. Yezhov, A. I. (Ed.). *Istoriya sovetской gosudarstvennoy statistiki, Sbornik statey (History of Soviet State Statistics, A Collection of Articles)*. Moscow, Gosstatizdat, 1960. 440 pp.

TRADE UNIONS

185. Dvornikov, I. S. et al. *Professional'nyye soyuzy SSSR (Kratkiy spravochnik), No. 13 (Trade Unions of the U.S.S.R. [A Short Handbook]), no. 13*. Moscow, Profizdat, 1961. 128 pp.
186. ——— (Compilers). *Spravochnik profsoyuznogo rabotnika (Handbook for Trade Union Personnel)*. Moscow, Profizdat, 1962. 528 pp.

187. Moskovskaya vysshaya zaochnaya shkola profdvizheniya. *Finansy professional'nykh soyuzov SSSR (Organizatsiya i planirovaniye) (Finances of Trade Unions of the U.S.S.R. [Organization and Planning])*. By V. P. Borisov et al. Moscow, Profizdat, 1961. 200 pp.
- *188. ———. *Istoriya profdvizheniya v SSSR (History of the Trade Union Movement in the U.S.S.R.)*. Second revised edition. Moscow, Profizdat, 1961. 527 pp.

WAGES

189. Aganbegyan, A. G. and V. F. Mayer. *Zarabotnaya plata v SSSR (Nekotoryye voprosy teorii i praktiki) (Wages in the U.S.S.R. [Several Questions of Theory and Practice])*. Moscow, Gosplanizdat, 1959. 240 pp.
- *190. Karpukhin, D. N. *Sootnosheniye rosta proizvoditel'nosti truda i zarabotnoy platy (Na materialakh promyshlennosti SSSR) (Relationship of the Growth of Labor Productivity and Wages [From Materials on U.S.S.R. Industry])*. Moscow, Ekonomizdat, 1963. 176 pp.
- *191. Mayer, V. F. *Zarabotnaya plata v period perekhoda k kommunizmu (Wages in the Period of Transition to Communism)*. Moscow, Ekonomizdat, 1963. 303 pp.
192. Nauchno-issledovatel'skiy institut truda Gosudarstvennogo komiteta Soveta ministrov SSSR po voprosam truda i zarabotnoy platy. *Sovershenstvovaniye organizatsii zarabotnoy platy (Improvement of the Organization of Wages)*. Edited by S. I. Shkurko. Moscow, Ekonomizdat, 1961. 176 pp.
193. ———. *Voprosy truda, tom II, Primneniye sdel'noy i povremennoy oplaty truda v promyshlennosti (Problems of Labor, Volume II, The Application of Piece-Rate and Time-Rate Payment for Labor in Industry)*. Edited by Ye. A. Kapustin et al. Moscow, n.p., 1959. 199 pp.
194. ———. *Zarabotnaya plata v promyshlennosti SSSR i yeye sovershenstvovaniye (Wages in U.S.S.R. Industry and Their Improvement)*. Edited by Ye. I. Kapustin. Moscow, Sotsekgiz, 1961. 204 pp.
195. Okhapkin, K. A. *Ekonomicheskaya effektivnost' denezhnoy oplaty truda v kolkhozakh (Economic Effectiveness of Money Payment for Labor in Collective Farms)*. Moscow, Gosplanizdat, 1960. 219 pp.
196. Orlovskiy, I. A. and G. P. Sergeyeva. *Sootnosheniye rosta proizvoditel'nosti truda i zarabotnoy platy v promyshlennosti SSSR (The Relationship of the Growth of Labor Productivity and Wages in U.S.S.R. Industry)*. Issued by the Scientific Research Institute of Labor of the State Committee of the Council of Ministers of the U.S.S.R. on Labor and Wage Problems. Moscow, Sotsekgiz, 1961. 144 pp.

BRANCH LISTING

AGRICULTURE

197. Akademiya nauk SSSR, Institut ekonomiki. *Obshchestvennyye fondy kolkhozov i raspredeleniye kolkhoznnykh dokhodov (Socialized Funds of Collective Farms and the Distribution of Collective Farm Income)*. Edited by I. D. Laptev. Moscow, Ekonomizdat, 1961. 388 pp.
198. ———, ———. *Proizvoditel'nost' truda v sotsialisticheskom sel'skom khozyaystve (Voprosy metodologii i metodiki) (Labor Productivity in Socialist Agriculture [Questions of Methodology and Methods])*. Edited by Ye. S. Karnaukhova et al. Moscow, Sel'khozgiz, 1959. 424 pp.
199. ———, ———. *Voprosy ischisleniya sebestoimosti produktsii v kolkhozakh (Problems of the Calculation of Cost of Production in Collective Farms)*. Edited by V. G. Venzher and Ye. S. Karnaukhova. Moscow, Gosplanizdat, 1959. 164 pp.
- *200. ———, Institut istorii, Nauchnyy sovet po probleme "Istoriya sotsialisticheskogo i kommunisticheskogo stroitel'stva v SSSR." *Istoriya sovet'skogo krest'yanstva i kolkhoznogo stroitel'stva v SSSR, Materialy nauchnoy sessii, sostoyavsheysya 18-21 aprelya 1961 g. v Moskve (History of the Soviet Peasantry and Collective Farm Construction in the U.S.S.R., Materials of a Scientific Session Held April 18-21, 1961 in Moscow)*. Edited by M. P. Kim et al. Moscow, Izdatel'stvo Akademii nauk SSSR, 1963. 448 pp.
201. ———, and Vsesoyuznyy nauchno-issledovatel'skiy institut ekonomiki sel'skogo khozyaystva. *Rezervy i puti povysheniya proizvoditel'nosti truda v sel'skom khozyaystve SSSR (Reserves and Meas for Raising Labor Productivity in U.S.S.R. Agriculture)*. Edited by Ye. S. Karnaukhova et al. Moscow, Ekonomizdat, 1962. 491 pp.

- *202. Akademiya obshchestvennykh nauk pri TsK KPSS, Kafedra politicheskoy ekonomii. *Ispol'zovaniye material'nykh i trudovykh resursov kolkhozov i povysheniye blagosostoyaniya kolkhoznikov na sovremennom etape (Use of Collective Farm Material and Labor Resources and Raising the Well-Being of Collective Farmers at the Present Stage)*. Edited by M. F. Makarova et al. Moscow, Izdatel'stvo VPSH i AON pri TsK KPSS, 1962. 464 pp.
203. ———, ———. *Sotsialisticheskoye sel'skoye khozyaystvo na sovremennom etape i voprosy agrarnoy teorii (Socialist Agriculture's Present Stage and Questions of Agrarian Theory)*. Edited by M. F. Kovaleva et al. Moscow, Izdatel'stvo VPSH i AON pri TsK KPSS, 1960. 479 pp.
204. Arutyunyan, Yu. V. *Mekhanizatory sel'skogo khozyaystva SSSR v 1929-1957 gg. (Formirovaniye kadrov massovykh kvalifikatsiy) (Mechanized Personnel of U.S.S.R. Agriculture in 1929-1957 [Formation of Cadres with Mass Qualifications])*. Issued by the Academy of Sciences U.S.S.R., Institute of History. Moscow, Izdatel'stvo Akademii nauk SSSR, 1960. 342 pp.
- *205. Badir'yan, G. G. (Ed.). *Ekonomika, organizatsiya i planirovaniye sel'skokhozyaystvennogo proizvodstva (Economics, Organization, and Planning of Agricultural Production)*. Moscow, Ekonomizdat, 1963. 608 pp.
206. Borisov, Yu. S. *Podgotovka proizvodstvennykh kadrov sel'skogo khozyaystva SSSR v rekonstruktsionnyy period (The Preparation of Production Cadres of the U.S.S.R. Agriculture for the Reconstruction Period)*. Issued by the Academy of Sciences U.S.S.R., Institute of History. Moscow, Izdatel'stvo Akademii nauk SSSR, 1960. 288 pp.
207. Braginskii, B. I. *Proizvoditel'nost' truda v sel'skom khozyaystve, Metodika ucheta i planirovaniya (Labor Productivity in Agriculture, Methods of Recording and Planning)*. Moscow, Sel'khozizdat, 1962. 432 pp.
- *208. Danilov, V. P. (Ed.). *Ocherki istorii kollektivizatsii sel'skogo khozyaystva v soyuznykh respublikakh (Essays on the History of Agricultural Collectivization in the Union Republics)*. Moscow, Gospolitizdat, 1963. 560 pp.
209. Dumnov, D. I. *O proizvoditel'nosti truda v sel'skom khozyaystve (statisticheskiye metody izucheniya i analiza) (On Labor Productivity in Agriculture [Statistical Methods of Study and Analysis])*. Moscow, Gosstatizdat, 1960. 144 pp.
210. Gozulov, A. I. *Statistika sel'skogo khozyaystva (Statistics of Agriculture)*. Moscow, Gosstatizdat, 1959. 460 pp.
211. Ignatov, L. P. and K. S. Starovoytov. *Nekotoryye voprosy planirovaniya sel'skogo khozyaystva (Some Problems of Agricultural Planning)*. Moscow, Ekonomizdat, 1961. 208 pp.
212. Ivanchenko, A. A. and P. S. Minakov. *Voprosy metodiki planirovaniya proizvoditel'nosti truda v sel'skom khozyaystve (Problems in the Method of Planning Labor Productivity in Agriculture)*. Moscow, Gosplanizdat, 1960. 144 pp.
- *213. Karnaukhova, Ye. S. et al. (Eds.). *Metody izmereniya, analiza i planirovaniya proizvoditel'nosti truda v kolkhozakh i sovkhozakh (Methods of Measuring, Analyzing and Planning Labor Productivity in Collective and State Farms)*. Moscow, Ekonomizdat, 1963. 212 pp.
214. Kassirov, L. N. *Oborotnyye sredstva kolkhozov (Working Capital of Collective Farms)*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Sel'khozizdat, 1962. 112 pp.
215. Knyazevskiy, V. S. *Statistika ispol'zovaniya trudovykh resursov i proizvoditel'nosti truda v sel'skom khozyaystve (Statistics on the Utilization of Labor Resources and Labor Productivity in Agriculture)*. Moscow, Gosstatizdat, 1960. 96 pp.
- *216. Nauchno-issledovatel'skiy finansovyy institut. *Denezhnyye dokhody kolkhozov i differentsial'naya renta (Monetary Receipts of Collective Farms and Differential Rent)*. Edited by G. P. Kosyachenko. Moscow, Gosfinizdat, 1963. 224 pp.
- *217. Obolenskiy, K. P. *Opredeleniye ekonomicheskoy effektivnosti sel'skokhozyaystvennogo proizvodstva (Voprosy teorii i praktiki) (Determination of the Economic Effectiveness of Agricultural Production [Questions of Theory and Practice])*. Moscow, Sotsekgiz, 1963. 308 pp.

- *218. Ostroverkh, N. F. *Puti povysheniya proizvoditel'nosti sel'skokhozyaystvennogo truda (na materialakh kolkhozov Ukrainskoy SSR)* (Means for Raising the Productivity of Agricultural Labor [From Materials of the Ukrainian S.S.R. Collective Farms]). Issued by the Academy of Sciences of the Ukrainian S.S.R., Council for the Study of Productive Forces of the Ukrainian S.S.R. Kiev, Izdatel'stvo Akademii nauk Ukrainskoy SSR, 1963. 278 pp.
219. Pashkaver, I. S. *Balans trudovykh resursov kolkhozov (voprosy metodologii, metodiki i analiza)* (Balance of Labor Resources of Collective Farms [Problems of Methodology, Systems and Analysis]). Issued by the Ukrainian Scientific Research Institute of Economics and Agricultural Organization of the Ukrainian Academy of Agricultural Sciences. Kiev, Izdatel'stvo Ukrainskoy akademii sel'skokhozyaystvennykh nauk, 1961. 364 pp.
220. Rozhin, V. P. *Nekotoryye voprosy pod'yema ekonomiki slabykh kolkhozov* (Some Problems in Raising the Economy of Weak Collective Farms). Moscow, Ekonomizdat, 1961. 157 pp.
221. Semin, S. I. *Nedelimyye fondy i puti sblizheniya kolkhozno-kooperativnoy sobstvennosti s obshchenarodnoy* (Indivisible Funds and Means for Drawing Collective Farm-Cooperative Property Closer to Public Property). Moscow, Ekonomizdat, 1961. 183 pp.
- *222. Studenkova, N. M. *Sebestoimost' produktsii i rentabel'nost' kolkhoznoy proizvodstva* (Cost of Production and Profitability of Collective Farm Production). Moscow, Ekonomizdat, 1962. 84 pp.
- *223. Vasilenko, M. P. *Puti preodoleniya sezonnosti truda v kolkhozakh* (Means for Overcoming Seasonality of Work in Collective Farms). Moscow, Izdatel'stvo "Sovetskaya Rossiya," 1963. 200 pp.
224. Valovoy, D. V. *Razvitiye mezhkolkhoznykh proizvodstvennykh svyazey* (Development of Intercollective Farm Production Relations). Moscow, Sel'khozizdat, 1962. 520 pp.
225. Venzher, V. G. *Voprosy ispol'zovaniya zakona stoimosti v kolkhoznom proizvodstve* (Cost of Production and Profitability of Collective Farm Production). Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Gosplanizdat, 1960. 320 pp.
226. Vsesoyuznyy nauchno-issledovatel'skiy institut ekonomiki sel'skogo khozyaystva. *Povysheniye urovnya razvitiya kolkhoznoy proizvodstva* (Increasing the Level of Development of Collective Farm Production). By G. G. Kotov et al. Moscow, Ekonomizdat, 1961. 238 pp.
227. Zuzik, D. T. *Ekonomika vodnogo khozyaystva* (Economics of Water Management). Moscow, Sel'khozgiz, 1959. 416 pp.

INDUSTRY—GENERAL

228. Akademiya nauk SSSR, Institut ekonomiki. *Proizvoditel'nost' truda i sebestoimost' produktsii v promyshlennosti* (Labor Productivity and Cost of Production in Industry). Edited by G. N. Yefstav'yev et al. Moscow, Izdatel'stvo Akademii nauk SSSR, 1961. 334 pp.
229. Akademiya obshchestvennykh nauk pri TsK KPSS, Kafedra politicheskoy ekonomii. *Razvitiye sotsialisticheskoy promyshlennosti na sovremennom etape (o khozyaystvennom rukovodstve)* (The Present Stage of Development of Socialist Industry [On Economic Management]). Edited by A. G. Kilikov and V. G. Lebedev. Moscow, Izdatel'stvo VPSH i AON pri TsK KPSS, 1962. 259 pp.
230. Bishayev, M. A. and M. M. Fedorovich. *Organizatsiya upravleniya promyshlennym proizvodstvom* (Organization of the Administration of Industrial Production). Moscow, Gosplanizdat, 1961. 224 pp.
- *231. Brovkovich, D. A. et al. *Planirovaniye promyshlennosti v ekonomicheskom rayone (Opyt Rostovskogo sovnarkhoza)* (Planning of Industry in an Economic Region [Experience of the Rostov Council of National Economy]). Moscow, Ekonomizdat, 1962. 188 pp.
232. Ganshtak, V. I. and I. A. Rozenberg. *Puti sovershenstvovaniya upravleniya promyshlennym predpriyatiyem* (Means for Improvement of the Administration of an Industrial Establishment). Moscow, Gospolitizdat, 1962. 192 pp.

233. Kheyman, S. A. *Ekonomicheskiye problemy organizatsii promyshlennogo proizvodstva (Economic Problems in the Organization of Industrial Production)*. Moscow, Gospolitizdat, 1961. 336 pp.
234. ———. *Organizatsiya proizvodstva i proizvoditel'nost' truda v promyshlennosti SSSR (Na primere mashinostroyeniya i chernoy metallurgii) (Organization of Production and Labor Productivity in U.S.S.R. Industry [By the Example of Machine-Building and Ferrous Metallurgy])*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Gosplanizdat, 1961. 228 pp.
- *235. Khromov, P. A. *Nekotoryye zakonomernosti razvitiya promyshlennosti SSSR (formy promyshlennosti, tekhnicheskii progress, tempy razvitiya) (Some Patterns in the Development of U.S.S.R. Industry [Forms of Industry, Technical Progress, Rates of Growth])*. Issued by the Academy of Sciences U.S.S.R., Institute of Economics. Moscow, Izdatel'stvo Akademii nauk SSSR, 1963. 324 pp.
- *236. Laptev, V. V. *Pravovoye polozheniye gosudarstvennykh promyshlennykh predpriyatiy v SSSR (Legal Position of State Industrial Establishments in the U.S.S.R.)*. Issued by the Academy of Sciences U.S.S.R., Institute of State and Law. Moscow, Izdatel'stvo Akademii nauk SSSR, 1963. 288 pp.
237. Levin, I. M. *Planirovaniye i analiz truda i zarabotnoy platy na promyshlennom predpriyatii (Planning and Analysis of Labor and Wages in an Industrial Establishment)*. Moscow, Gosplanizdat, 1961. 232 pp.

Part B

SELECTED SOVIET BIBLIOGRAPHY ON INPUT-OUTPUT

This bibliography lists Soviet sources directly related to input-output analysis and techniques in the Soviet Union. All Soviet and Western (English language) sources known to the compiler are shown; only a few selected papers and books from other East European Socialist countries are listed. It is very difficult to delineate the boundaries of input-output analysis, as in the context of Soviet economics it merges with national income statistics, material balances, the theory of reproduction on one hand and linear programming on the other. In order to present this bibliography in manageable dimensions, the sources related to these areas are omitted unless they refer directly to input-output analysis.

The bibliography covers books, volumes of collected papers, journal papers, as well as newspaper articles, book reviews, conference reports, and the like. The few Western books on input-output translated and published in the U.S.S.R. are also included.

Papers included in volumes completely devoted to input-output are not shown separately. The listings are divided into books, journal papers, and other sources, and are arranged alphabetically by author within each of these three divisions. In each non-English reference a transliterated Soviet title is followed by an English translation. The Soviet term "mezhotraslevoi" is translated as "intersectoral" rather than as "input-output" to be as close to the Soviet content of the term as possible.

¹ The paper contains a table (p. 12) with an obvious typographical error in the entry showing industrial purchases of transportation services. The error was never corrected in an *errata*. However, the author, M. Eidel'man, in a personal letter to the compiler of the bibliography (dated Nov. 1, 1962, Moscow) indicated that the correct value should be 1,083.2.

APPENDIX 1

ECONOMIC INTERRELATIONS IN THE SOVIET UNION (Summary and Reconstruction of the 1959 Soviet Interindustry Table)

APPENDIX 1

ECONOMIC INTERRELATIONS IN THE SOVIET UNION

INTRODUCTION ¹

This study is focused on the summary, analysis, and reconstruction of the first operational large-scale Soviet input-output flow table which was completed in the U.S.S.R. in 1961 but never fully published. The importance of the intersectoral balance, to use the Soviet term, cannot be overemphasized. It is too early to say whether the new techniques which are being gradually adopted in the U.S.S.R. would improve the efficiency of economic planning and affect Soviet economics performance. But for a Western student of Soviet economics an interindustry model of the Soviet economy, all its shortcomings notwithstanding, offers a wealth of data opening a completely new dimension in our studies. The flow and coefficient tables give us a bird's-eye view of the technology and the intricacies of interindustry relations as well as the production and distribution pattern of the Soviet economy. In addition to the model itself this study offers two sets of Soviet economic data which have always been kept secret in the U.S.S.R.; i.e., a list of values of gross outputs and employment in some 70 sectors of the Soviet economy. Parenthetically it may be noted that although the tables refer to 1959, the model is of more than historical interest as, at least in the eyes of Soviet economists, the basic interindustry relations revealed in the model remain relevant. Thus, out of 4,260 input coefficients shown in the 1959 intersectoral balance only 500 were adjusted when the first planning balance was being prepared for 1962.² The end product of the study is a fully reconstructed 1959 balance showing the grid of interindustry relations as well as consumption, value added, and employment of 38 aggregated sectors of the Soviet economy. A table of flow coefficients and the $(I-A)^{-1}$ table of inverse coefficients have also been prepared. The gross output and employment data are also given in a disaggregated form.³

¹ This paper offers a brief summary of a study "Soviet 1959 Interindustry Model: Reconstruction and Analysis" prepared under the auspices of the Research Analysis Corporation, McLean, Va., by Dr. Vladimir G. Trembl, associate professor of economics, Franklin and Marshall College. The complete study will be published later this year. The author gratefully acknowledges the assistance of Dr. John P. Hardt and Dr. Stanley Cohn and, on earlier stages of the work, of Marvin Hoffenberg and Prof. James M. Blackman. All calculations were made at RAC's Computer Laboratory. References are made only to the most important sources. A complete bibliography of input-output analysis in the U.S.S.R. is given separately in this volume.

HISTORICAL BACKGROUND

For some time now Western students of Soviet economics have been aware of a gradual reorientation of the Soviet economic science toward more rigorous analytical methods and, broadly speaking, toward a more pragmatic approach in economic analysis. The extensive exploration of various mathematical techniques, such as linear programming or input-output analysis, is but one manifestation of this trend.

But in the light of the current enthusiasm for applying mathematical tools to economic analysis, it is easy to forget that only a few years ago the mathematical approach to economic problems was frowned upon.⁴ Soviet partisans of the adoption of input-output analysis were especially severely handicapped. In addition to the general antimathematical bias of the Soviet economics profession several specific factors made input-output unpalatable to Soviet party controllers and to the majority of economists. In the first place input-output techniques were developed and perfected in the West and were therefore summarily dismissed and discredited in the Soviet Union on numerous occasions in the past. A number of other ideological obstacles, rather minor in the eyes of a Western student, had to be overcome. The n -product input-output models were considered to be in conflict with the two-product Marxian schemes of development. Leontief's input-output models are, of course, directly related to the Walrasian general equilibrium theory and this, again, poses a problem in the context of Soviet economics in which general equilibrium is associated with planning methods advocated in the late twenties by Bazarov and Groman and subsequently strongly condemned by Stalin.⁵ The proposed adoption of input-output techniques also raised some policy questions. All Soviet advocates of input-output strongly suggest that planning should start with national income, or in the framework of an input-output model with final demand vectors. This recommendation is contrary to the time-honored Soviet practice of planning with gross product and treating national income as a residual.⁶

Some of these ideological issues have been partially resolved and some simply dropped, and the partisans of input-output techniques appear to have gained the upper hand. At the same time it must be noted that, all the impressive efforts of constructing numerous operational models notwithstanding, input-output techniques have not yet been formally incorporated in Soviet planning. It is impossible

⁴ For a discussion of this trend see Wassily Leontief, "The Decline and Rise of Soviet Economic Science," *Foreign Affairs*, January 1960, pp. 261-272; Alfred Zauberman, "New Winds in Soviet Planning," *Soviet Studies*, XII, No. 1, July 1960, pp. 1-13; and "The Present State of Soviet Planometrics," *Soviet Studies*, XIV, No. 1, July 1962, pp. 62-74.

⁵ Reluctance of Soviet economist to use the term "equilibrium" is amazing. A prominent Soviet statistician, A. Volodarskii, recently published an article discussing intersectoral balance methods under the title: "Tempy, proporsii, harmoniia" (*Ekonomicheskaja gazeta*, No. 9, Oct. 2, 1961, pp. 5-6). The word "harmony" in this context in Russian is highly inappropriate, almost ridiculous, and its use can be explained only by the author's refusal to use "ravnovesie" (equilibrium).

to tell from the scarce data available the exact role played by the 1962 and 1963 planning balances, but it is clear that they have not replaced the traditional methods of planning.⁷

First Soviet input-output studies were started in the midfifties, but all of this experimental work was and still is shrouded in complete secrecy. We do have some evidence that several highly aggregated pilot tables were prepared; some of these utilized Soviet statistical data but United States and Japanese input-output analog data was also used.⁸

The veil of secrecy was partially lifted in 1961 when the completion of the first two large-scale operational ex-post intersectoral balances based on 1959 data was announced.⁹ One balance was prepared in value terms and showed 83 productive sectors; the second was in physical units and showed 157 commodities. About a year after the construction of the two balances, labor input complements were completed.¹⁰ There is also some evidence that a capital capacity vector was added to the balances later. Satisfied with the results of these ex-post studies Soviet economists moved almost immediately to the preparation of ex-ante models, and early in 1962 the first two planning intersectoral balances were completed. The balance in value terms was very similar to the 1959 ex-post balance and employed the same sector classification, but the coverage of the balance in physical units was substantially expanded with a total of 346 commodities being shown.¹¹

In contrast to the ex-post 1959 balances, which were given wide publicity, only one paper discussing the method of construction of the planning balance in value terms appeared. Almost nothing has been reported on three planning balances which were completed in 1963 for that year: two of these were in physical units with, respectively, 435 and 372 commodities, while nothing is known of the balance in value terms.¹² There is also some evidence that a long-range model is being prepared for 1970.¹³

The work on these ex-post and ex-ante models of the entire economy is centered at the Economic Research Institute of Gosplan. At the same time, extensive studies of regional and interregional intersectoral models were pursued at the Laboratory of Mathematical Applications in Economics of the Academy of Sciences of the U.S.S.R. Between 1958 and the end of 1963 a total of 15 regional flow models, both of the ex-post and ex-ante variety, were prepared covering 8 large economic regions, such as the Belorussian, Estonian, and Latvian Republics.¹⁴

The exploration and gradual adoption of input-output techniques in the U.S.S.R. was paralleled in other countries of the Soviet bloc. One could even find sufficient evidence to suggest that Poles and Hungarians, less dogmatic and better acquainted with Western

In summary we may suggest that while admittedly the theoretical frame and the statistical paraphernalia of presently used Soviet intersectoral models is not too sophisticated and has hardly advanced beyond the level of Western studies of the early forties, the Soviet partisans of input-output techniques have accomplished surprisingly much. This should be viewed against the background of ideological obstacles and resistance to change from many quarters. Nor should we lightly dismiss the technical difficulties, such as the lack of trained personnel and the limitations of Soviet computer facilities.

SUMMARY OF THE LAYOUT AND STRUCTURAL FEATURES OF THE BALANCE

The 1959 Soviet intersectoral balance in rubles can be described as a static, ex-post, Leontief-type open input-output flow table. The flows were measured in current 1959 purchaser's prices, that is, prices which include trade and transportation margins as well as the turnover tax whenever applicable.¹⁵

The table is divided into four subtables or quadrants. The first or the northwest quadrant is a square 83 x 83 table showing sales of products (horizontally) and purchases of inputs of 83 sectors. Following the Marx-inspired Soviet definition of national income and product, the table shows only sectors producing material goods or sectors directly related to production of material goods, e.g., freight transportation, communications serving material production, repair of machinery, and all trade and distribution services. Out of the total of 83 sectors, 73 are industrial sectors.¹⁶

All other services such as health, education, defense, and administrative services, passenger transportation, communications serving population, and the like are shown in quadrant II¹⁷ as final demand claimants along with consumption, investment, and exports. It may be noted that the entire output of construction and capital repair is shown in the second quadrant under investment (the construction row in the first quadrant shows only zeros). The entire output of trade and distribution services, freight transportation, and communications serving production is allocated within the first quadrant, and therefore their contribution to final demand is zero.

Thus in terms of the Soviet national income and product theory the two upper quadrants of the balance can be interpreted as showing the distribution of gross output (gross social product) with the distribution of the net product (national income) to consumption, gross investment, and exports shown in the second quadrant. The third quadrant shows depreciation, various types of labor income (wages, salaries, income-in-kind, etc.), state income such as turnover and other taxes, profits, social security contributions, and finally imports. It will be observed then that the two left-hand quadrants (I and II) conveniently show the Marxian breakdown of the value of the gross output into c (material inputs or elements of quadrant I), v (labor income), and m (surplus value or product).

Construction of the 1959 balance enabled Soviet economists to estimate for the first time the relative weights of consumer and producer goods as well as the distribution of the c , v , and m value elements in the gross social product and its subdivisions¹⁸ as shown in table 2.

¹⁵ For the nonspecialist discussion of input-output analysis, see H. Chenery and P. Clark, *Interindustry Economics*, New York, Wiley, 1959.

¹⁶ See Section B, table 1, for an 83-sector detail classification.

¹⁷ The Soviet practice of numbering quadrants is used in this study.

¹⁸ Soviet statisticians and planners do calculate and operate with producer goods (group A) and consumer goods (group B) subdivisions of the industrial gross product. Estimates of these two subdivisions (groups I and II) in the entire product although continuously discussed in abstracts were never actually made. Estimates of relative weights of the value elements were also never attempted prior to the publication of the 1959 balance.

TABLE 2.—*Distribution of value elements in the gross social product, 1959*

	Total gross social product	Producer goods	Consumer goods
Material cost (c).....	50.8	52.1	49.0
Labor income (v).....	26.1	29.5	21.3
Surplus product (m).....	23.1	18.4	29.7
Total.....	100.0	100.0	100.0

Source, table 2: M. R. Eidel'man, *Vestnik statistiki*, No. 7, 1961, p. 22.

One departure from the customary Soviet practice may be noted: Soviet statisticians calculate gross social product by origin in terms of producer's prices, and the use of purchaser's prices in the 1959 balance led to double counting of trade and transportation costs and consequently to distortions in the GSP distribution.

The fourth quadrant shows how the national product recorded in the third quadrant is redistributed through the state budget. Information on the fourth quadrant is rather scarce, and several Soviet authors expressed dissatisfaction with its layout. It is interesting to note that in the 1962 planning balance Soviet framers followed the practice of Polish and Hungarian models and left the fourth quadrant blank.¹⁹

Sector classification used in the 1959 balance is the official sector classification employed by the Central Statistical Administration of the U.S.S.R. However, in the framework of the balance the sectors are defined as producing homogeneous output. In the process of constructing the flow table, products were removed from sectors for which they were secondary and added to sectors for which they were primary. The cost structure of sectors for which these adjustments were made was then correspondingly corrected.²⁰ We do not know the overall magnitude of these adjustments, but apparently it was substantial. Thus one Soviet source indicated that "nonsectoral" output comprised as much as 35.1 percent of output of the sector producing hoisting and transporting equipment, 34.1 percent of output of forging and pressing equipment, or 27.8 percent of output of transportation machinery. The share of nonsectoral output was especially large in machine building; in such sectors as coal mining it was only 0.4 percent.²¹

The data for the construction of the balance was obtained in the following way. A stratified-random sampling survey covering 20 percent of all enterprises was employed to get the cost data for the 73 industrial sectors and construction. Cost data for other sectors as well as for the final demand and value added quadrants were taken from the records of the Central Statistical Administration.²²

No unallocated entries were shown and the entire balance was made to agree with official national income and product accounts prepared by the Central Statistical Administration. It may be noted, however, that because of the use of purchaser's instead of producer's prices, the use of artificially created "pure" sectors and other statisti-

cal discrepancies the flow and coefficient data of the balance is not directly translatable or comparable with the data used in statistical reports or planning.

The coverage appears to be fairly comprehensive—the full unabridged 83-sector first quadrant matrix has 4,260 nonzero entries, or 62 percent of the total.²³ At the same time it may be noted that the degree of concentration of flows is high; a Soviet study revealed that some 500 entries in the technology matrix accounted for 95 percent of all flows shown in the matrix.²⁴

Construction of the two 1959 balances was completed early in 1961. In contrast to the almost complete secrecy which shrouded the earlier Soviet input-output studies, the 1959 balances and especially the balance in value terms were given a high degree of publicity and a substantial amount of intersectoral data was published. The most important was the publication of a truncated 73-sector segment of the first quadrant in the 1960 Statistical Abstracts of the U.S.S.R.²⁵ Three sectors (radioelectronics, miscellaneous machine building products, and miscellaneous industrial products) were completely omitted from the published flow table. Thirteen sectors were grouped into different aggregates: thus, for instance, four metallurgy sectors were grouped into one, three trade sectors were grouped into one, transportation and communications were also combined. It is rather difficult to offer the rationale for all omissions and aggregations. Omission of radioelectronics and miscellaneous machine building product sectors, which probably produce military hardware, was apparently dictated by considerations of military secrecy. The aggregation of the bread and bakery sector with the flour and cereals sector is rather difficult to explain.

About a year after the completion of the 1959 balance its labor input complement was prepared. Labor inputs were expressed in man-years (average for the year) of total employment in each sector. The employment figures were obtained by the sampling survey referred to above and adjusted to reflect employment in "pure" sectors.²⁶ Essentially the labor complement consisted of a row of employment figures for the 83 sectors of the balance (or, of course, a row of labor input coefficients defined as employment in man-years per 1,000 rubles of gross output). However, the framers of the balance chose to multiply each row of the ruble balance by a respective labor input coefficient creating a semblance of a new "labor balance." The new balance then reads horizontally as direct labor embodied in the flow of product of the given sector and vertically as direct labor embodied in material purchases of the sector. This new table was published in a truncated format similar to the ruble balance in the 1961 Statistical Abstract of the U.S.S.R.²⁷

The appearance of the labor balance was hailed in the Soviet Union as the first step in the direction of determining the "true value" of commodities and therefore of utmost importance for price formation.²⁸ Several projects for determining the "labor value" of commodities of varying degrees of complexity and scope were reported in the literature,

but there is no evidence that these were carried beyond an experimental stage.²⁹ This is not surprising especially since the debate on theoretical aspects of "the law of value and price formation" continues unabated among Soviet theoreticians.³⁰

It is too early yet to fully assess the analytical and operational value of the 1959 intersectoral balance. By and large the layout and the structure of the balance, as well as the methods of its construction, follow closely the earlier Western models. The discussion of the merits and demerits of input-output techniques applied to a centrally planned economy, aside from involved and often obscure ideological issues, is not very revealing. In spite of the increasing volume of papers and monographs concerned with input-output in the U.S.S.R. the coverage is by no means comprehensive. Many technical details of construction of intersectoral models were never openly discussed. Some questions which occupy Western partisans of input-output analysis, such as the consequences of the linearity assumption, the problem of aggregation, the choice of prices, stability of input coefficients and the like, were not discussed in the Soviet literature or were dismissed in a few words. From the point of view of a Western observer the two most important shortcomings of the 1959 balance in rubles would be the employment of the official census classification of economic activities and the choice of purchaser's prices. It is quite clear that expediency considerations dictated the adoption of the existing sector classification and that production functions and distribution patterns of sectors were not seriously considered when the format and the degree of aggregation of the model were being discussed. The choice of purchaser's prices definitely reduces the predictive value of the model. This is of special importance in a Soviet model where purchaser's prices include trade and transportation charges as well as a significant addition (subject to erratic change) of the turnover tax. It may be noted, however, that recently several Soviet economists voiced criticism of the prices used and the entire balance was recomputed in terms of producer's prices.³¹

However, some points of Western criticism may not be relevant. Soviet framers of intersectoral balances view these as essentially tools of planning, and the 1959 balance was used as a basis for the subsequent planning balances. The question of stability of input coefficients (and hence the question of prices) is of lesser importance in ex-ante models in which input coefficients are largely given by government fiat.³²

N. Solov'ev in discussion, *Planovoe khoziaistvo*, No. 5, 1963, p. 23.

³² Thus a leading paper in the authoritative journal *Kommunist* states: "To become a tool of optimal planning an intersectoral balance must be based not on actual input coefficients but on scientifically determined progressive input coefficients." L. Al'ter, F. Krylov, and B. Miroshnichenko, *Kommunist*, No. 16, 1962, p. 75.

RECONSTRUCTION

The reconstruction of the entire balance was very tedious and drawn out. The end result of the reconstruction, the 38-sector flow table presented in appendix B, table 2, has, counting zeros, 1,520 entries out of which 994 were directly obtained from the Soviet published flows, and 526, or almost 35 percent, had to be estimated. Most estimates were made on the basis of published Soviet intersectoral data, but in some instances independently available Soviet statistical data was used. The accuracy of the estimates varies substantially, with some estimates being nothing but educated guesses and others being very close to the actual values. It may be noted that for about two-thirds of the estimates the margin of probable error can be determined; that is, the range into which the true value would fall can be specified.

It is next to impossible to summarize the process of estimating omitted values and of reconstructing the entire table, as this essentially amounted to a simultaneous solution of n equations with n unknown and as such defies comprehensive description.

The reconstruction was done in three stages. First, the entire balance was reconstructed in terms of six major aggregated branches; e.g., industry, agriculture, construction. Secondly, gross output, labor input coefficients, and total employment were estimated for some 70 sectors out of the original unabridged 83-sector table.³³ Most of the estimates of gross output values were made on the basis of the published segment of the first quadrant and published selected direct input coefficients.³⁴ Most of labor input coefficients were estimated by comparing the entries of the ruble balance with the entries of the "embodied labor" balance and were equally easily made.³⁵ Unfortunately, this straightforward method could not be applied to all gross output values and labor input coefficients which had to be estimated, and more elaborate and less accurate methods had to be used in a number of instances.

In the third stage of reconstruction the sectors which were aggregated for publication (such as metallurgy) were disaggregated and the values of omitted flows and totals were estimated. The latter constituted the most difficult part of the reconstruction and the margin of possible error is substantial. In addition to some intersectoral data, other Soviet statistics were used. Omissions appear to be great: comparing the published truncated segment of the first quadrant with the fully reconstructed table, we see that 6,431 million rubles, or approximately 4 percent of all interindustry flows were omitted.

³³ See Section A, tables 1 and 2.

³⁴ A direct input coefficient is defined as $a_{ij} = x_{ij}/X_j$ where x_{ij} is the input of commodity i into production of commodity j (or an entry of the flow table) and X_j is the gross output of sector j . With a_{ij} 's and x_{ij} 's available calculation of X_j 's is simple.

³⁵ The "embodied labor" flow table was prepared by simple multiplication of each row of the ruble table by the appropriate labor input coefficient c_i defined as $c_i = L_i/X_i$ where L_i is total employment and X_i gross output of sector i . Thus a division of any entry of the labor table by the appropriate entry of the ruble table would give us the value of the labor input coefficient.

TESTING THE ACCURACY OF THE RECONSTRUCTION

Two types of tests were applied to estimates obtained in the process of reconstruction. For lack of better terms, we can call them tests of consistency and tests of overall accuracy.

Tests of consistency were applied to individual estimates and groups of estimates whereby consistency with other intersectoral data or with independently available Soviet statistical data was ascertained. In a number of instances the same estimate could be made on the basis of more than one set of statistical data. In such cases the best set of data would be chosen for making the estimate (the criterion of choice being the number of statistically significant digits in available sets), and the estimate would then be checked against other sets of data. The second type of consistency tests used in this study involved comparison of various estimates made in the process of reconstruction with the independently available Soviet nonintersectoral data. This type of test was limited by the availability of Soviet data and, of course, by the fact that some of the available data was itself used in the making of the estimate. Furthermore, as was pointed out above, Soviet intersectoral data is not, strictly speaking, comparable with other statistical data because of prices used in the measurement of flows and adjustment made in the process of creating artificially "pure" sectors. While the margin of possible error varied greatly from estimate to estimate and not all estimates could be tested this way, these tests produced satisfactory results.

As contrasted with tests of consistency, which were applied to individual entries, tests of overall accuracy were applied to the entire reconstructed table. The general framework of these tests is as follows. There is the original unabridged Soviet flow table A , not available to us, and this study offers a reconstructed version of it, A_r . To establish some benchmark of error a test table A_s is constructed similar to A_r in all but one respect—a random error is introduced into one of the most important segments of the table, the vector of gross output. While the original complete Soviet table is not available, we do have a sample of certain coefficients and derived measures. The test then proceeds with a comparison of errors found between A_s and A_r on one hand, and A_r and A_s on the other.

Following the methodology developed in the reconstruction of the 38-sector table a 66-sector test table was constructed³⁶—the two tables differ only in the level of aggregation. Two additional test 66-sector tables were prepared with alternating ± 5 and 10 percent error injected into the gross output vector. The usual calculations made with input-output tables were performed with all three test tables: a matrix of direct input coefficients was calculated and its inverse of the $(I-A)^{-1}$ form was obtained; finally the vector of full labor coefficients was calculated by multiplying one row of direct labor inputs by the inverse.

The first of the two tests of overall accuracy dealt with coefficients. Different Soviet sources published, mainly for illustrative purposes, some 102 "full input coefficients," that is elements of the $(I-A)^{-1}$

³⁶ The test 66-sector tables are too large to be appended to this paper. They are available at Dr. John P. Hardt's office, Research Analysis Corp., McLean, Va.

inverse of the original 83-sector table. The 66-sector test table was prepared in such a way that for all these 102 coefficients, comparable coefficients would be available. The test consisted in comparing and determining the error first between the coefficients from the original Soviet and the reconstructed 66-sector table, and then between the coefficients from the original Soviet and the test ± 5 percent and ± 10 percent error tables. The results are shown in Table 3.

TABLE 3.—Average percent error found between 102 original Soviet inverse coefficients and inverse coefficients obtained from test tables

	Unweighted average error	Error weighted by the value of the coefficient
1. Soviet and the 66-sector table.....	3.00	1.62
2. Soviet and the test 66-sector table with alternating ± 5 percent error.....	6.29	4.76
3. Soviet and the test 66-sector table with alternating ± 10 percent error.....	10.70	8.63

It must be noted that this test cannot be considered an ultimate proof of the "correctness" of our reconstructed tables and estimates, nor does this test offer a rigorously defined quantitative measure of the overall error. Nevertheless the average errors shown in the table above definitely indicate that the overall error in the reconstruction is probably rather small.

The second test of overall accuracy in which the test 66-sector table was used was as follows. One Soviet source analyzing the 1959 intersectoral balance and its inverse introduced three derived measures. Without going into the economic meaning of these measures, they can simply be listed, using Soviet terms:

1. "The coefficient of gross output" defined as

$$k_1 = \sum_{i=1}^n r_{ij} \quad (j=1, 2, 3 \dots n)$$

where r_{ij} stands for elements of the inverse.

2. "The coefficient of doublecounting" defined as

$$k_2 = \left(\sum_{i=1}^n r_{ij} - 1 \right) : \left(\sum_{i=1}^n a_{ij} \right) \quad (j=1, 2, 3 \dots n)$$

where a_{ij} stands for elements of the table of flow coefficients.

3. "The coefficient of full labor utilization" defined as

$$k_3 = \sum_{i=1}^n c_i \cdot r_{ij} \quad (j=1, 2, 3 \dots n)$$

where c_i stand for labor input coefficient.

The actual values of these three coefficients for 13 aggregated Soviet industries were published.³⁷ Using the 66-sector test table, comparable coefficients were computed for the 13 industries and compared with the original Soviet coefficients. Under the circumstances the best method of comparing the Soviet and our sets of coefficients was chosen to be Kendall's rank correlation test. The rank correlation coefficients for the three sets of *k*'s were calculated to be respectively +0.82, +0.82, and +0.68; all coefficients were significant on a 0.01 probability level. Thus, similarly to the results of the tests with coefficients, the test of overall accuracy applied to derived measures shows a high degree of agreement between Soviet data and data from the reconstructed 66-sector table.

Supplementary Tables—Section A

TABLE A-1.—Gross output of selected sectors, 1959 intersectoral balance

(In millions of rubles)

Sector code No.	Sector designation	Gross output
1	Ferrous ores.....	582.1
2	Ferrous metals.....	6,470.0
3	Coke chemistry.....	1,351.7
4	Refractory materials.....	228.6
5	Industrial metal products.....	747.6
6	Nonferrous ores.....	827.5
7	Nonferrous metals.....	3,830.0

1 Not available.

NOTES

Sector code number refers to the original unabridged 83-sector table.

All figures are in 1959 purchaser's prices. Gross output of industry (sectors 1 through 73) is defined following the Soviet so-called plant method (zavodskoi metod) as the value of all finished products produced in a given period. Both shipments outside the enterprise and changes in inventories of finished goods are included. Changes in inventories of unfinished products is included as an exception in some machine-building plants. Intraplant turnover is as a rule excluded but there are some exceptions (textile and food industry sectors). Gross output of construction is defined as the value of all finished construction projects, changes in unfinished projects and capital repair and improvements of buildings and structures. Gross output of agriculture includes all shipments outside of agricultural units (kolkhoz, sovkhoz, etc.) as well as all internal turnover. Gross output of forestry, freight transportation, communications serving production, and other branches of material production is defined as gross revenue of these sectors. Gross output of trade and distribution organizations is defined total cost of conducting trade activities (izderzhki obrashcheniia) less transportation expenses plus the realized profit margin.

NOTES

In the framework of an intersectoral balance employment is defined as total employment (i.e., productive workers, engineering supervisory, and clerical personnel and apprentices), expressed in man-years and averaged for the year. It will be noted that the industrial employment coverage used in the balance is broader than the coverage shown in Soviet statistical yearbooks. In addition to workers and other employees of state industrial enterprises the employment figure shown in the balance includes members of producer cooperatives (artel') and those employed in small-scale industrial shops such as collective farm flour mills or blacksmith shops. As was noted in the text the balance is showing sectors and branches adjusted to represent homogeneous output with the production of all auxiliary and secondary products removed.

2	Ferrous metals.....	Ferrous metals.....	(1)	2
3	Nonferrous ores.....	Nonferrous ores.....	(1)	6
4	Nonferrous metals.....	Nonferrous metals.....	(1)	7
5	Coking chemistry.....	Coking coal and coking chemistry products.....	2	3
6	Metal products.....	Industrial metal products and refractory materials.....	3-4	4-5
7	Coal.....	Coal.....	5	8
8	Oil.....	Oil extraction and oil processing.....	6-7	9-10
9	Gas.....	Gas.....	8	11
10	Other fuels.....	Peat, oil shales, other fuels.....	9-11	12-14
11	Electrical power.....	Electrical and thermal power.....	12	15
12	Electrical and power machinery and equipment.....	Boilers, turbines, diesel and steam engines, electrical machinery, equipment, and appliances.....	13-14	16-17
13	Tools and instruments.....	Cable products, tools and instruments, industrial instruments, household durables, roll bearings.....	15, 19-21, 34	18, 23-25, 38
14	Machinery and equipment.....	Machine tools, forging and pressing equipment, casting equipment; machinery and equipment for mining, metallurgical, chemical, woodworking, paper, light, food and printing industries; hoisting and transporting equipment, construction machinery and equipment, machinery and equipment for construction materials industry.....	16-18, 22-30	20-22, 20-34
15	Transportation machinery and equipment.....	Machinery and equipment of railroads; shipbuilding, aircraft production.....	31	35
16	Automobiles.....	Automobiles.....	32	36
17	Agriculture machinery and equipment.....	Tractors and other agricultural machinery and equipment.....	33	37
18	Machinery not elsewhere classified.....	Radioelectronics and other machinery and equipment not elsewhere classified.....	None	19, 39
19	Metalworking.....	Sanitary engineering equipment, other metalwares and products, metal frames and structures.....	35-37	40-42
20	Repair of all machinery and equipment.....	Repair of all machinery and equipment.....	38	43
21	Abrasives and graphite.....	Abrasives and graphite products.....	39	44
22	Mineral and basic chemistry.....	Mineral and basic chemistry products.....	40-41	45-46
23	Other chemical products.....	Aniline dyes, synthetic resins and plastics, synthetic fibers, other organic synthetic products, paints and lacquers, synthetic rubber and chemicals not elsewhere classified.....	42-46, 48	47-52, 50, 54
24	Rubber products.....	Rubber and asbestos products.....	47	53
25	Woodworking.....	Logging and timber, lumber and woodworking, furniture, matches and other wood products, not elsewhere classified, forest chemistry products.....	49-52, 54	55-58, 60
26	Paper.....	Paper.....	53	59
27	Construction materials.....	Construction materials.....	55	61
28	Glass.....	Glass and porcelain-faience.....	56	62
29	Textiles.....	Textiles.....	57	63
30	Apparel, footwear.....	Apparel, sewn goods, footwear, tanner and fur products.....	58-59	64-65
31	Food.....	Fish, meat, milk and dairy products, sugar, flour, bread and bakery products, tobacco products, all beverages and all food not elsewhere classified.....	60-65	66-72
32	Industrial products.....	Industrial products not elsewhere classified: toys, musical instruments, printing, etc.....	None	73

¹Part of 1.

TABLE B-1.—*Sector classification*—Continued

Sector code No.	Sector designation	Description	Including sectors numbered	
			As published	Full
33	Construction.....	Construction.....	66	74
34	Agriculture.....	Crops and animal husbandry.....	68-69	75-76
35	Forestry.....	Forestry.....	70	77
36	Transport and communications.	Transportation and communications.....	71	78-79
37	Trade and distribution.	Trade and public dining, procurement of agricultural products, supply and distribution services.	72	80-82
38	Other sectors not elsewhere classified.	Metal scrap, publishing, noncommercial fishing and hunting, etc.	73	83

NOTES

Sector numbers "As published" refer to the published 73-sector segment of quadrant I.
Sector numbers designated as "Full" refer to the original, unabridged 83-sector flow table.

TABLE B-2.—THE 1959 SOVIET INTERSECTORAL BALANCE (RECONSTRUCTED)

APPENDIX 2
OFFICIAL SOVIET ECONOMIC DATA FOR 1963
Excerpted from the Annual
“Communique of the Central Statistical Administration
of the Council of Ministers of the U.S.S.R.”
[*Pravda*, January 24, 1964]

TABLE 1.—*Industry—Production of principal commodities*

Commodity	Unit	Produced in 1963	Percent of 1962
Electric power.....	Billion kilowatt-hours.....	412.0	112
Steel.....	Million metric tons.....	80.2	105
Iron ore.....	do.....	137.0	107
Petroleum, crude.....	do.....	206.0	111
Coal.....	do.....	532.0	103
Cement.....	do.....	61.0	106
Timber, hauled.....	Million cubic meters.....	253.0	104
Paper.....	Million metric tons.....	2.9	104
Turbines.....	Million kilowatts.....	11.9	100
Machine tools, metal-cutting.....	Thousand units.....	183.0	103
Machine tools, metal-forming.....	do.....	33.8	101
Metallurgical equipment.....	Thousand metric tons.....	236.0	98
Petroleum equipment.....	do.....	115.0	95
Chemical equipment.....	Million rubles.....	287.0	109
Weaving looms.....	Thousand units.....	24.1	105
Autos and trucks.....	do.....	587.0	102
Tractors.....	do.....	325.0	113
Farm machinery.....	Million rubles.....	1,371.0	117
Excavators.....	Thousand units.....	17.9	104
Fertilizers, mineral.....	Million metric tons.....	19.9	115
Manmade fibers.....	Thousand metric tons.....	308.0	111
Soda, caustic.....	do.....	1,049.0	109
Soda ash.....	do.....	2,500.0	109
Sulfuric acid.....	do.....	6,887.0	112
Automobile tires.....	Million units.....	22.6	108
Fabrics:			
Cotton.....	Million square meters.....	5,069.0	103
Wool.....	do.....	471.0	100
Linen.....	do.....	509.0	105
Silk.....	do.....	801.0	102
Shoes, leather.....	Million pairs.....	463.0	101
Watches and clocks.....	Million units.....	27.1	104
Radio sets.....	do.....	4.8	113
Television sets.....	do.....	2.5	114
Refrigerators.....	Thousand units.....	911.0	109
Washing machines.....	do.....	2,300.0	127
Meat:			
Slaughtered weight.....	Million metric tons.....	10.2	107
Factory-produced only.....	do.....	5.4	113
Fish catch.....	do.....	4.7	112
Butter.....	Thousand metric tons.....	874.0	93
Cheese.....	do.....	222.0	107
Whole milk products.....	Million metric tons.....	9.5	102
Granulated sugar, beet.....	do.....	5.5	93
Vegetable oils.....	do.....	2.1	105
Soap.....	do.....	1.8	108
Canned goods.....	Billion standard cans.....	6.4	108

TABLE 2.—Agriculture

Indicator	Unit	1962	1963
PRODUCTION			
Meat, slaughtered weight.....	Million metric tons.....	9.5	10.2
Milk.....	do.....	63.9	61.2
Eggs.....	Billions.....	30.1	28.8
PROCUREMENT			
Government procurement:			
Grain.....	Million metric tons.....	56.6	44.8
Cotton, raw.....	do.....	4.3	5.2
Sugar, beet.....	do.....	3.9	41.4
Potatoes.....	do.....	5.7	8.0
Livestock, slaughtered weight.....	do.....	5.3	5.6
Milk.....	do.....	29.2	28.5
Eggs.....	Billions.....	8.5	8.7
Wool.....	Thousand metric tons.....	374	379
LIVESTOCK			
Livestock numbers (end of year):			
Large horned cattle.....	Million heads.....	87.0	85.3
Cows.....	do.....	38.0	38.2
Hogs.....	do.....	70.0	49.7
Sheep and goats.....	do.....	146.4	139.2
Sheep.....	do.....	139.7	133.6

TABLE 3.—Transport

Indicator	Unit	1963	Percent of 1962
Freight carried:			
Railroad.....	Billion ton-kilometers.....	1,745	106
River.....	do.....	114	104
Sea.....	do.....	130	130
Truck.....	do.....	34	108
Oil pipeline.....	do.....	91	122
Freight originated:			
Railroad.....	Million metric tons.....	2,144	104
River.....	do.....	239	104
Sea.....	do.....	112	112
Truck.....	do.....	2,012	104
Oil pipelines.....	do.....	185	112

TABLE 4.—Other economic indicators for 1963

Population, as of Jan. 1, 1964.....	226,000,000 (223,100,000 Jan. 1, 1963).
Number of workers and employees, yearly average.....	70,500,000 (68,300,000 in 1962).
Gross social product ¹	Increased by 5 percent over 1962 (by 39 percent over 1958).
Retail trade sales.....	91,600,000,000 rubles (5 percent over 1962).
Foreign trade turnover (exports plus imports).....	12,700,000,000 rubles (5 percent over 1962).
New housing (total space).....	77,000,000 square meters (80,500,000 in 1962) or about 2,000,000 apartments.
Number of school graduates:	
Elementary (8 years).....	3,000,000.
Secondary, general (11 years).....	900,000.
Secondary, specialized.....	510,000.
Higher education.....	330,000.
Engineers.....	125,000.

¹ For 1962 and preceding years, the annual communique used the indicator "National income" rather than "Gross social product" as a measure of the total national product. It also provided an absolute figure for "National income," namely 161,500,000,000 rubles (later revised to 165,100,000,000 rubles in *Nar. Khoz.*, 1963 (p. 482)).
